BROWSER-BASED RECEPTION WORKSPACE

THE IDEA

The challenge & concept

Service businesses need better handoffs, not more missed conversations.

01 / CALL INTAKE

A missed call can mean an unresolved question or a booking opportunity.

02 / STAFF FOLLOW-UP

Reception teams need customer context and clear ownership.

03 / APPOINTMENT CLARITY

Scheduling requires availability checks and simple confirmations.

THE DESIGN RESPONSE

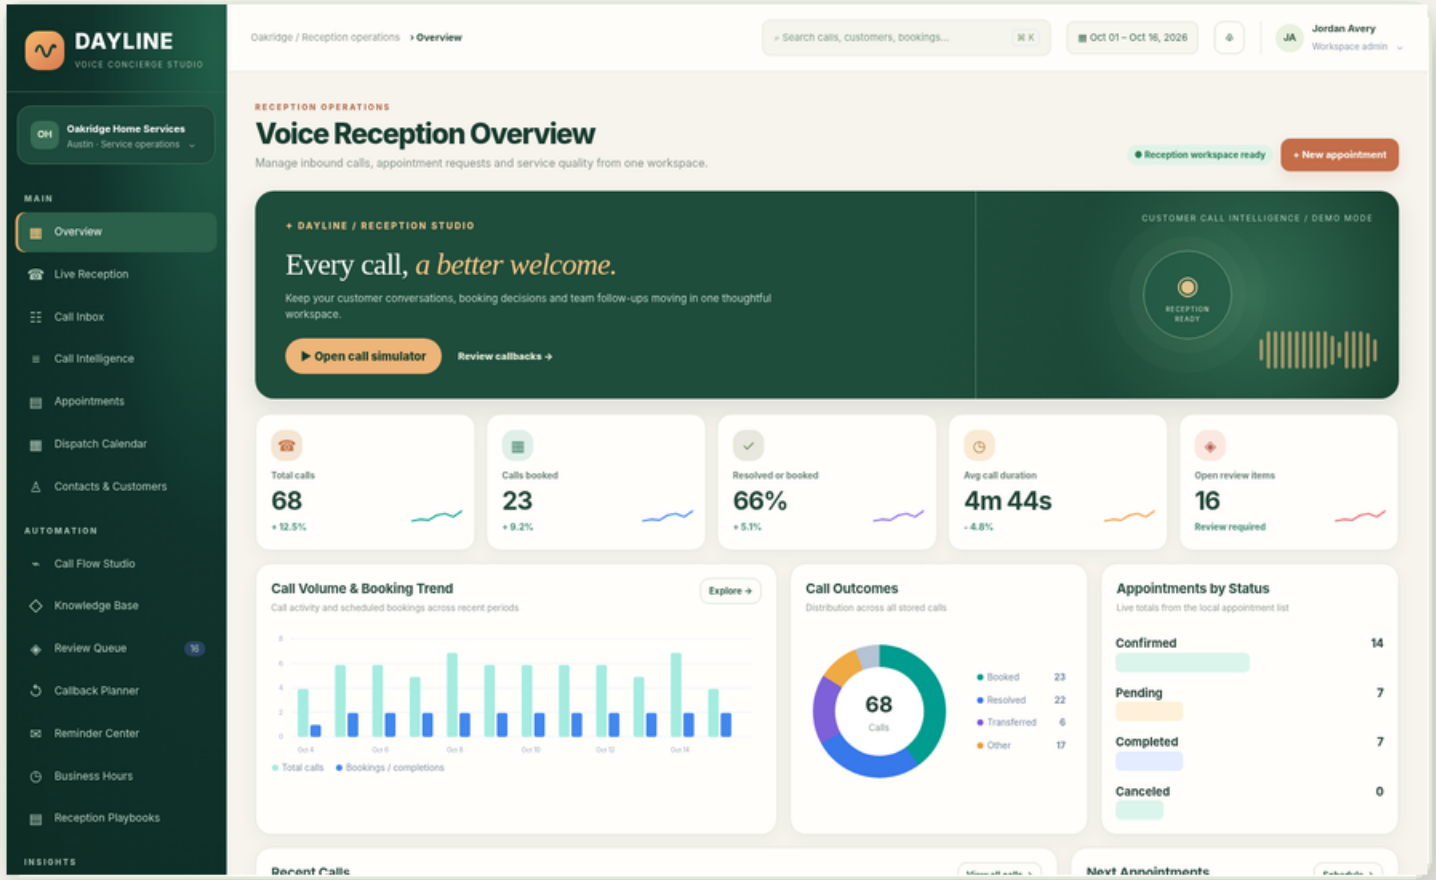

One workspace for voice, bookings, and follow-through.

Customer context → Local call scenario → Booking review → Staff action

DESKTOP / HOME

A clear command center

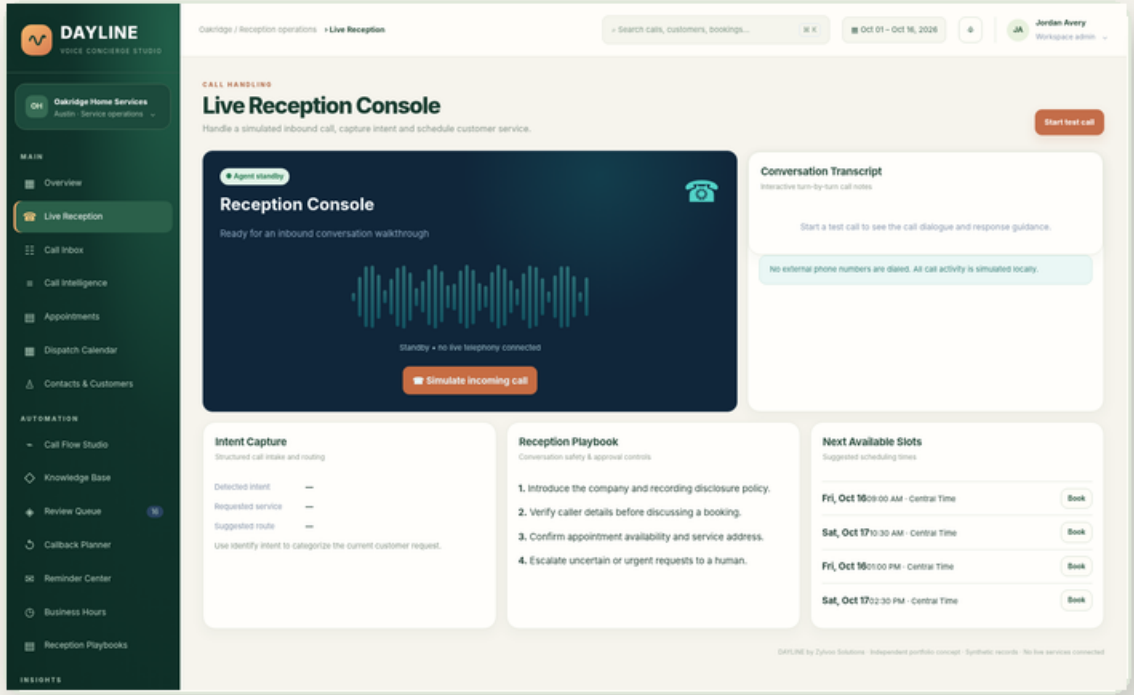

Call volume, booking activity and what the team needs to review next.

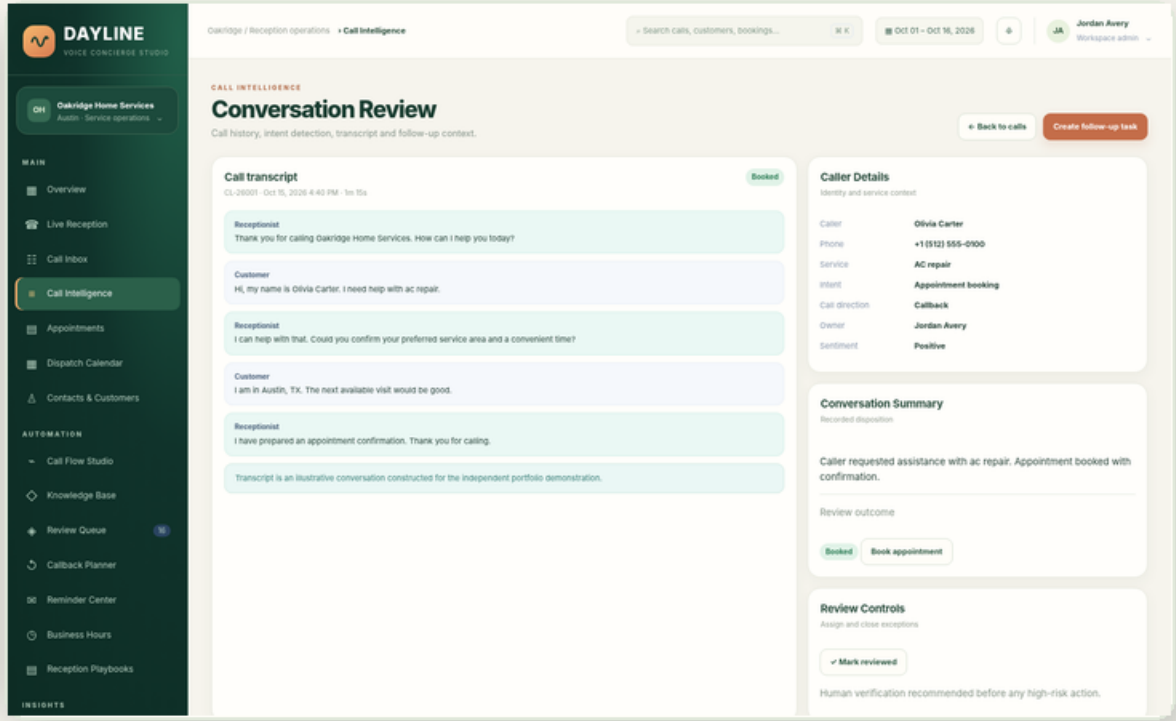

RECEPTION / CALLS

Conversation intelligence

Simulate a reception scenario; review conversation history and caller intent.

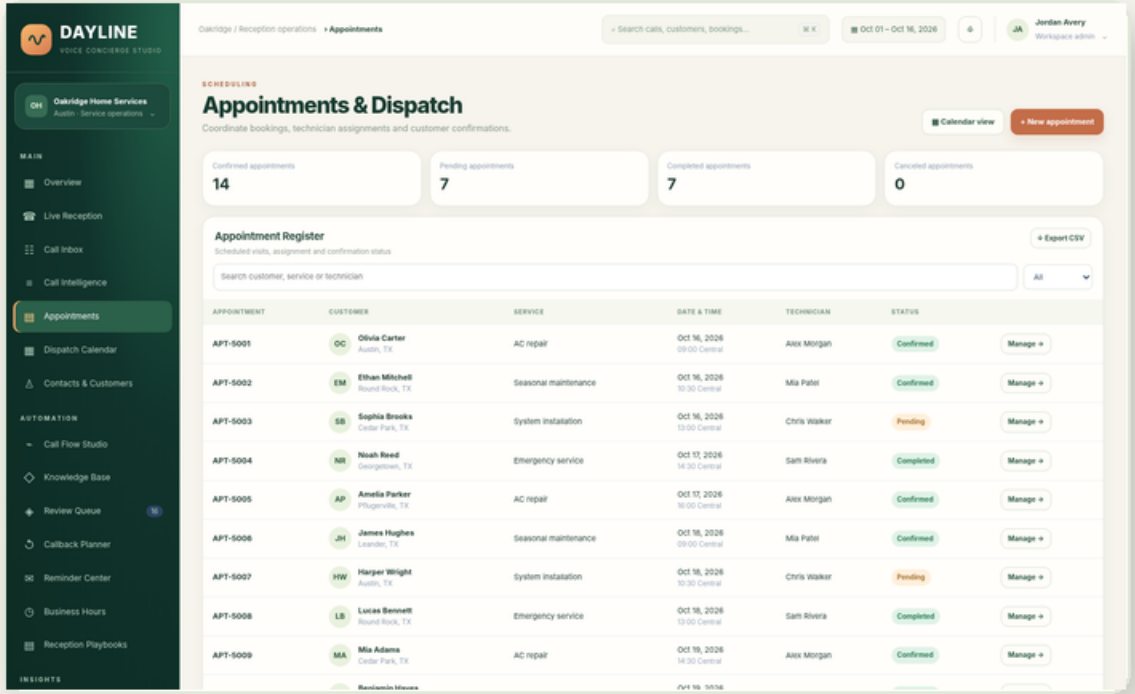

LOCAL SCENARIO ENGINE

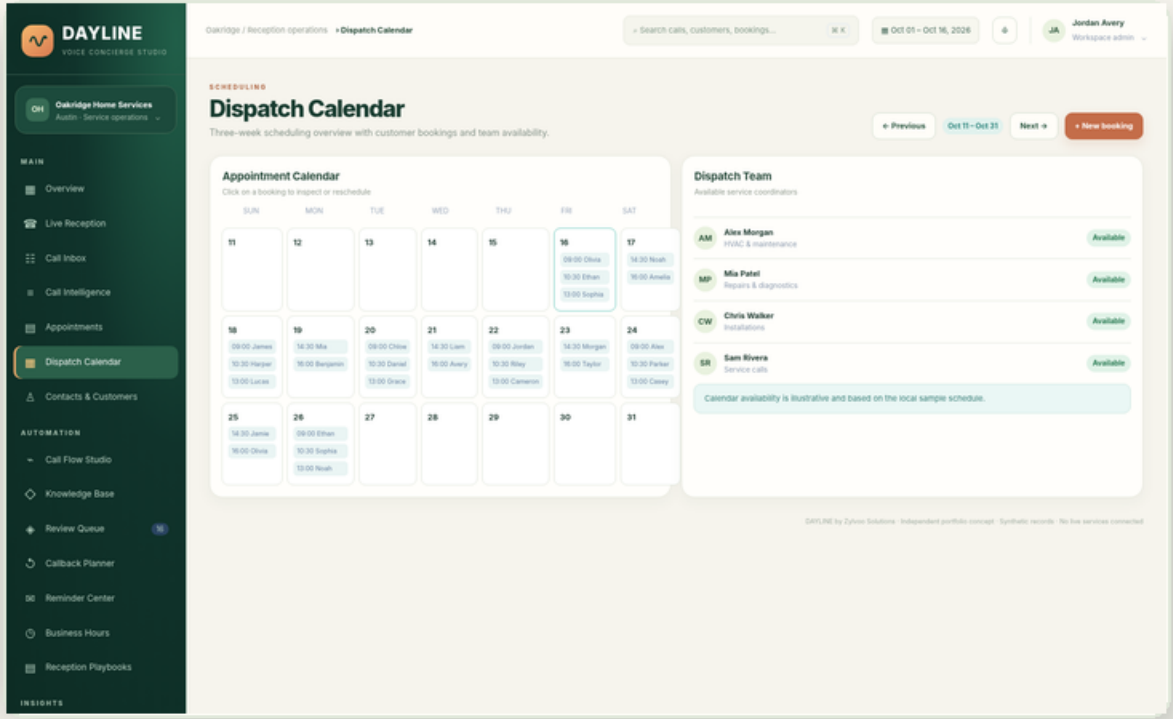

Not a live voice agent, speech-to-text service, or telephone connection.

SCHEDULING / OPERATIONS

From conversation to appointment

Create and review appointments with browser-local conflict checks.

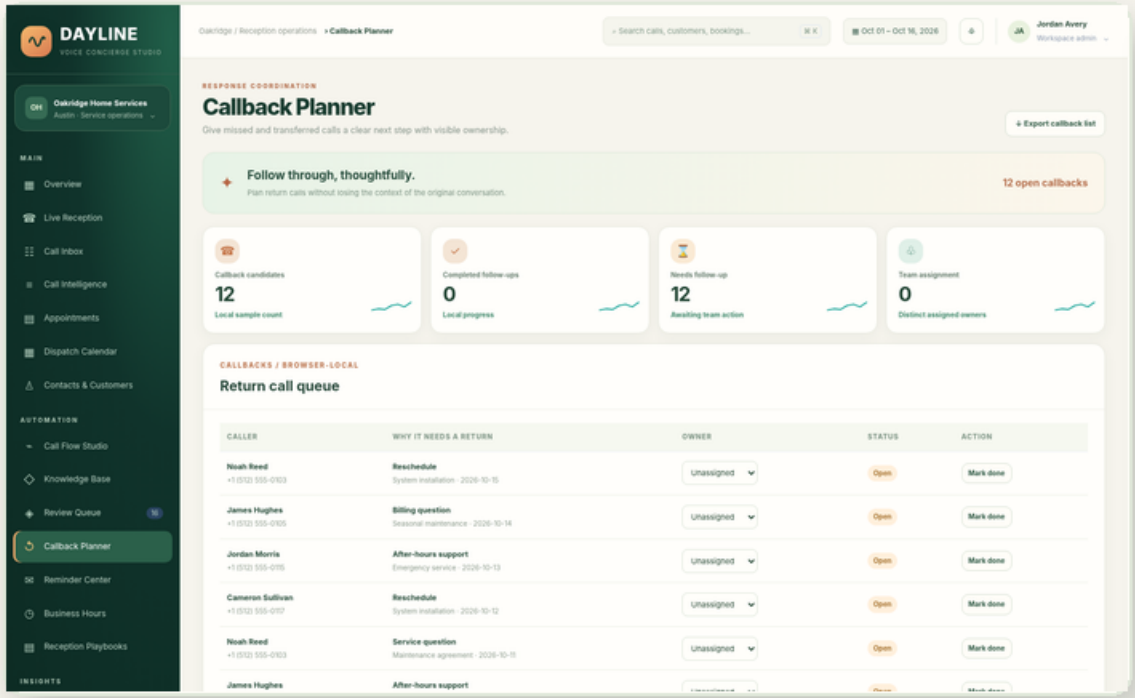

FLOW

Caller details → Service request → Date and technician → Confirm locally

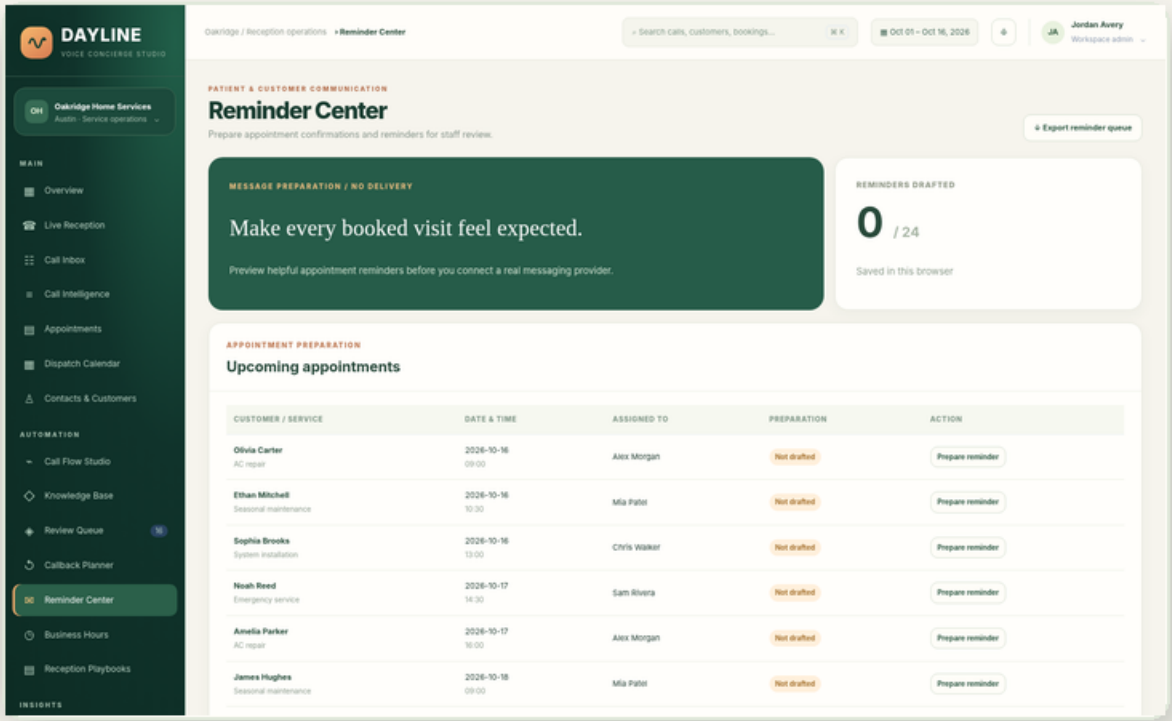

NEW / CALLBACKS + REMINDERS

Never lose the next step

Two new views designed for follow-through after the conversation.

Assign owner and toggle callback state

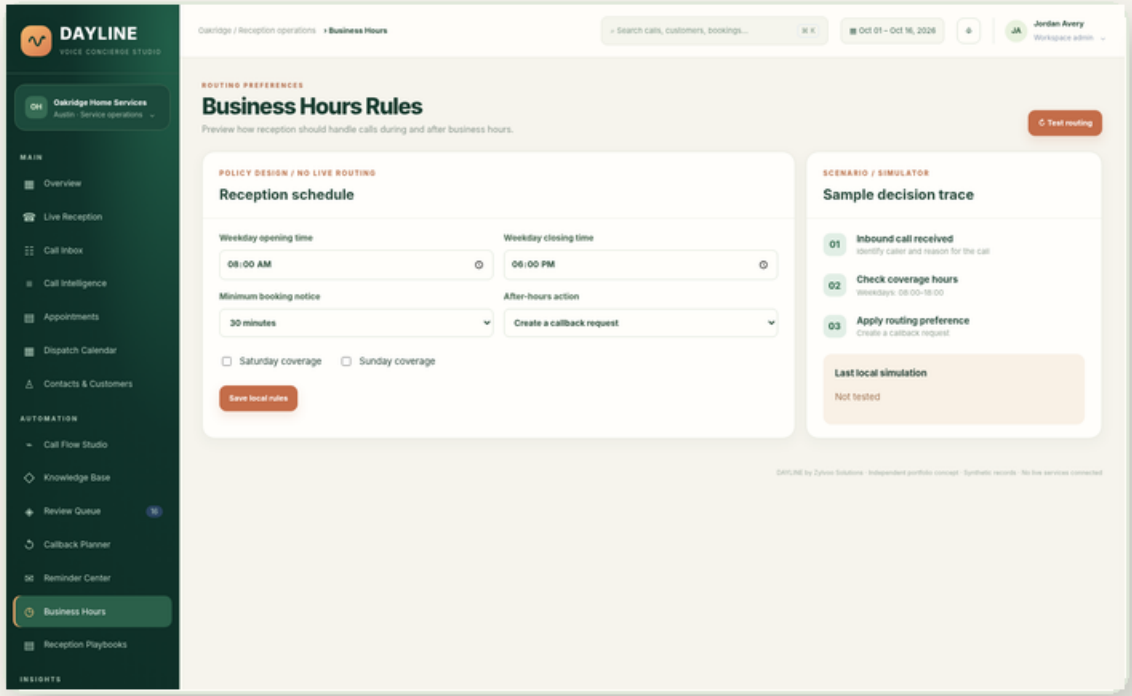

Prepare reminder draft (not sent)

NEW / RECEPTION GUIDANCE

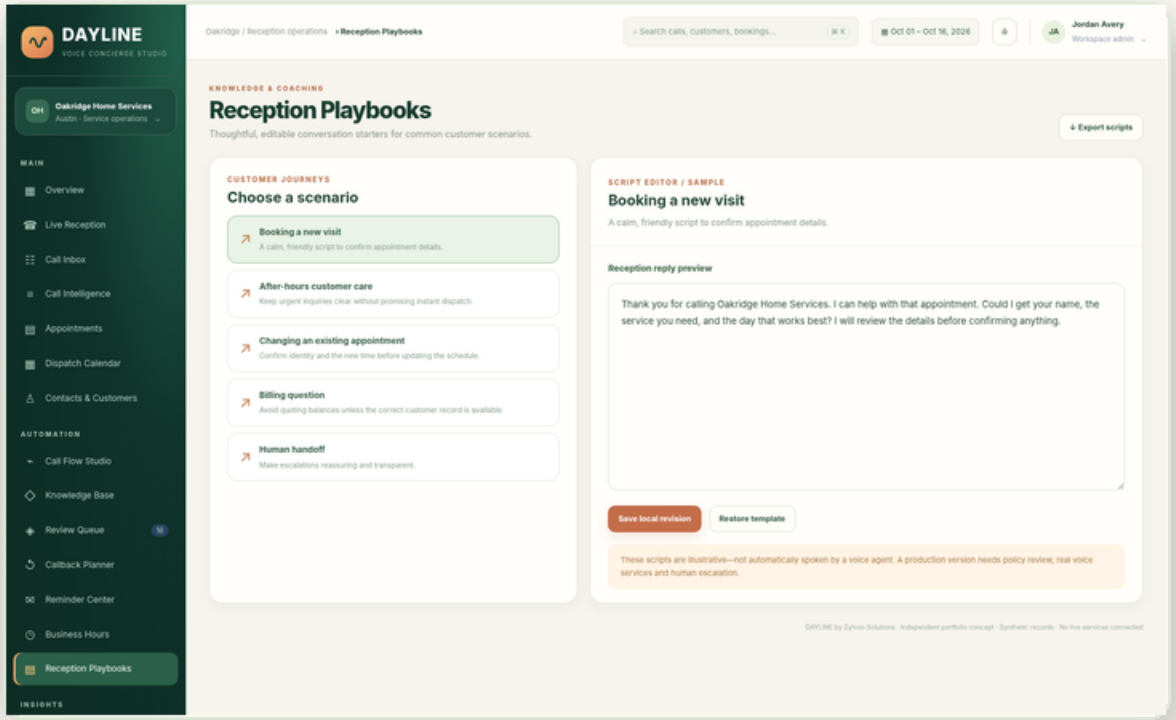

Rules & human-centered scripts

After-hours decision previews and reusable communication playbooks.

BUSINESS HOURS

Local route test; real call forwarding is not enabled.

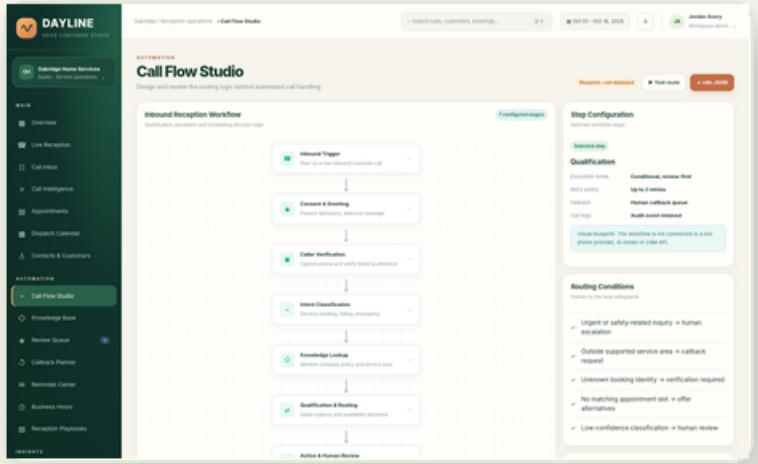

RECEPTION PLAYBOOKS

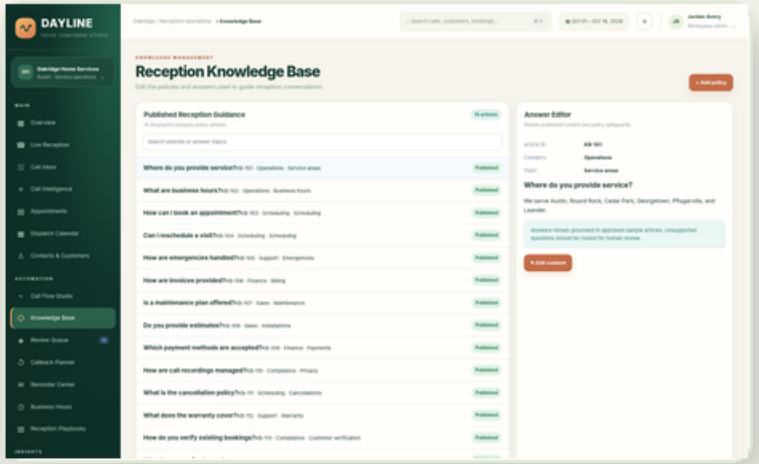

FOUNDATION / 15 EXISTING VIEWS

Knowledge, call flows and reporting

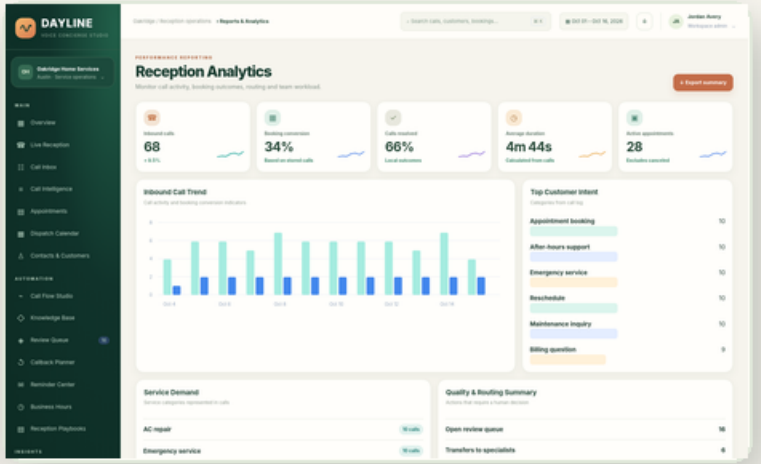

The original functionality remains alongside the four added modules.

Routing blueprint

Support knowledge

Call analytics

Source documents, call-flow simulations and synthetic analytics are browser-local demonstrations.
