ZYLVOO / PORTFOLIO

SignalDesk

Lead Intelligence & CRM Automation

A connected revenue-operations workspace: qualification, accounts, pipeline, tasks, approvals and automation design.

16 application views

Standalone interactive frontend

Independent product concept / Functional browser preview

Synthetic company names, records and illustrative metrics.

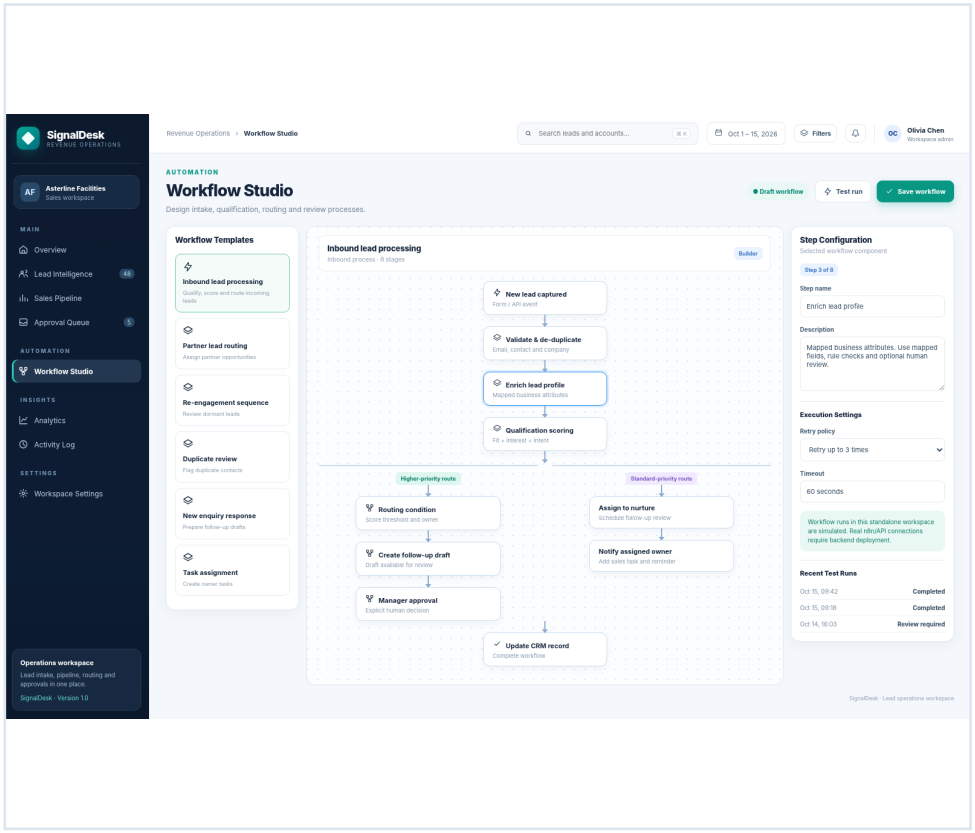

Scope & product architecture

Business challenge

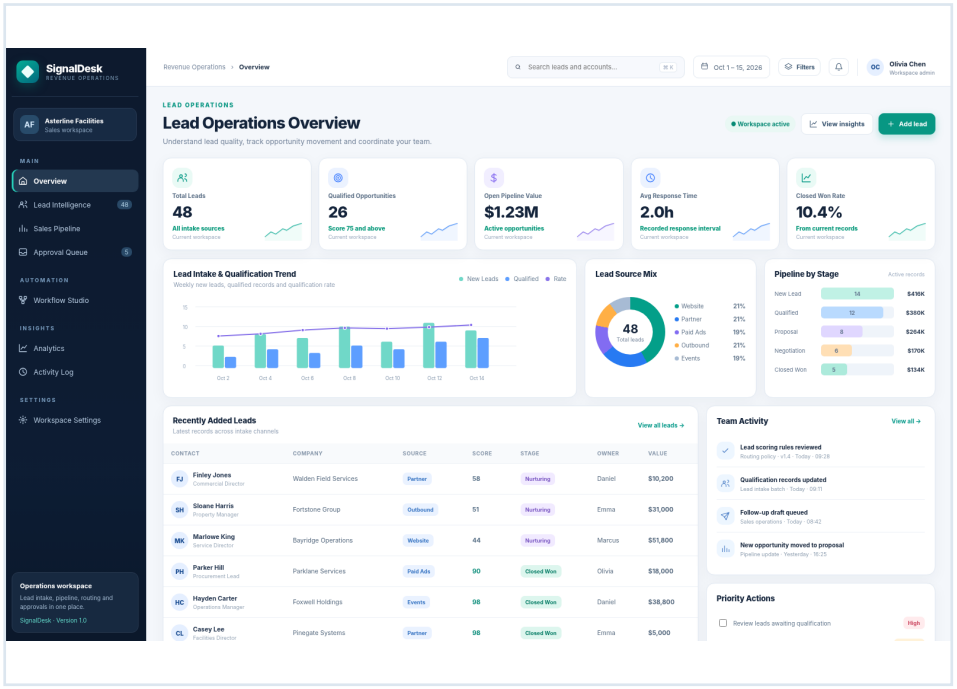

Sales operations teams often work across separate tools to capture inquiries, qualify accounts, coordinate follow-ups and track ownership. SignalDesk demonstrates a unified information architecture for those activities.

Solution capabilities

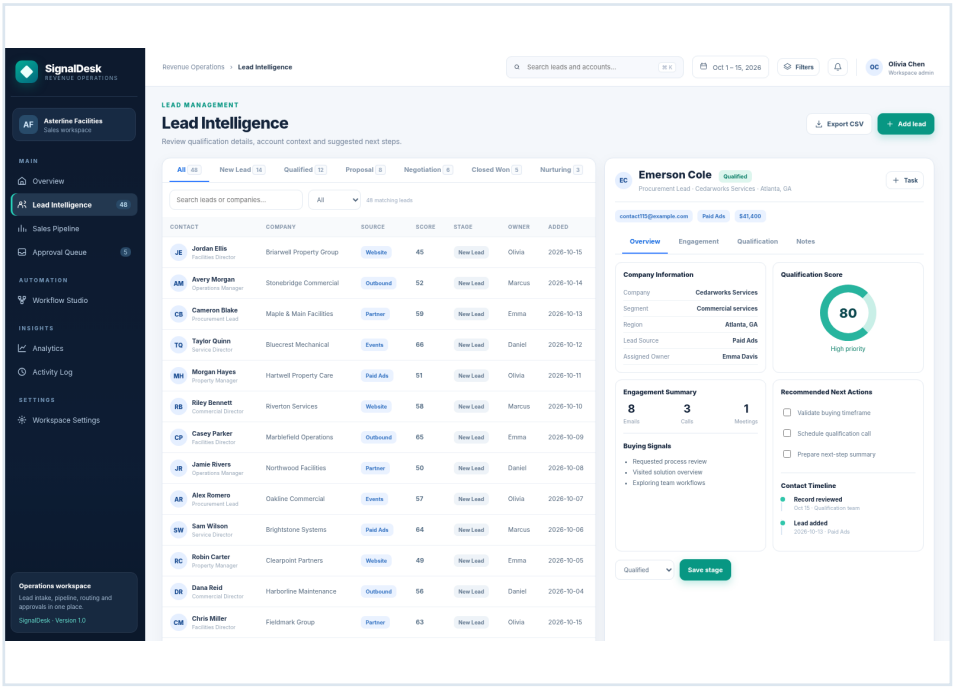

- Lead intake, qualification and account overview
- Sales pipeline and owner assignments
- Workflow diagram and approval queue
- Contacts, companies and task scheduling
- Message templates, notifications and integrations
- Reports, audit history and workspace controls

Executive overview & lead qualification

Operations overview

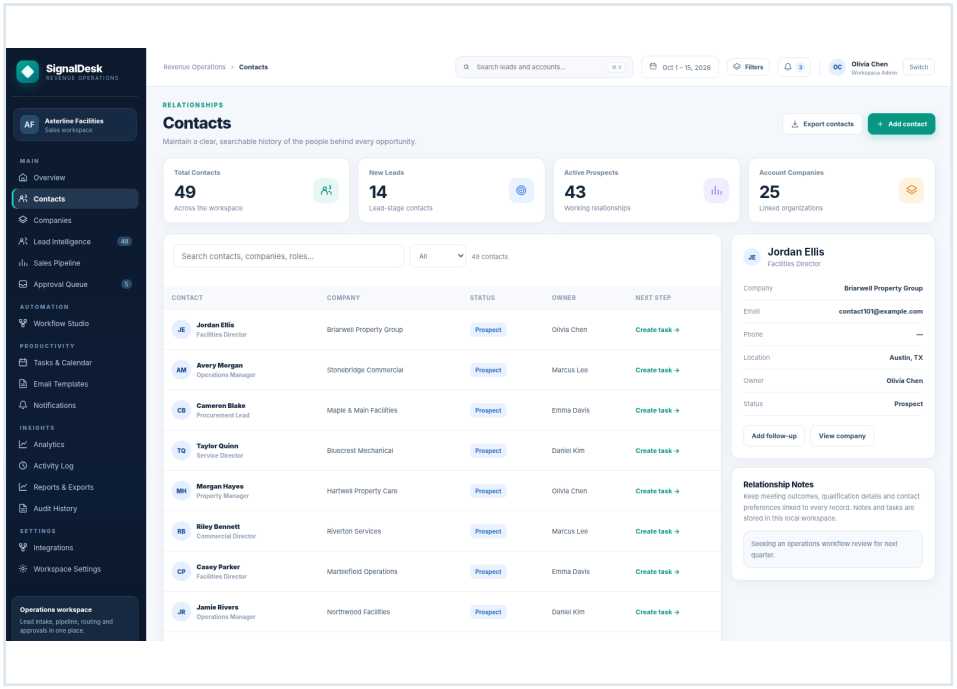

Lead profile review

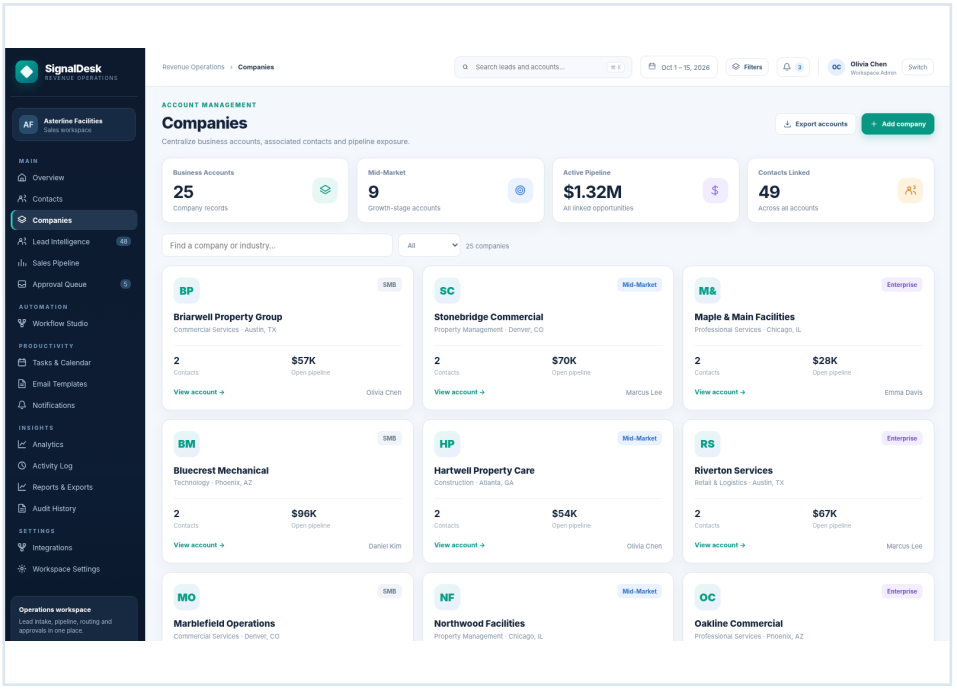

WHAT THIS DEMONSTRATES

The executive workspace presents KPI summaries, conversion visibility, source distribution and recent changes. Qualification views bring account context, lead scoring, activities and next steps together.

Contacts & company accounts

Contact directory

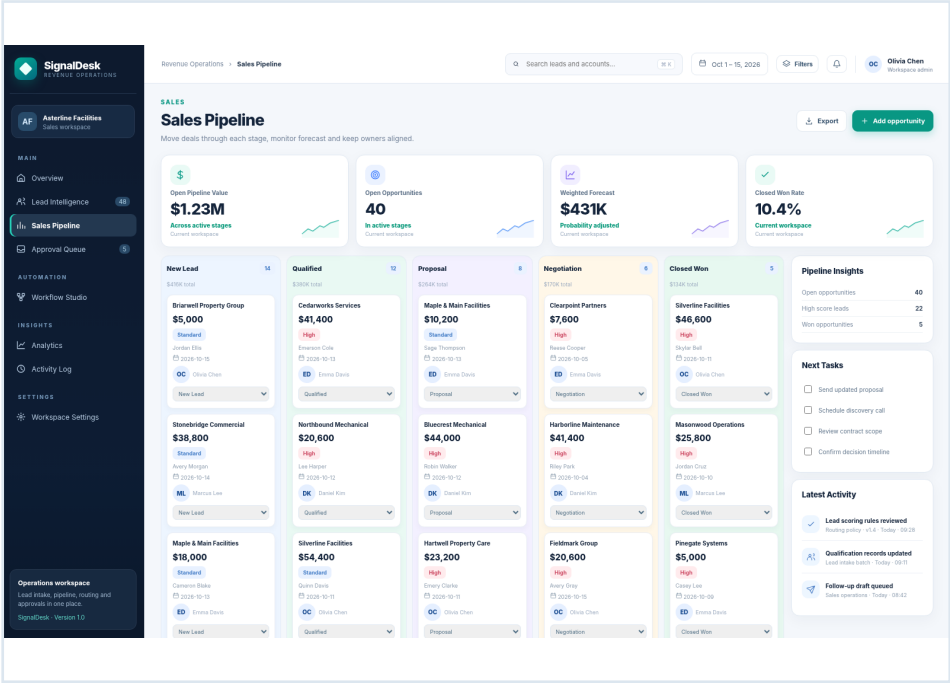

Company account management

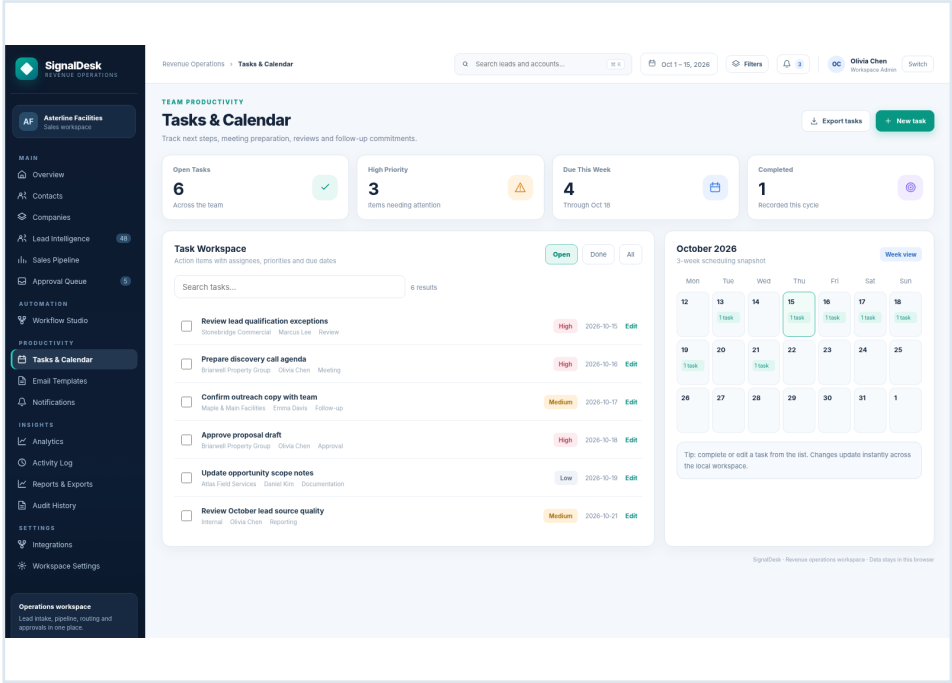

WHAT THIS DEMONSTRATES

Contact records are searchable, connected to company accounts and able to generate follow-up tasks. Company views consolidate industry segment, account owner and related pipeline values.

Pipeline & work management

Stage-based opportunity board

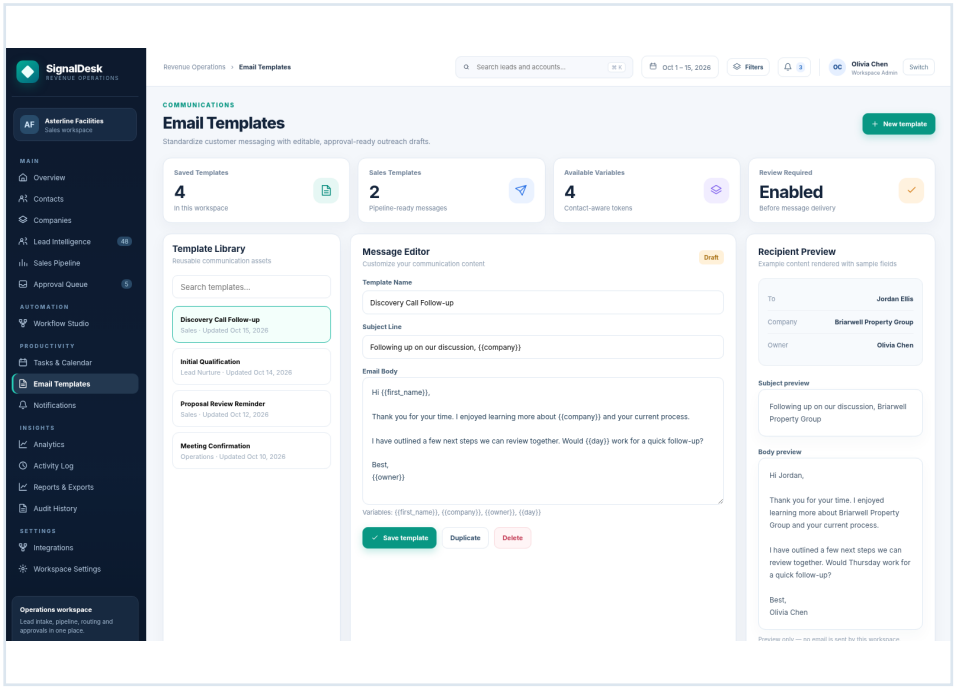

Task list and calendar

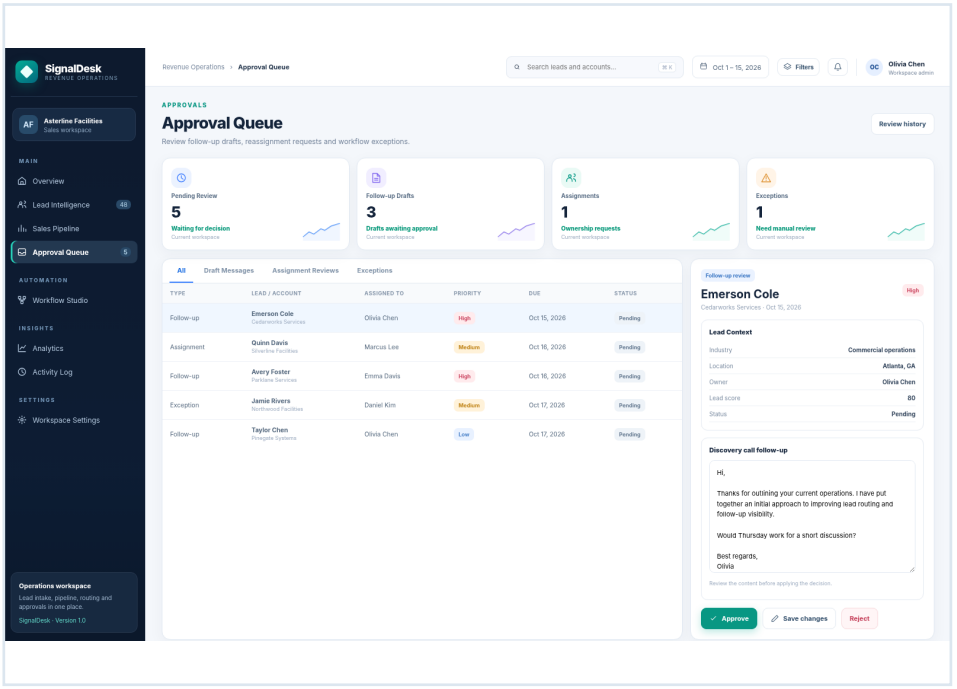

WHAT THIS DEMONSTRATES

The opportunity board supports stage updates. Tasks include assignees, priority, dates and completion state; completed actions can be tracked through audit history.

Messaging & review controls

Template editor and preview

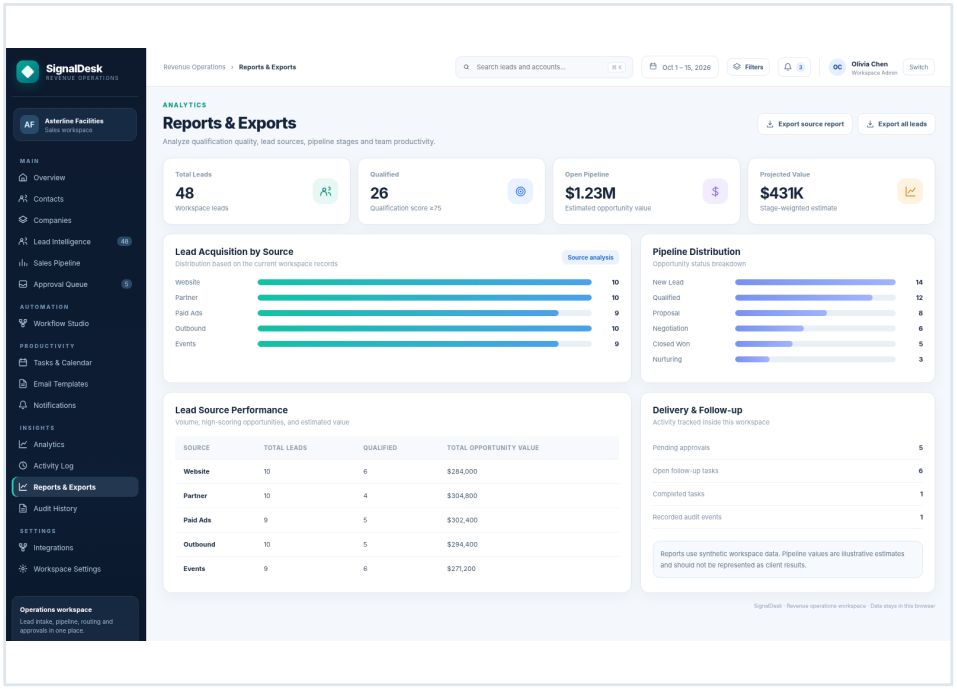

Approval queue

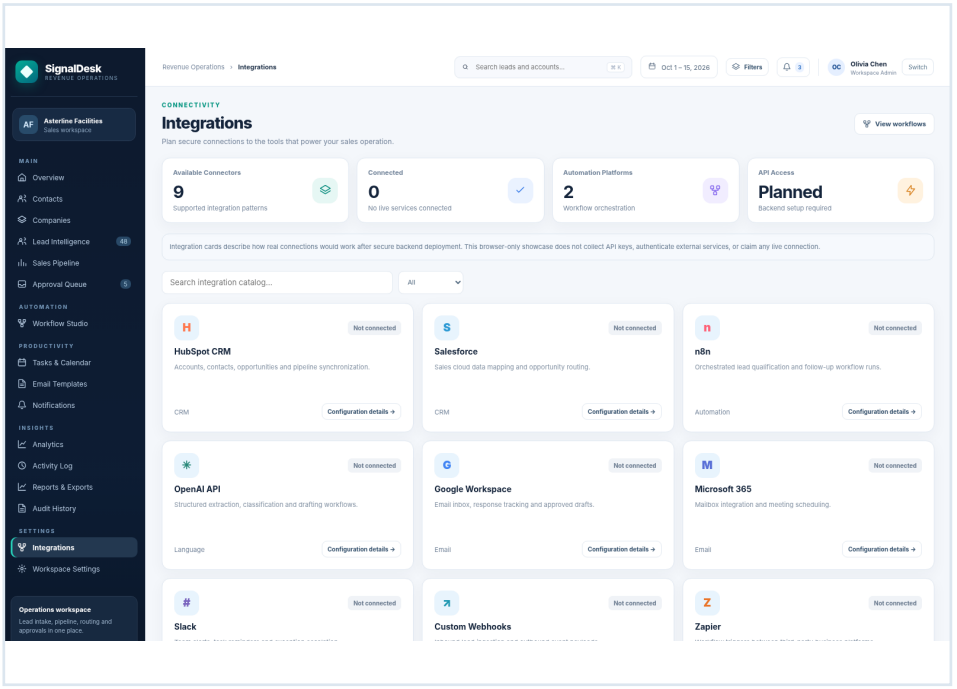

WHAT THIS DEMONSTRATES

Editable templates support personalized preview variables. The approval queue records local draft review and decision actions without actually sending external email.

Reporting & integrations

Analytics and CSV reports

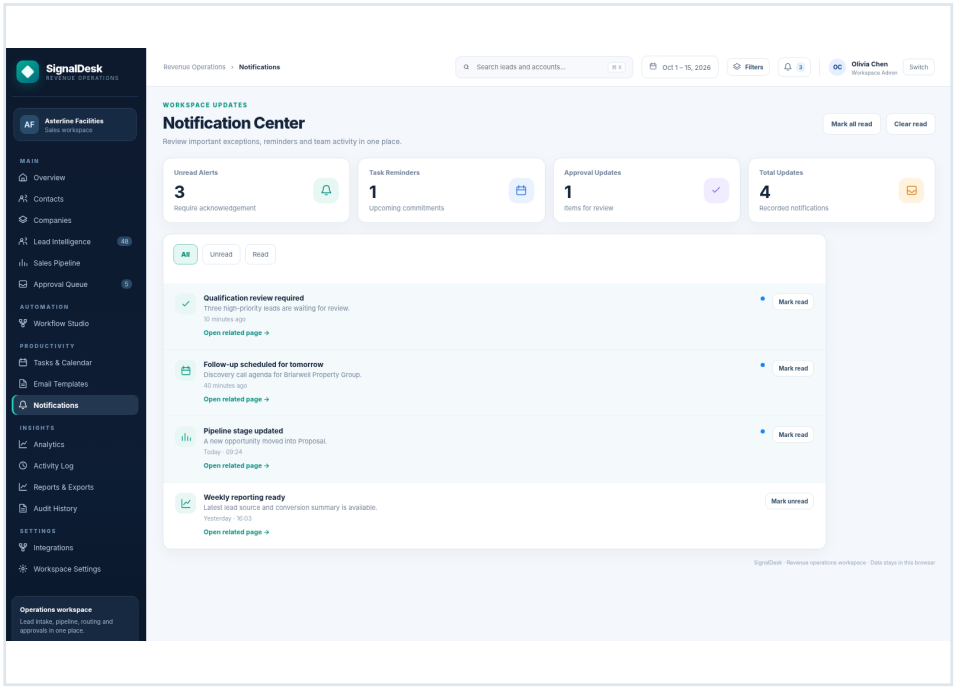

Integration catalog

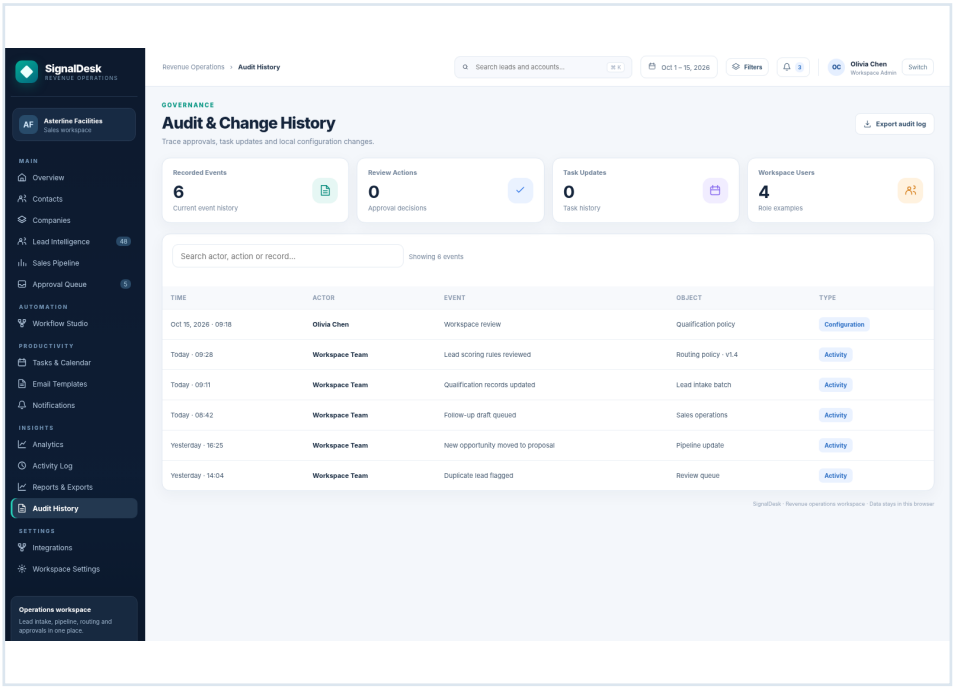

WHAT THIS DEMONSTRATES

Source and pipeline reports are derived from local sample data. The integration catalog explains intended CRM, orchestration and email connectors without storing secrets or claiming live external connections.

Notifications & governance

Workspace notification center

Audit history

WHAT THIS DEMONSTRATES

Notifications can be acknowledged and inspected. Audit history records significant user actions and preference updates to create a transparent local event trail.
