KORVA

INVOICE INTELLIGENCE

Smarter invoice operations.

Invoice review / approvals / AP control

- 17 interactive workspace modules
- 76 fictional invoice records
- 4 new financial-control workspaces

The problem behind the paperwork

An accounts payable workflow designed around speed without skipping human checks.

COMMON AP FRICTION

- Invoices arrive from multiple sources
- Fields must be checked against purchase orders
- Approvers need context, not another spreadsheet
- Finance needs a clear audit and export trail

DESIGN RESPONSE

One workspace for review and routing

Human approvals and visible exceptions

Connected financial views (simulated)

Transparent local data and export workflows

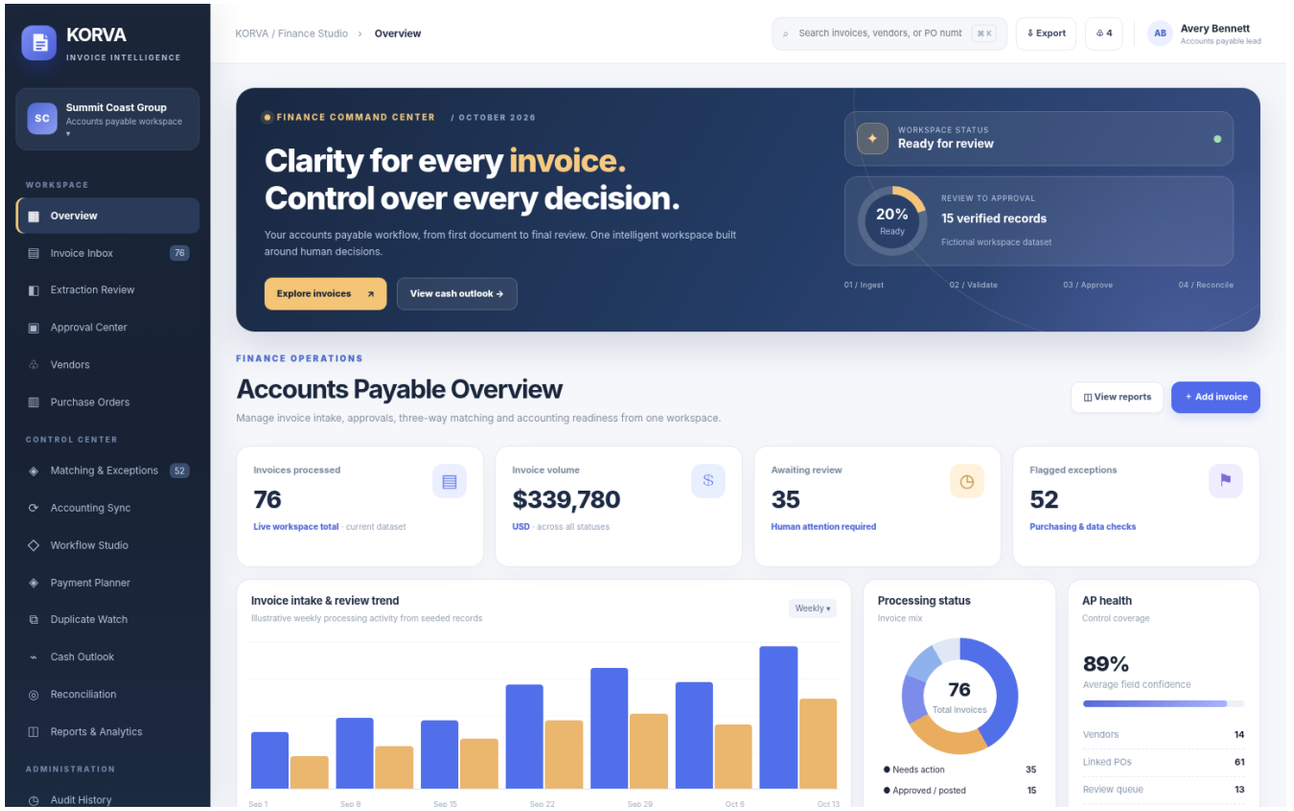

17 INTERACTIVE VIEWS

76 SAMPLE INVOICES

4 NEW AP CONTROLS

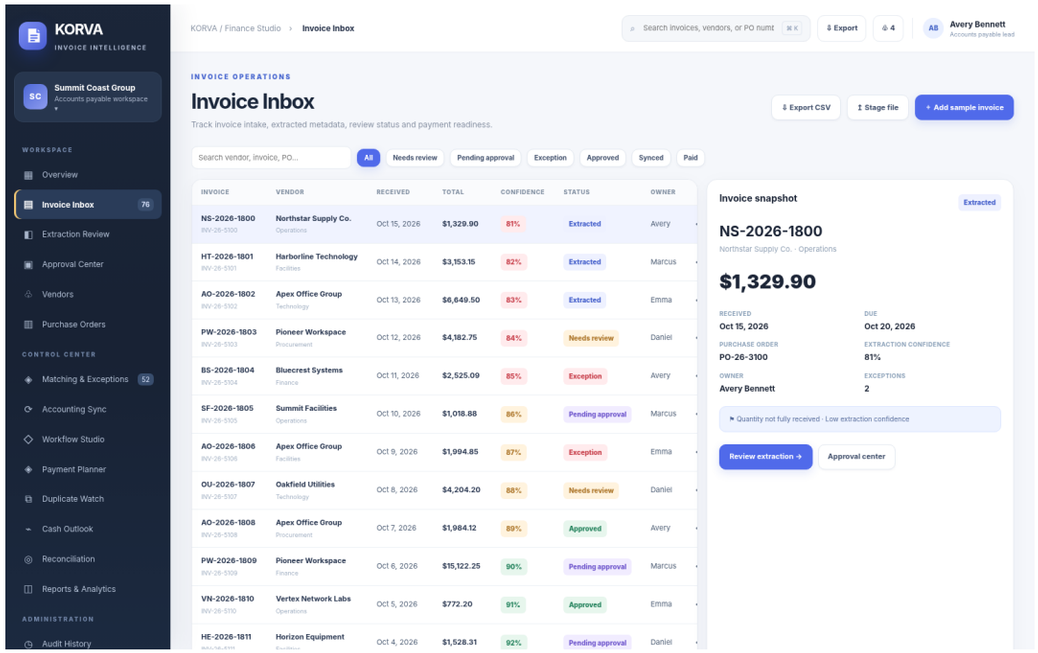

An overview built for decisions

Overview with review queues, transaction volume, exceptions and activity trends.

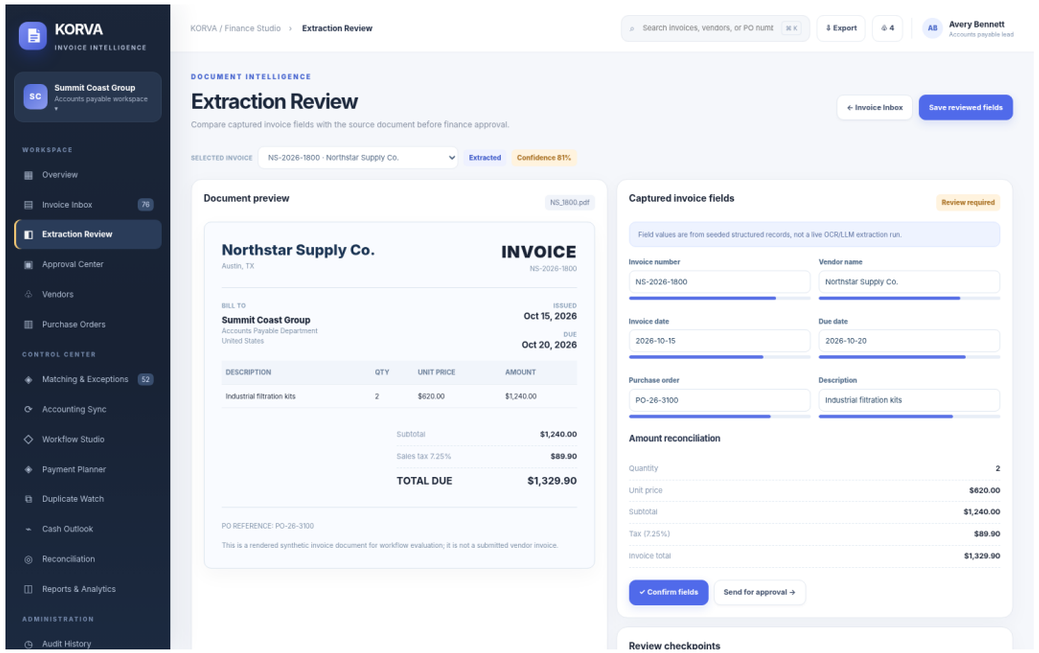

Invoice intake & field review

The invoice lifecycle starts with intake, document checks, and an editable extraction review.

01 INTAKE + SEARCH

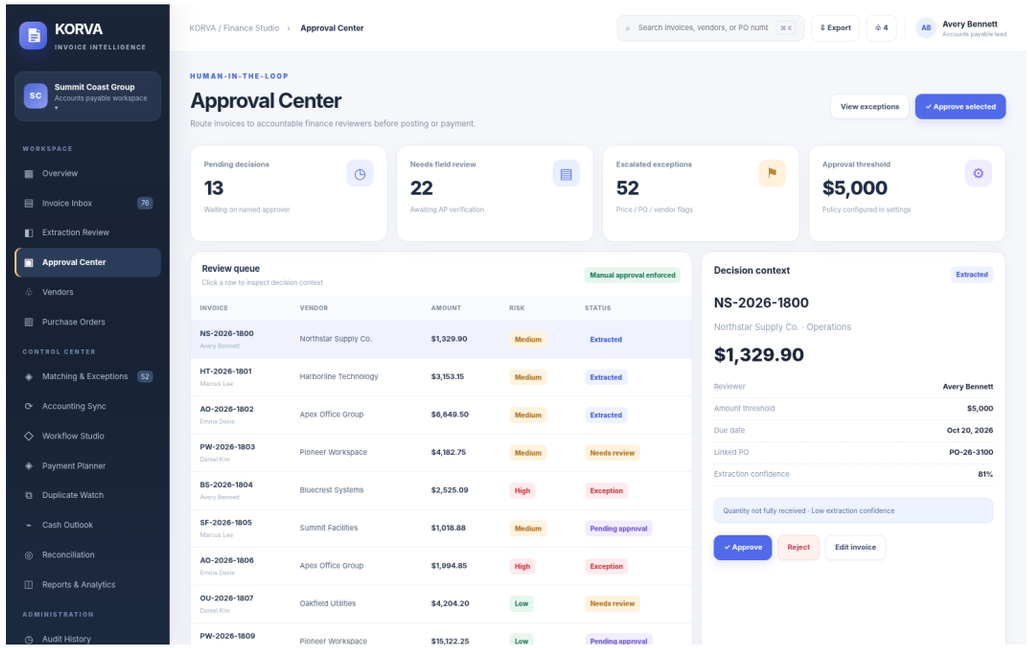

02 HUMAN EXTRACTION REVIEW

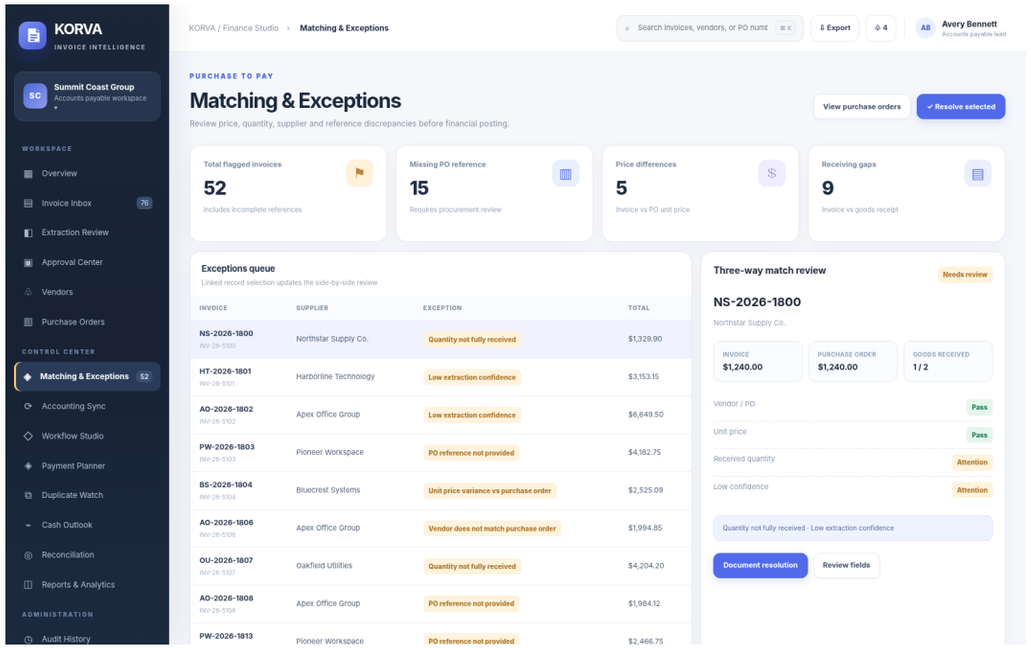

Local sample fields mimic extraction outputs; live OCR and model inference are not connected.

Controls that finance teams can use

Human decisions, purchase-order comparison and exception rationale remain visible.

APPROVAL WORKSPACE

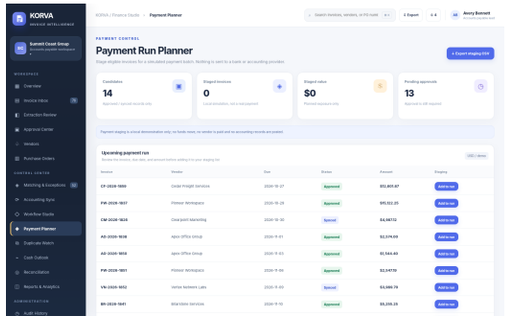

MATCHING & EXCEPTIONS

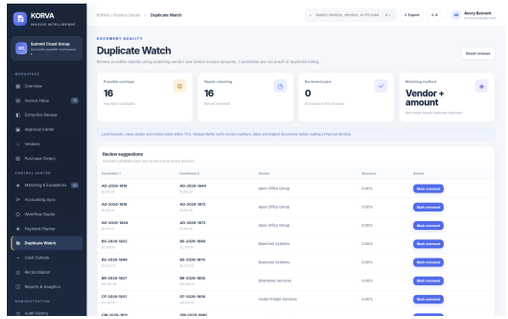

A human approval is recorded only in the prototype. It does not issue money or change an external accounting ledger.

Four new financial-control modules

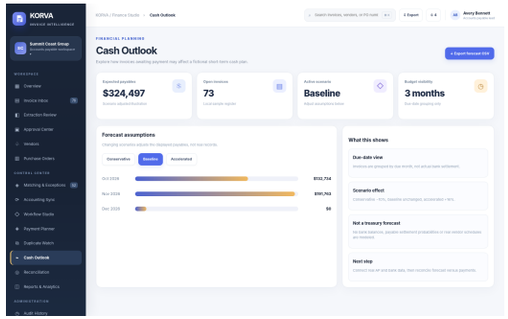

Practical additions that give the original 13-module workflow more depth.

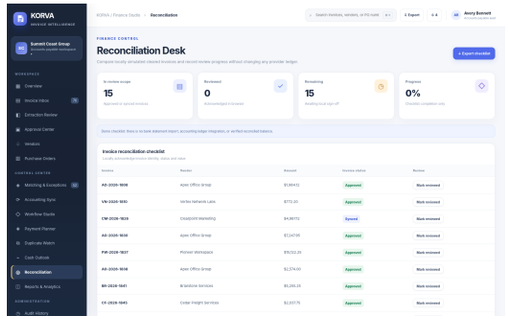

01 PAYMENT RUN PLANNER

02 DUPLICATE WATCH

03 CASH OUTLOOK

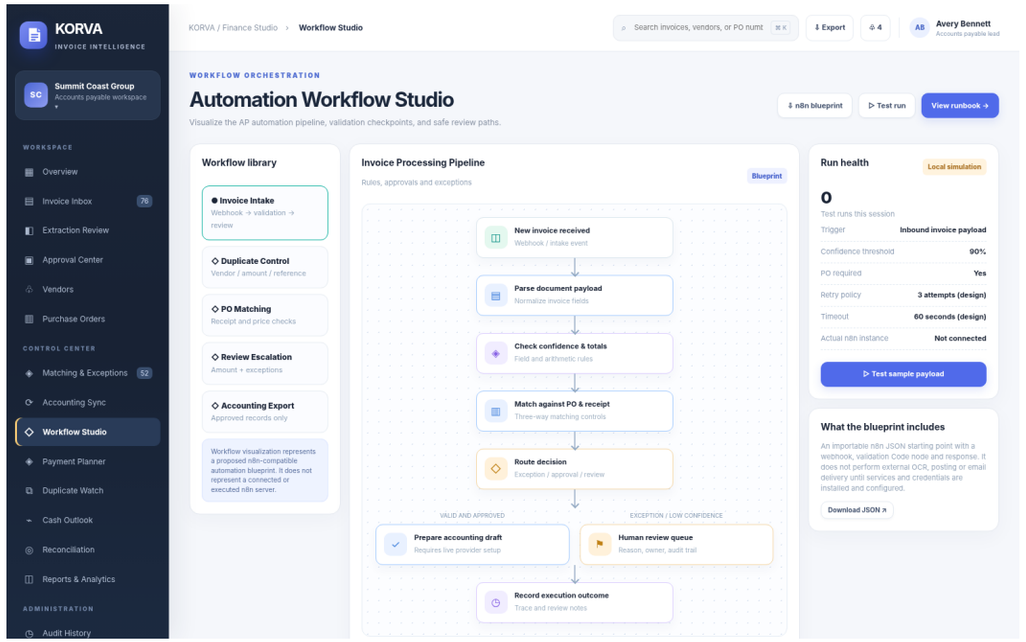

04 RECONCILIATION DESK

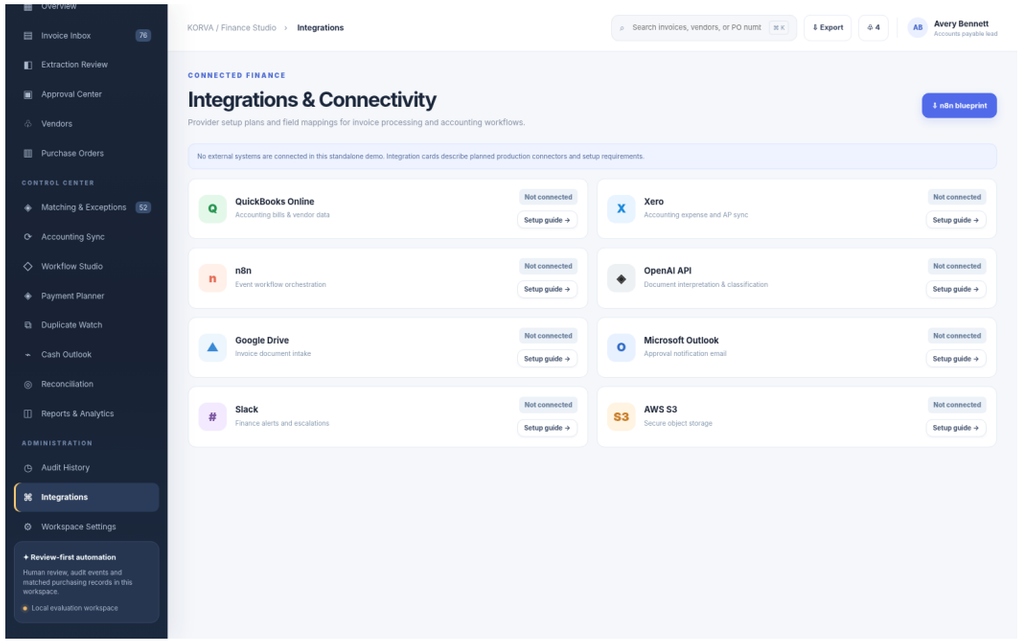

Each new module runs locally with fictional records. Similarity matches and cash scenarios are decision aids, not financial verification.

Workflow logic & integration planning

Business rules, human approvals and accounting integration are intentionally separated.

WORKFLOW DESIGNER

PROVIDER INTEGRATION ROADMAP

Blueprint JSON is a starter reference only. QuickBooks, Xero, Outlook, Slack, n8n and OpenAI are not connected.

Designed to support real work

A consistent visual language and verified interactive workflow for a credible portfolio demonstration.

DESIGN SYSTEM

Graphite | Royal blue | Soft gold | Paper

Navigation, KPI cards, table density, badges and action states are designed to work together across 17 views.

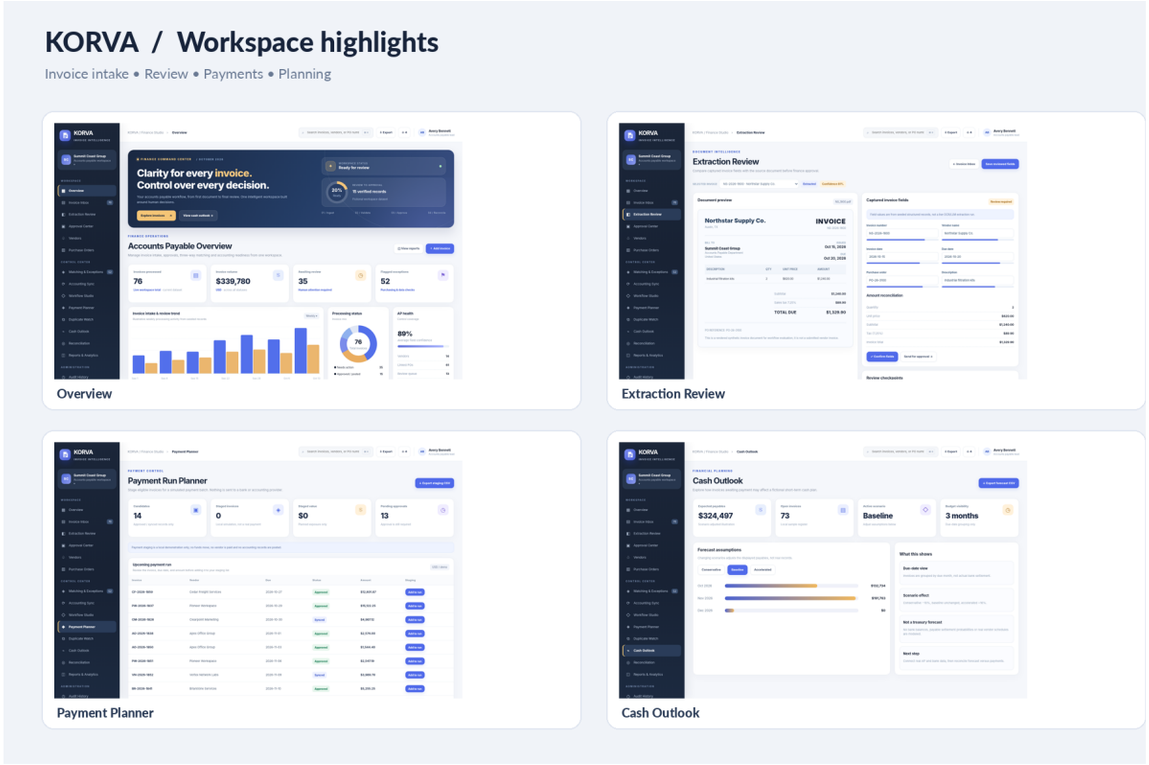

BROWSER QA

- 17/17 sections loaded without JS errors
- Invoice creation and human review flows
- Payment staging + duplicate candidate review
- Forecast switching + checklist actions

What is deliberately out of scope

Live OCR, LLM extraction, connected finance systems, real payments, identity management, immutable audit logs, and bank reconciliation are not implemented in this portfolio prototype.

A concept built to communicate capability

WHAT TO SHARE

01 Upwork cover

02 Overview screen

03 Field extraction review

04 Matching + exceptions

05 Payment planner

06 Short case study

Local source and synthetic sample data are included for testing. A production deployment would need secure APIs, role-based access, data controls and thorough accounting validation.
