postlane.

REVENUE MESSAGING / EMAIL FOLLOW-UP WORKSPACE

Conversations, with intention.

CRM-style email operations, sequence design, human approvals and reply routing

From inbox overload to clear next steps

Postlane is a distinctly designed revenue-messaging workspace for organizing follow-ups, qualifying replies, approving drafts and tracking outreach programs. The product demonstrates how a small revenue team could coordinate without losing control of tone, timing or recipient preferences.

The challenge

Replies arrive across messages and campaigns. Owners need to identify interest, questions and opt-outs while preventing unnecessary follow-ups.

The experience

Three-pane unified inbox, step-based sequences, letter-style templates, explicit review decisions and contextual reporting.

The approach

Standalone interactive HTML using fictional sample records; local actions, transparent rule logic and an importable n8n starter for routing decisions.

Deliverables: 13 actual application screens • Upwork gallery cover • source-linked PDF case study • SVG architecture • sample CSV/JSON • n8n workflow blueprint • test guide • portfolio copy.

Product modules and responsibilities

Messaging

Inbox triage and human-guided reply drafts.

Campaigns

Sequence stages, pauses, review gates and owners.

Audience

Contact segments, suppression, filters and CSV.

Content

Personalized drafts, variables, previews and checks.

Governance

Human approvals, opt-outs and activity history.

Operations

Routing workflows, sender checks and calendar.

Measurement

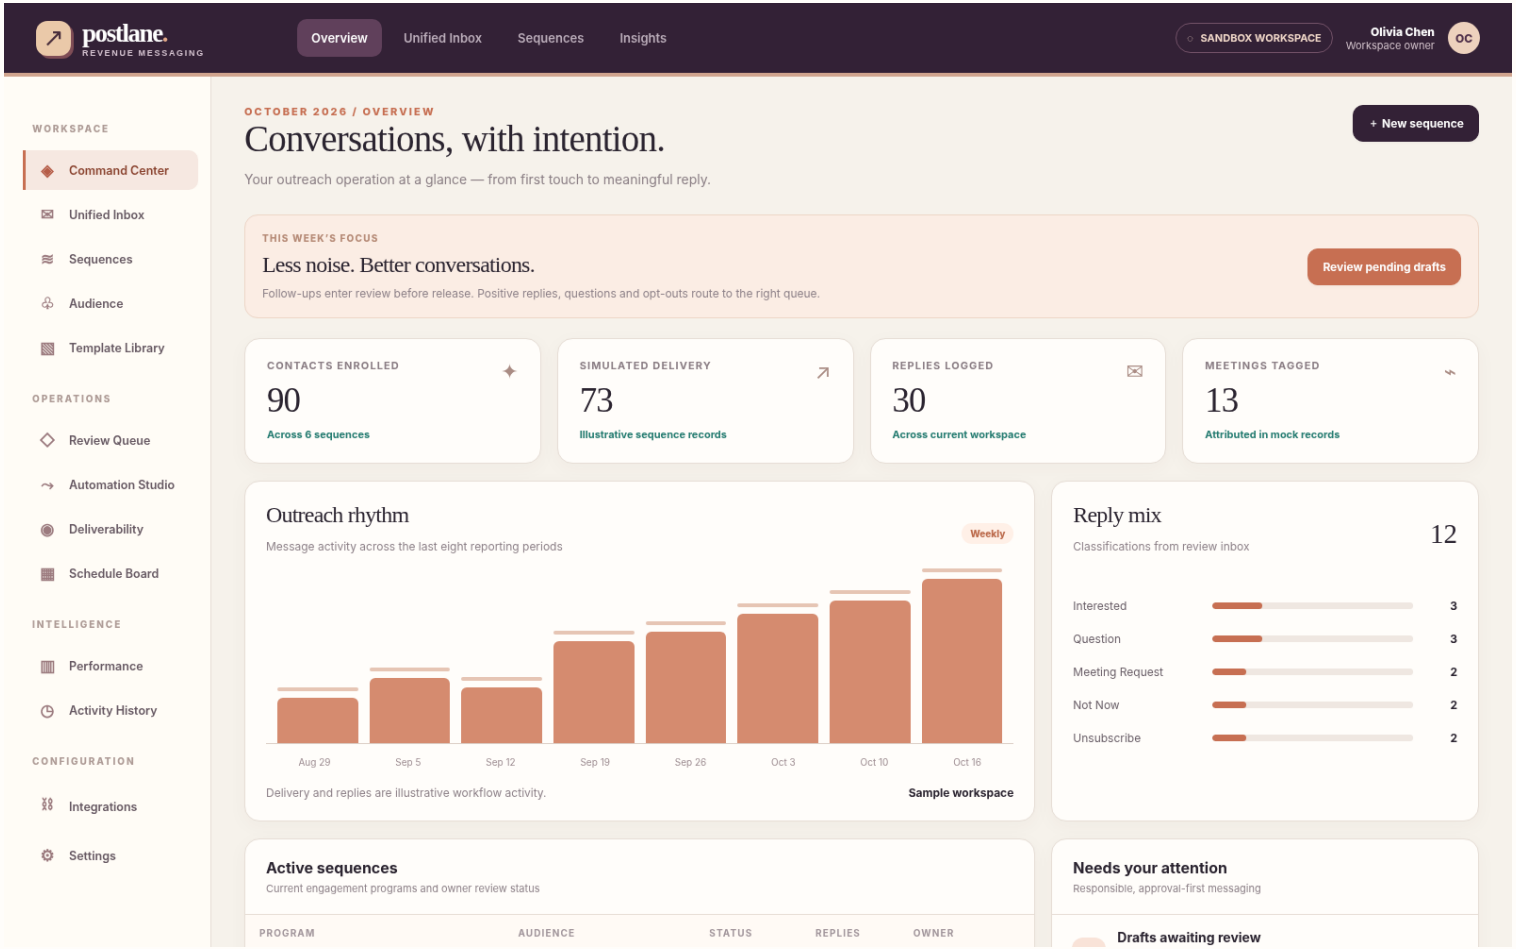

Program reports, intent breakdown and exports.

Configuration

Workspace preferences and integration plans.

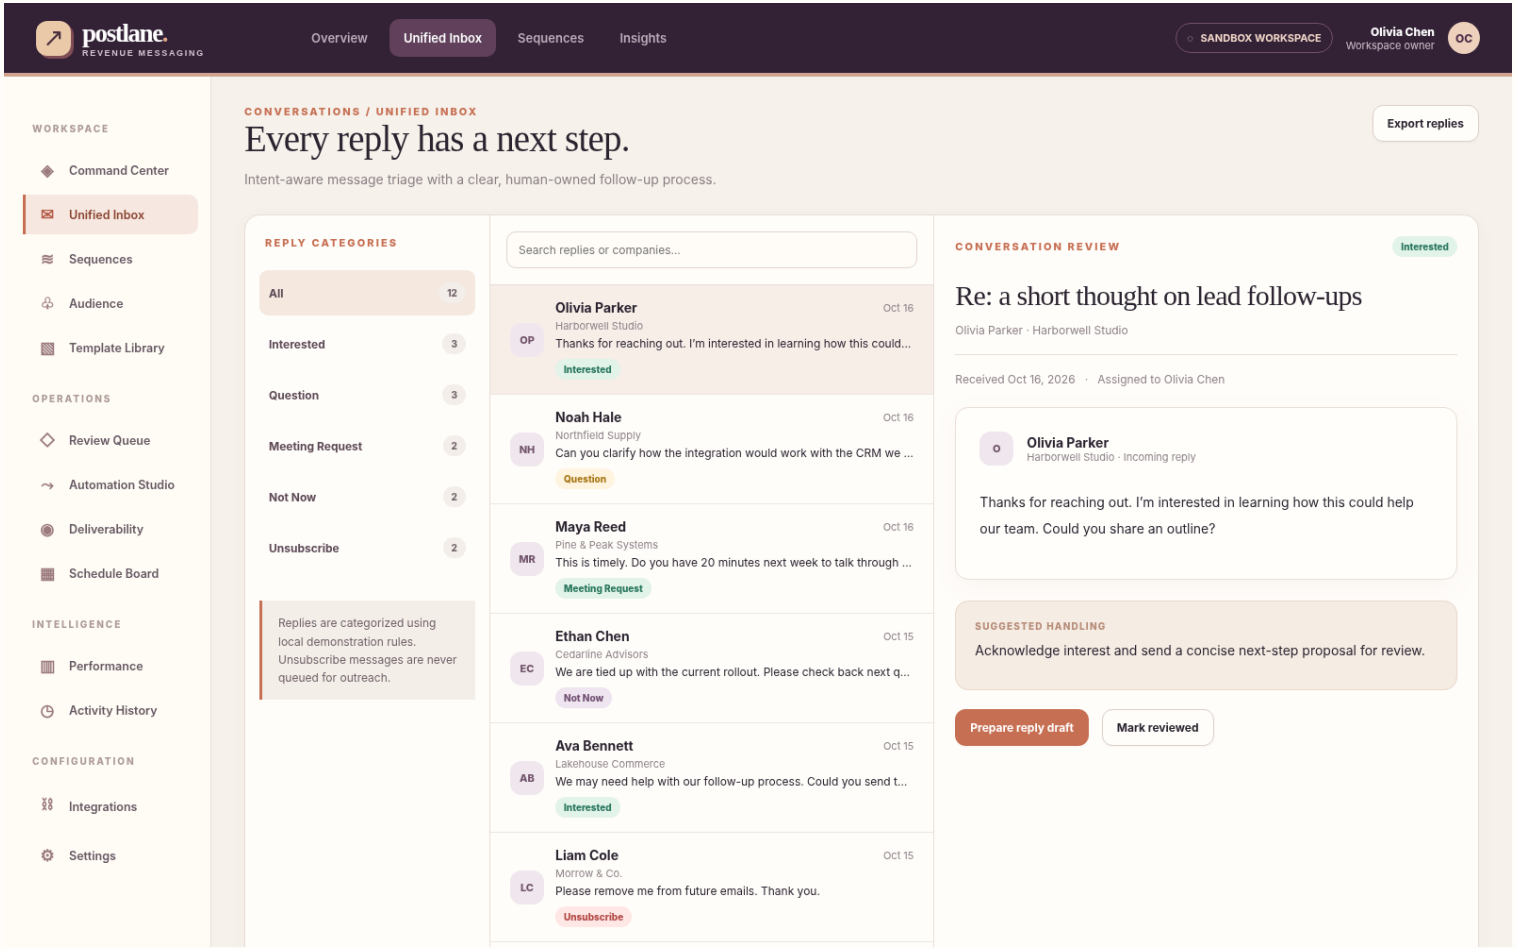

Command Center

An editorial overview of outreach rhythm, conversation performance and priority reviews.

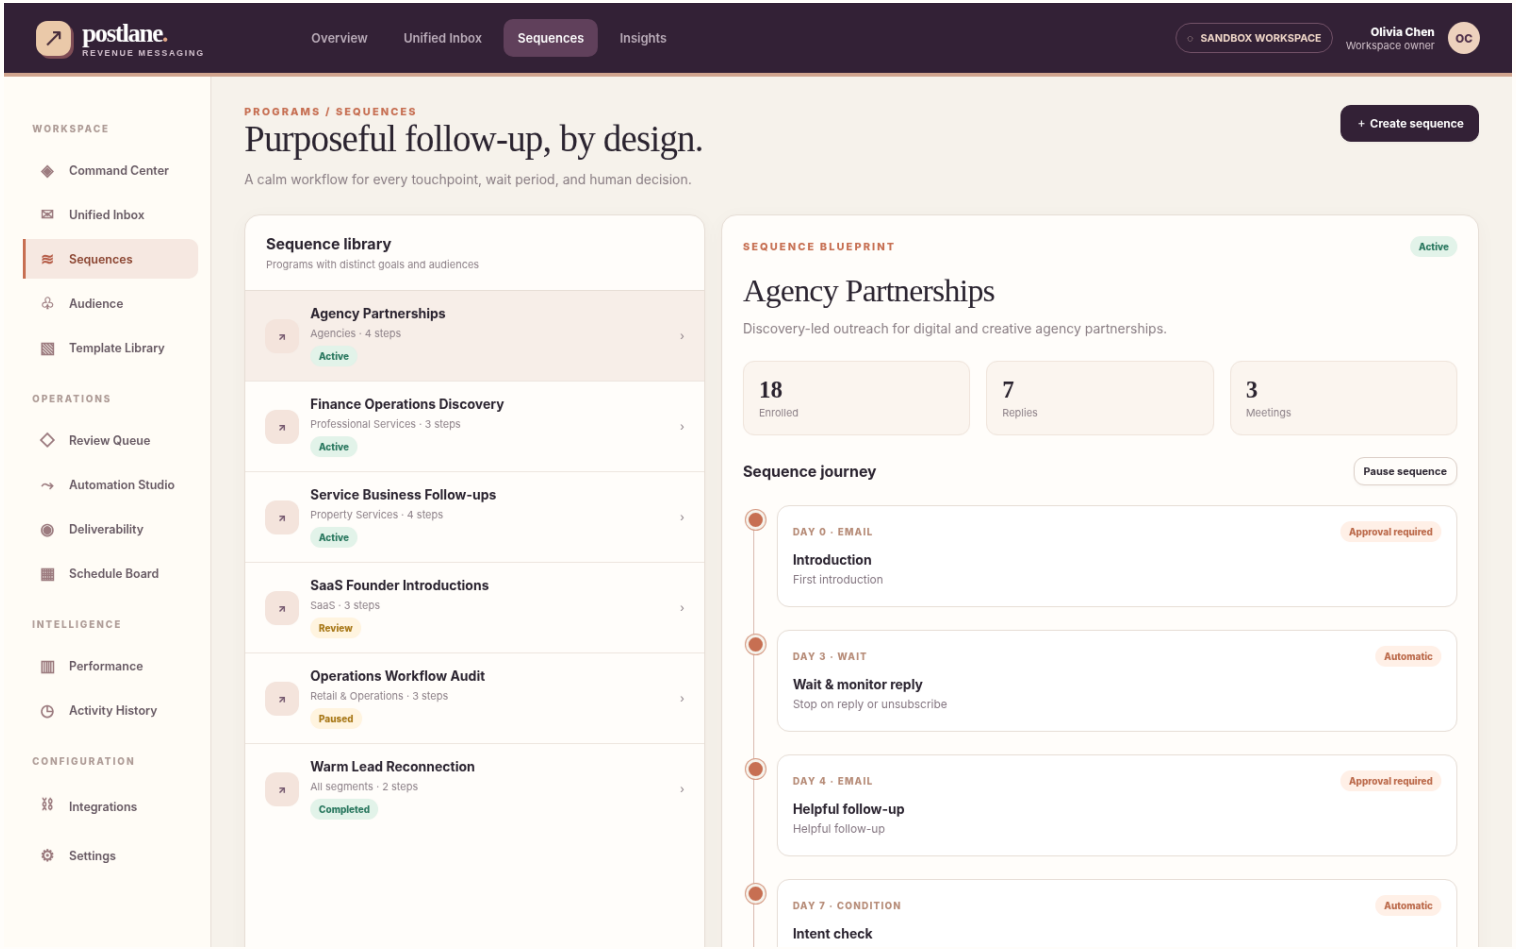

Unified Inbox

Three-panel message triage with categorized intents and owner-guided next actions.

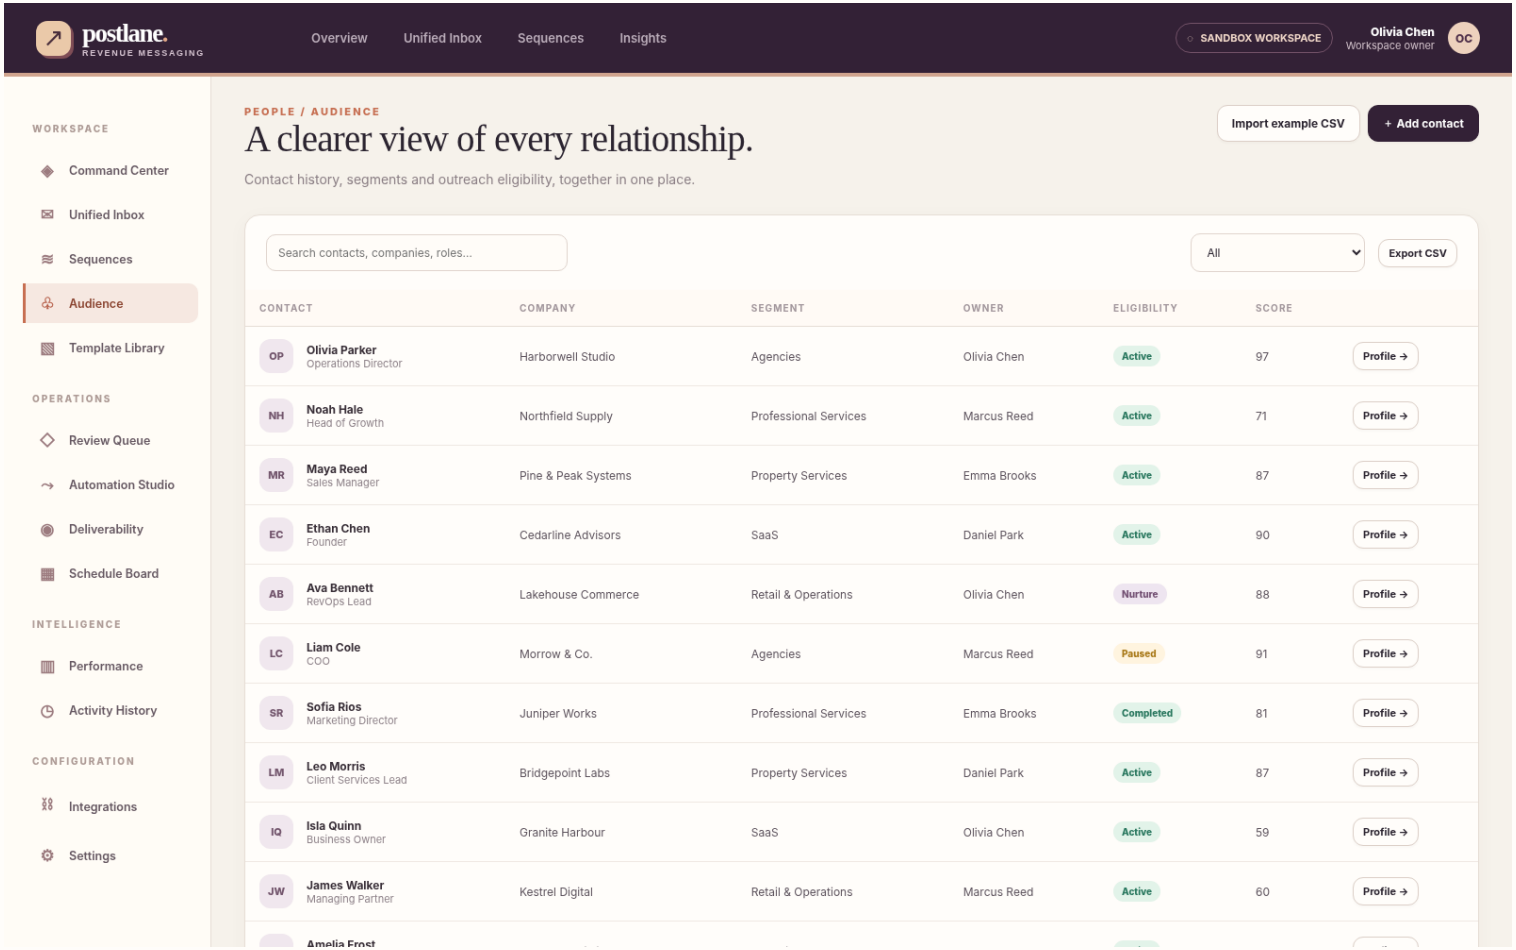

Sequence Design

Campaign library, conditional waits, stop rules and review checkpoints.

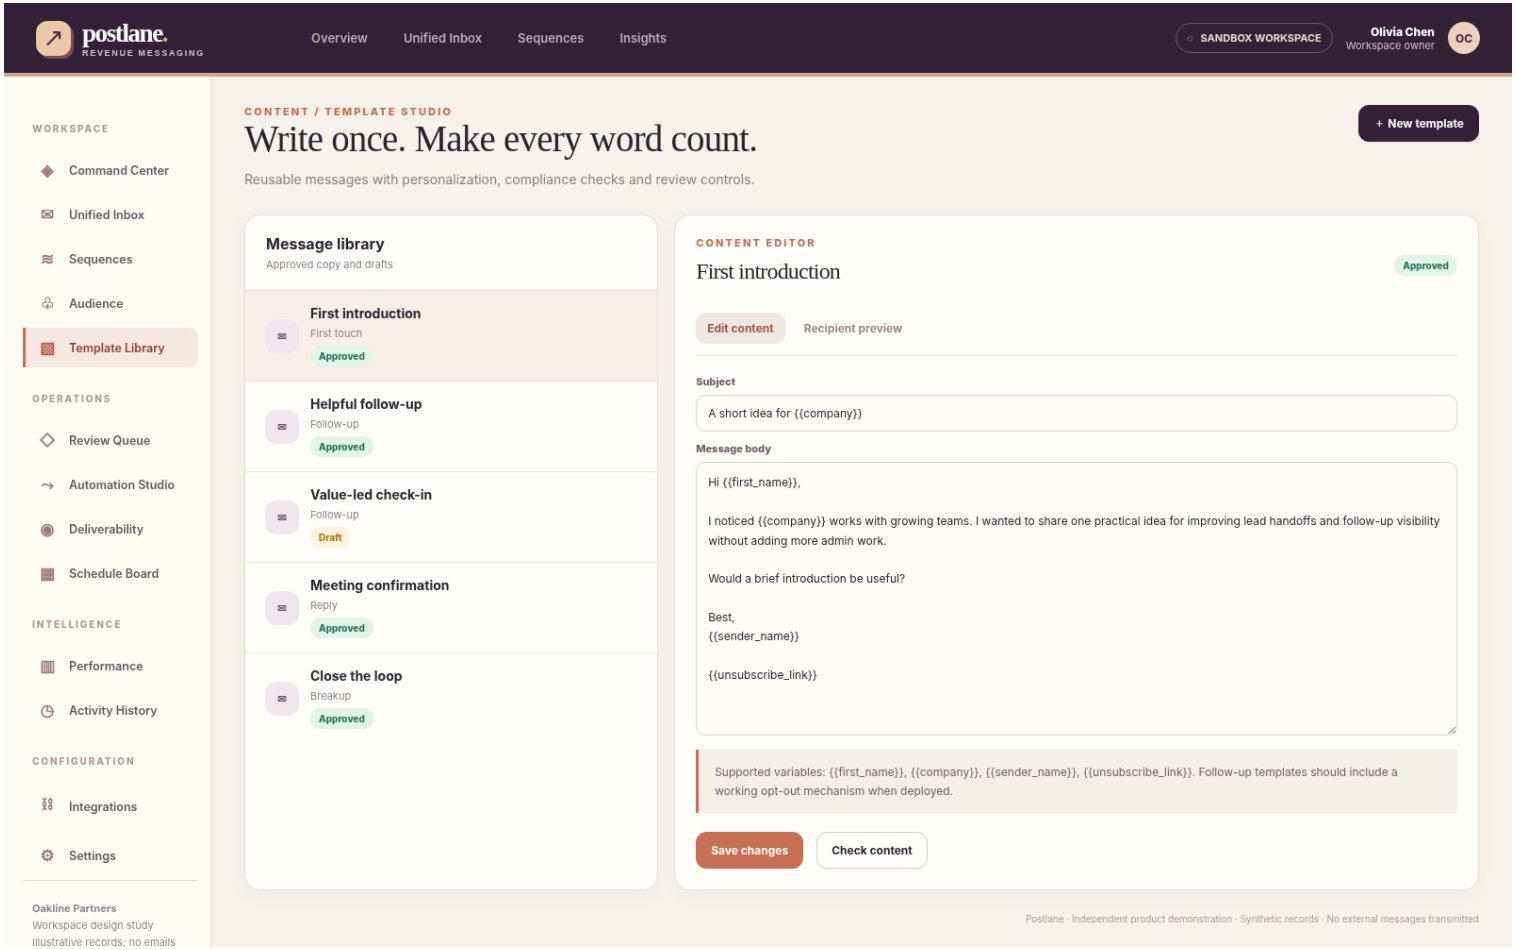

Audience Management

Contacts, segmentation, eligibility states and filtered exports.

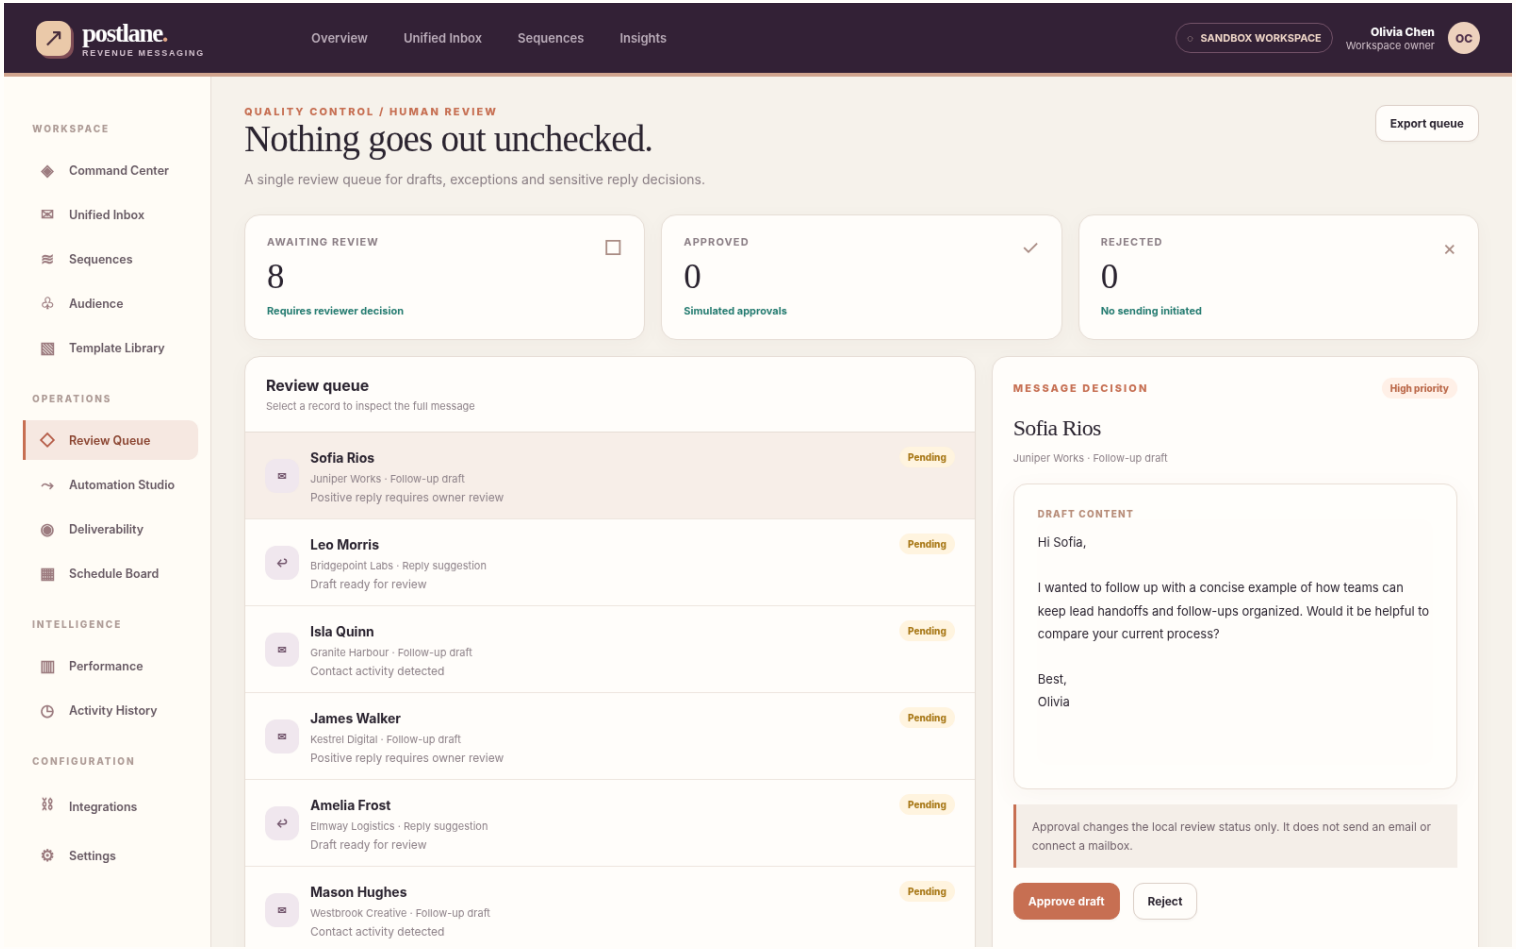

Template Studio

Composed email editing with merge tags, live recipient preview and content checks.

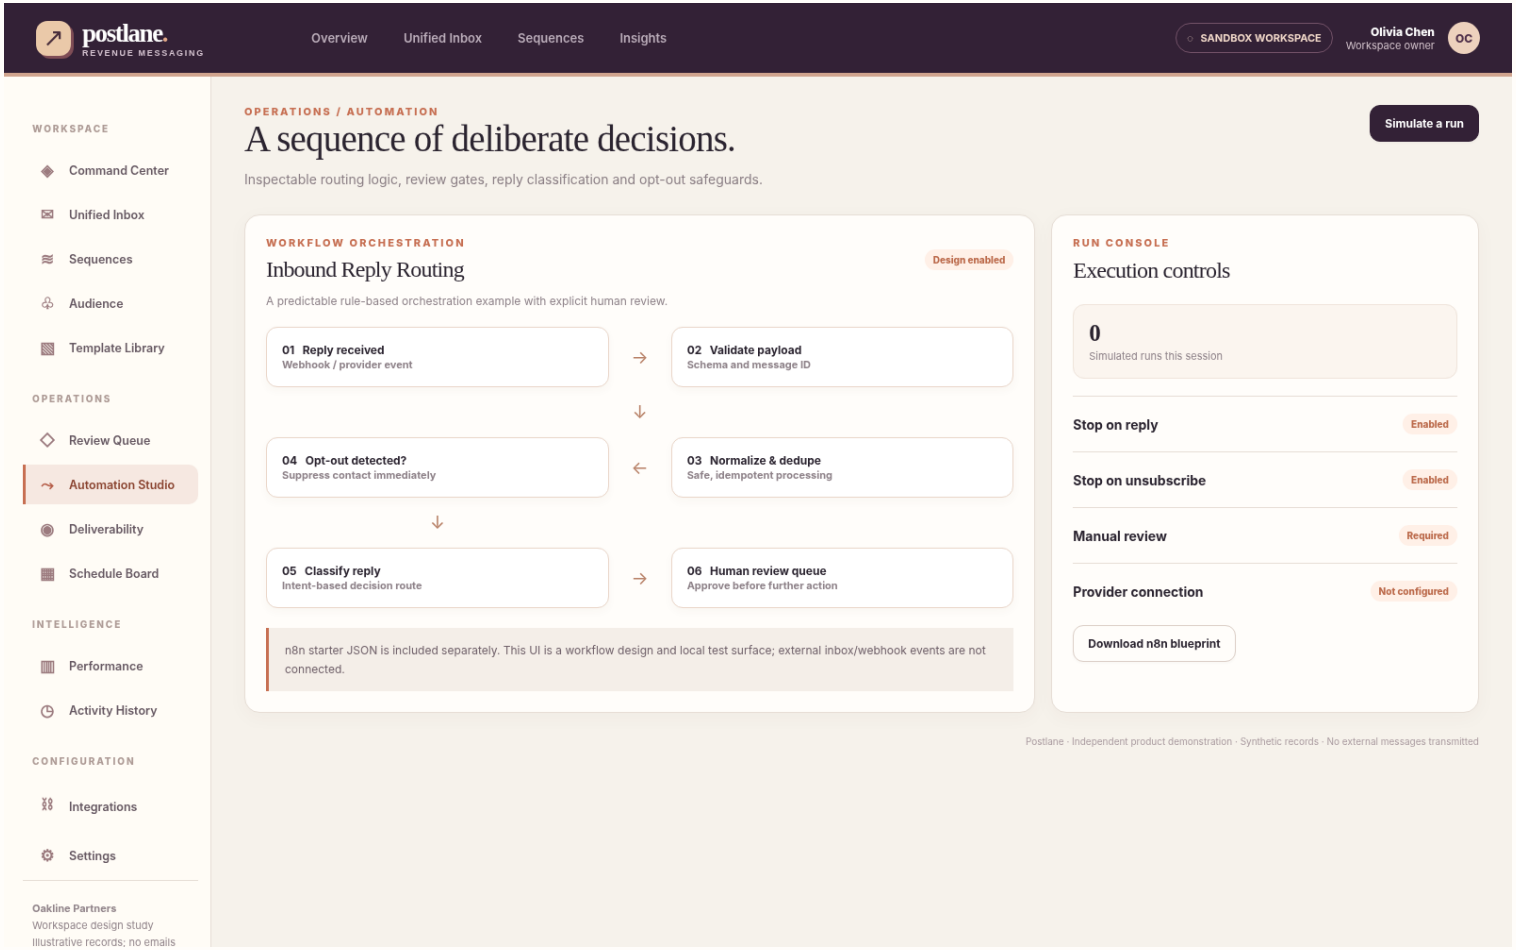

Human Review Queue

Draft approval/rejection with no external send and an activity trail.

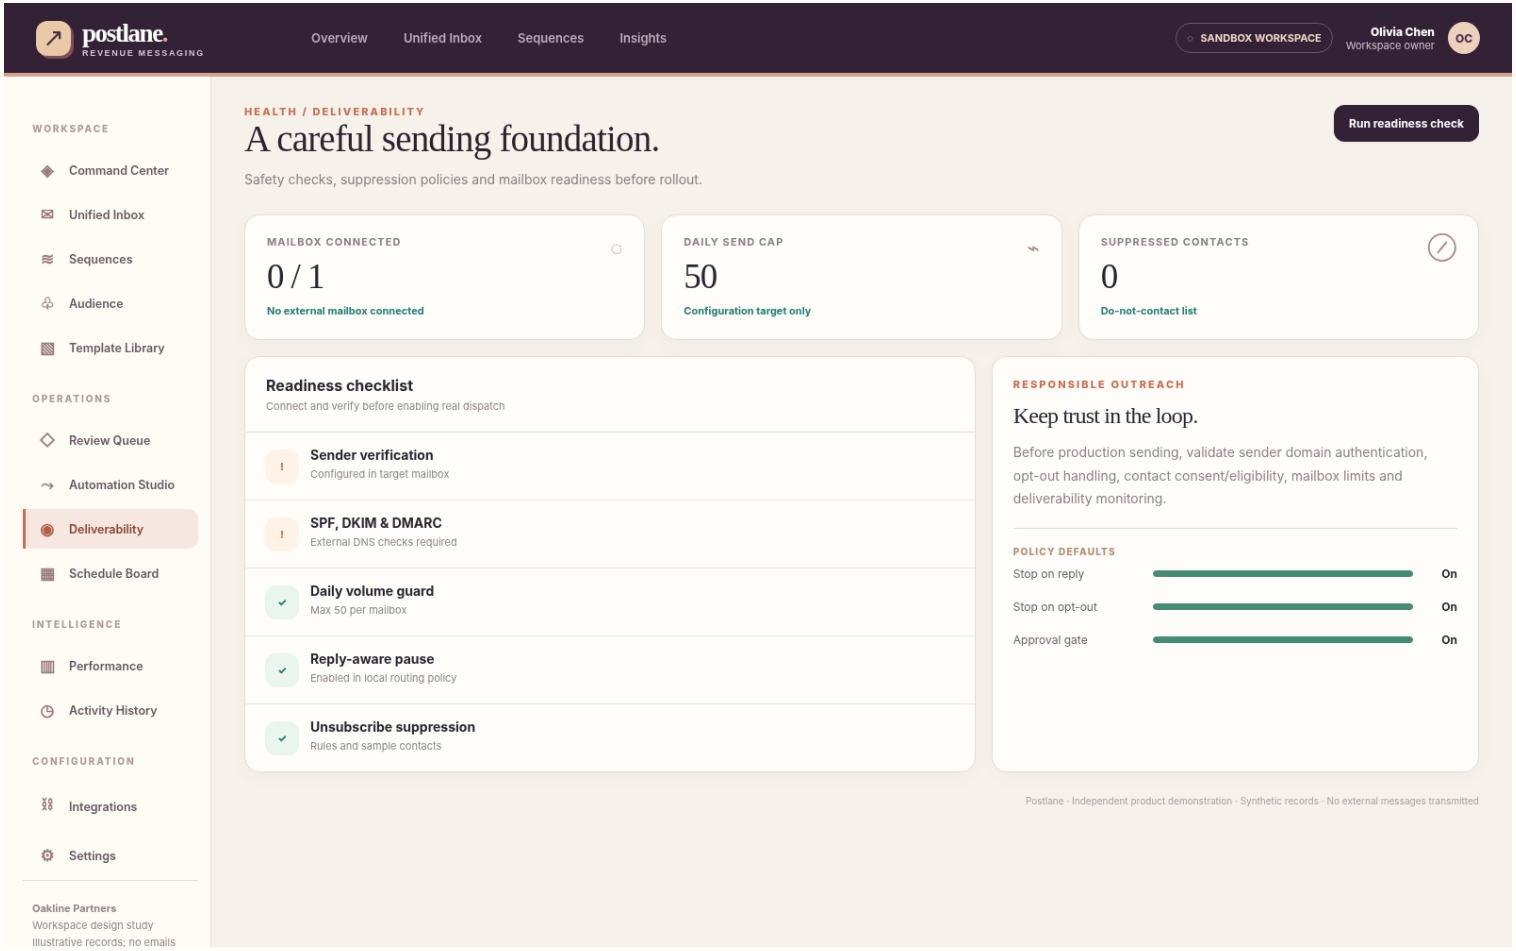

Automation Studio

Visible validation, suppression, classification and manual approval stages.

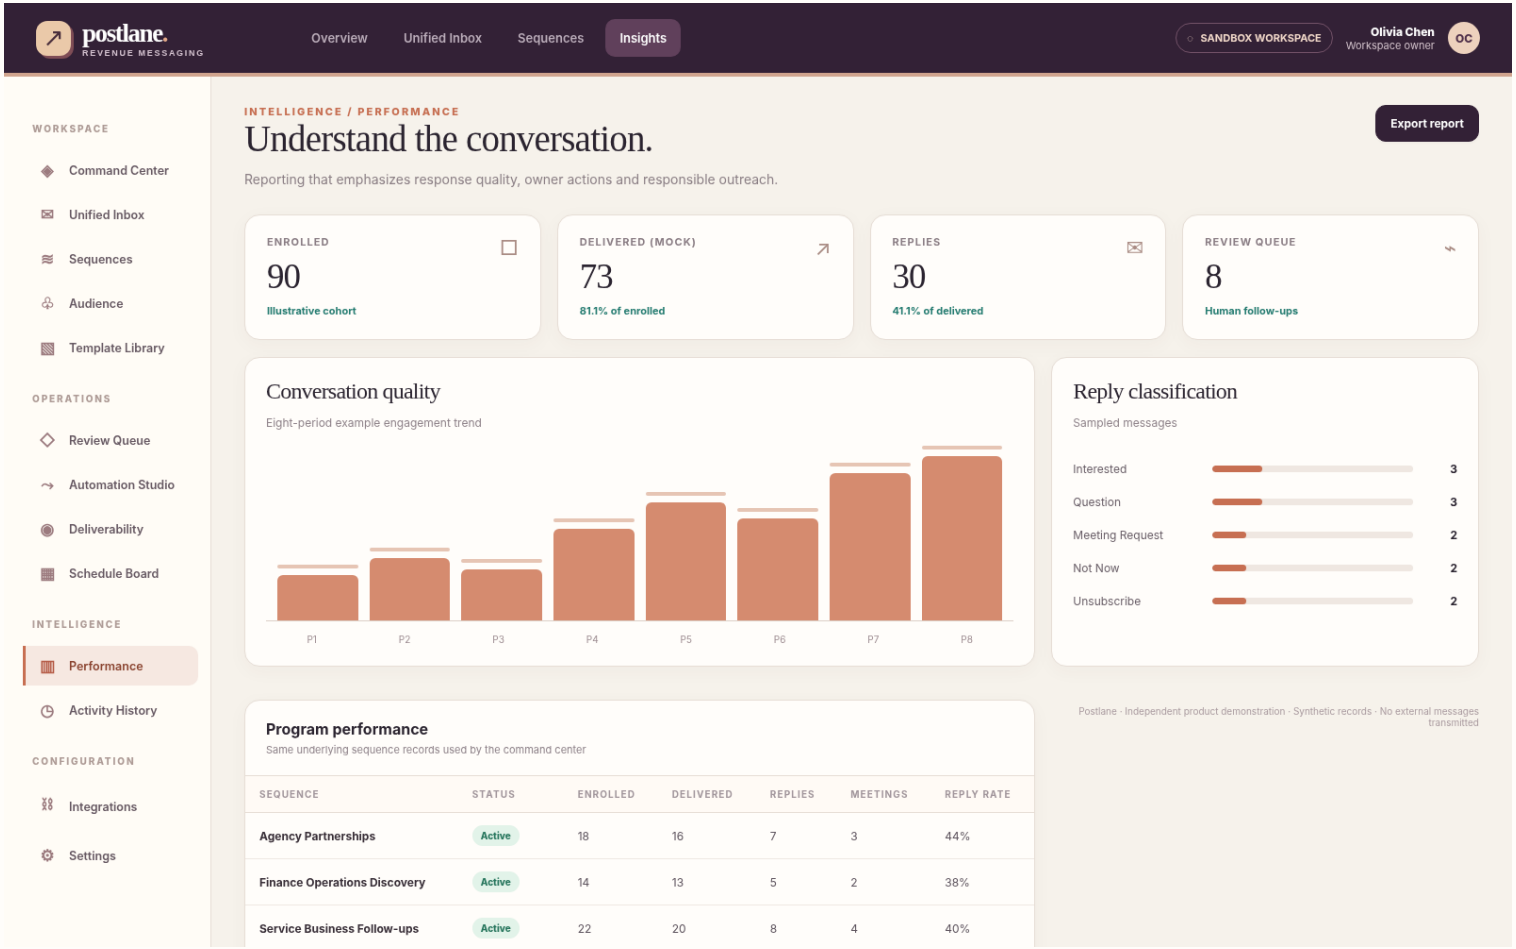

Deliverability & Readiness

Safe sending prerequisites, domain authentication and compliance checks.

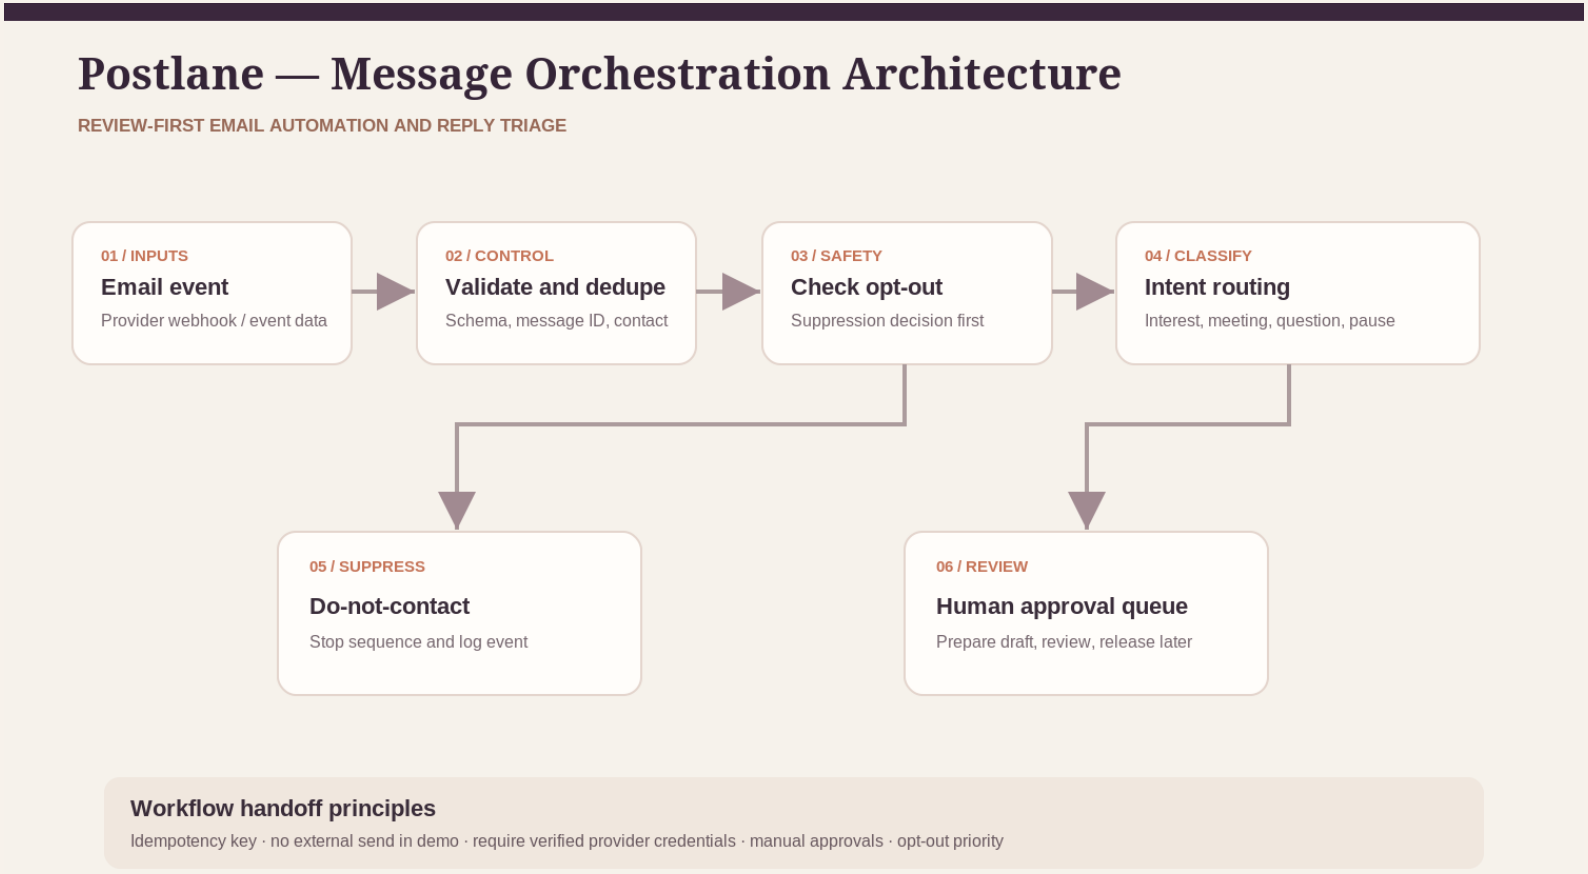

Analytics & Reporting

Cohesive mock-data program metrics, reply categories and report exports.

Routing architecture & n8n starter

Webhook -> payload validation -> deterministic intent routing -> manual review / suppression directive. External providers are not connected.

Starter workflow classifies via simple rules and returns decisions; it does not send email or persist opt-outs.
