VelaHire

TALENT OPERATIONS WORKSPACE

Recruitment & HR Workflow Automation

A professionally designed, interactive recruiting system concept supporting applications, job-related evidence review, structured interviews, offers, onboarding and human approval.

27
CONNECTED MODULES

72
SYNTHETIC APPLICANTS

12
JOB REQUISITIONS

PROJECT 07 / ZYLVOO SOLUTIONS / OCTOBER 2026

Designed around the hiring journey

VelaHire addresses fragmented applicant intake, inconsistent evidence reviews, scheduling coordination and offer follow-through. The experience is intentionally built around accountable recruiter actions instead of automated accept/reject decisions.

01 / Applicant visibility

Linked candidate and job records, skill evidence, activity and pipeline stages.

02 / Hiring coordination

Interviews, scorecards, task SLAs, approvals and communication drafts.

03 / Responsible automation

Local intake simulation, consent checks, review gates and audit trails.

DELIVERY PACKAGE

Standalone HTML application • 28 real frontend screenshots • Architecture SVG/PNG • n8n starter blueprint and example payload • Structured sample data • QA results and technical scope.

What is functional?

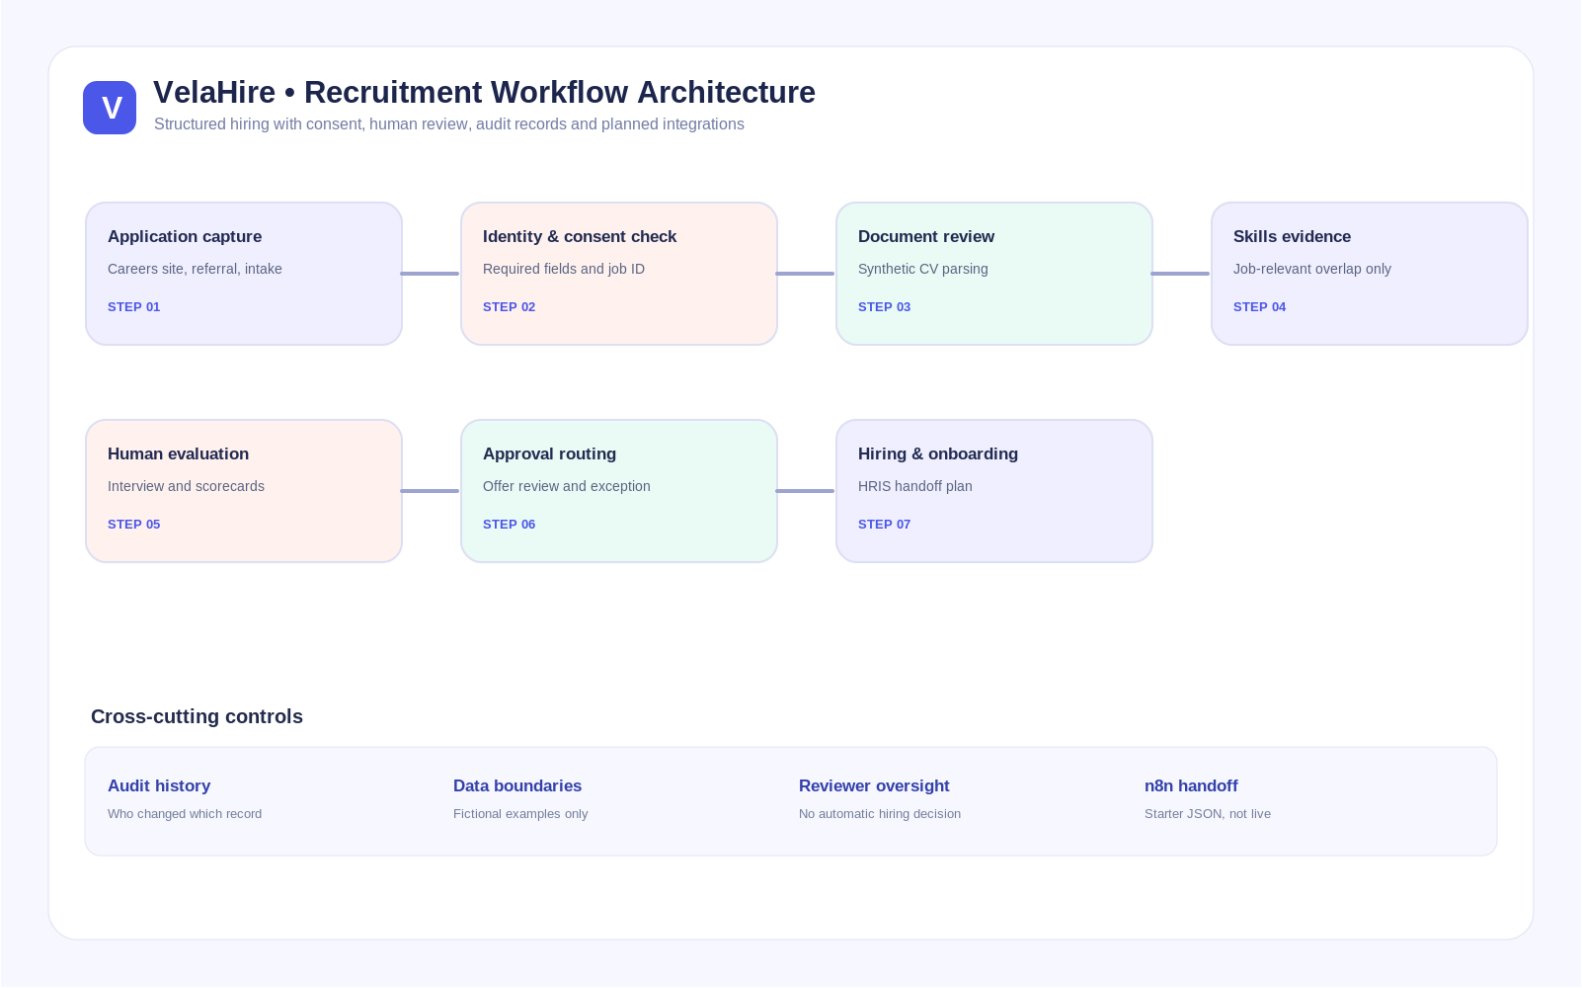

Candidate and job creation; pipeline stage changes; interview booking with conflicts blocked; scorecards; offer drafts; approval decisions; tasks; onboarding; CSV export; local workflow validation.

What is not connected?

Live AI/LLM, OCR, production n8n server, HRIS or ATS APIs, calendar/email sync, user authentication and server-side permissions.

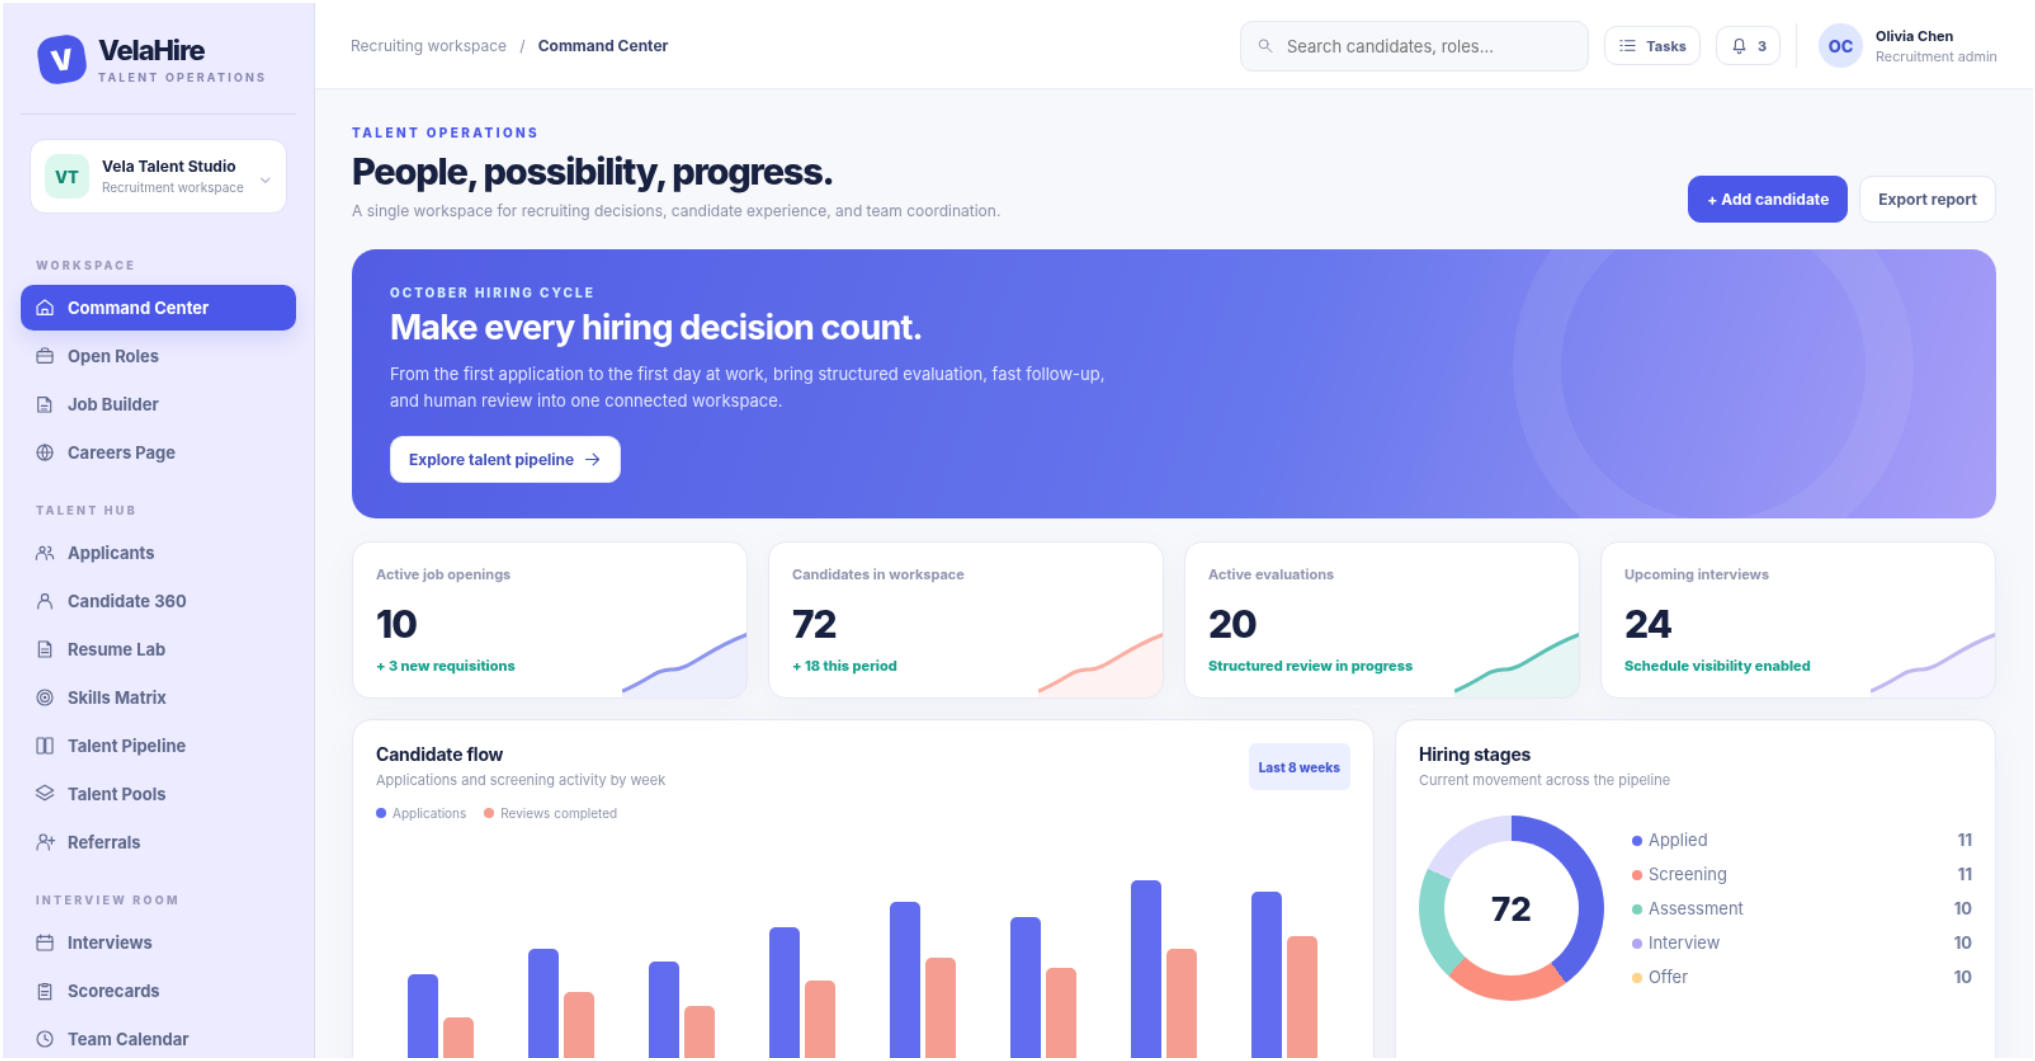

Recruitment operations architecture

An explainable process from application intake through recruiter evaluation, approvals and onboarding. The diagram documents the intended workflow and its controls.

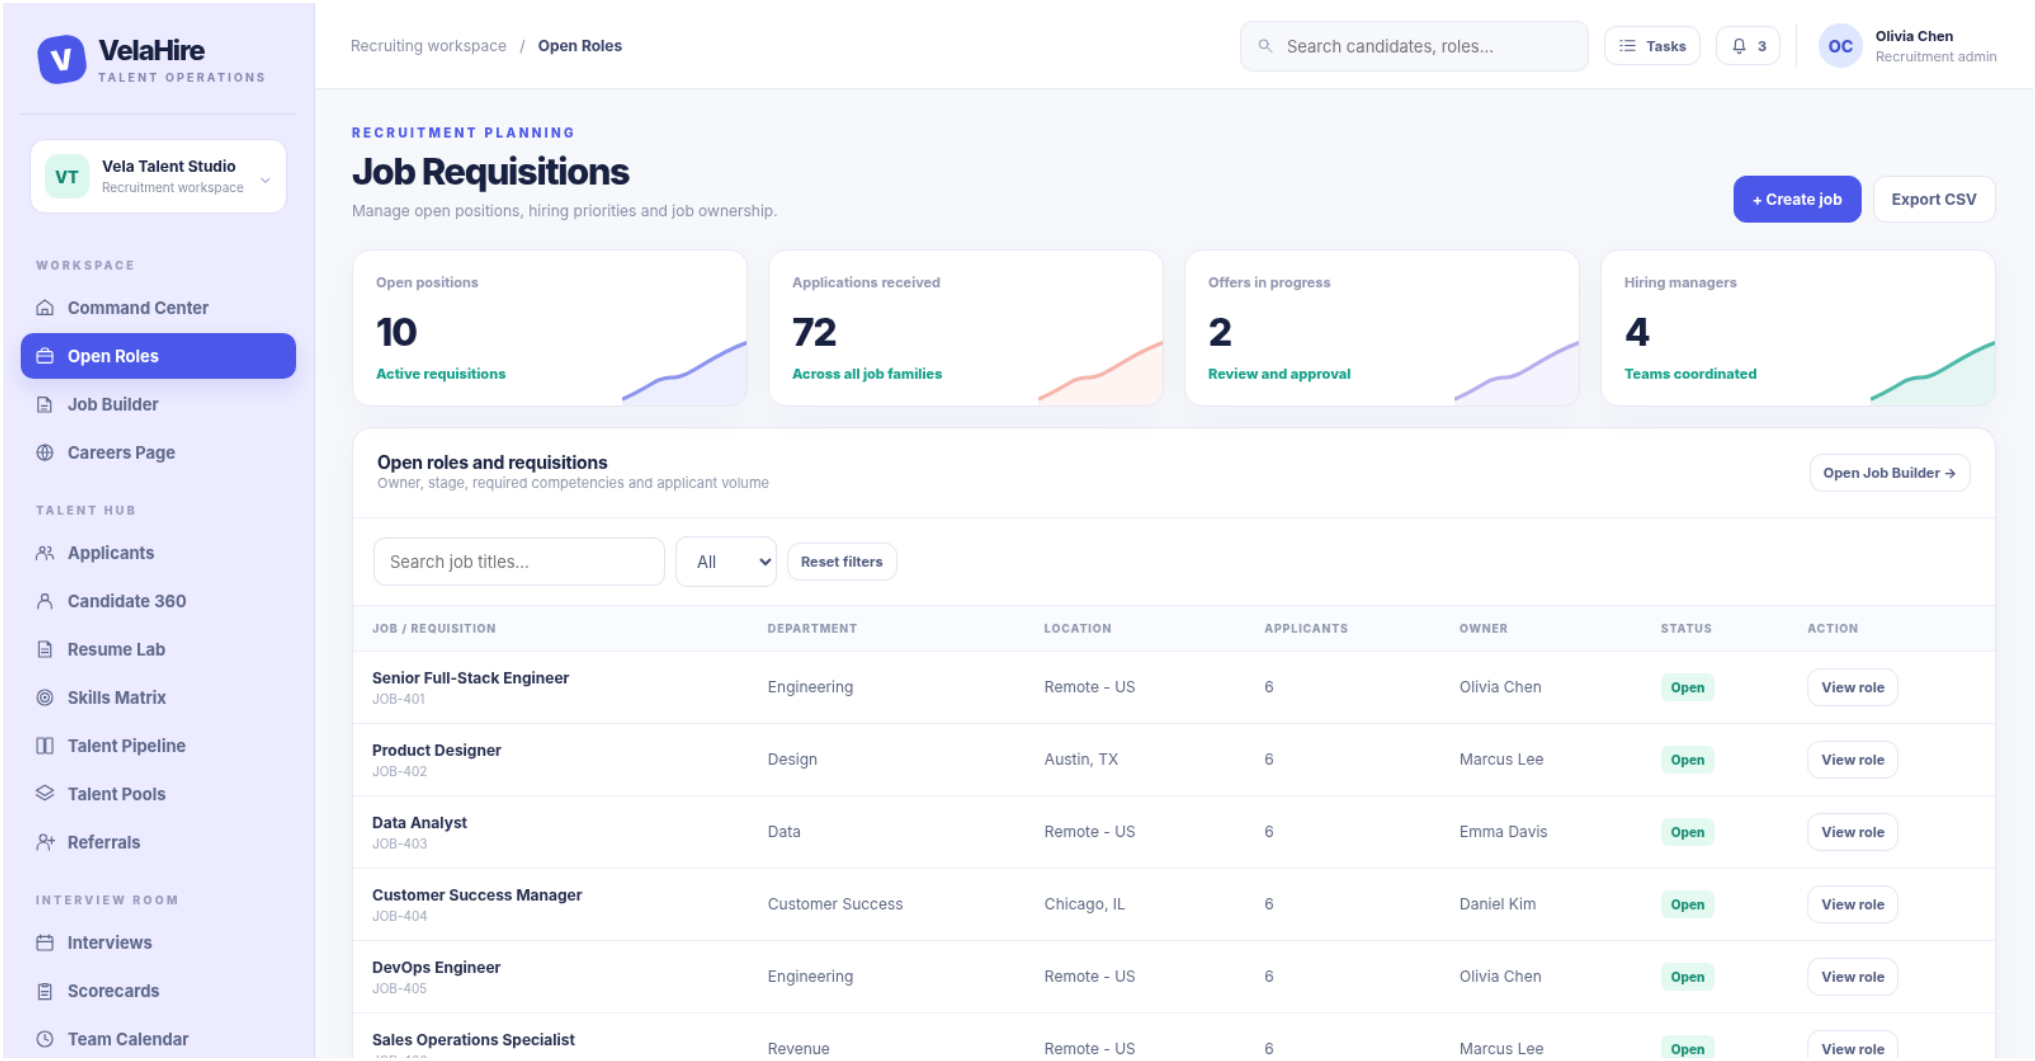

Command Center

Executive recruiting KPIs, candidate movement, key actions and workspace activity.

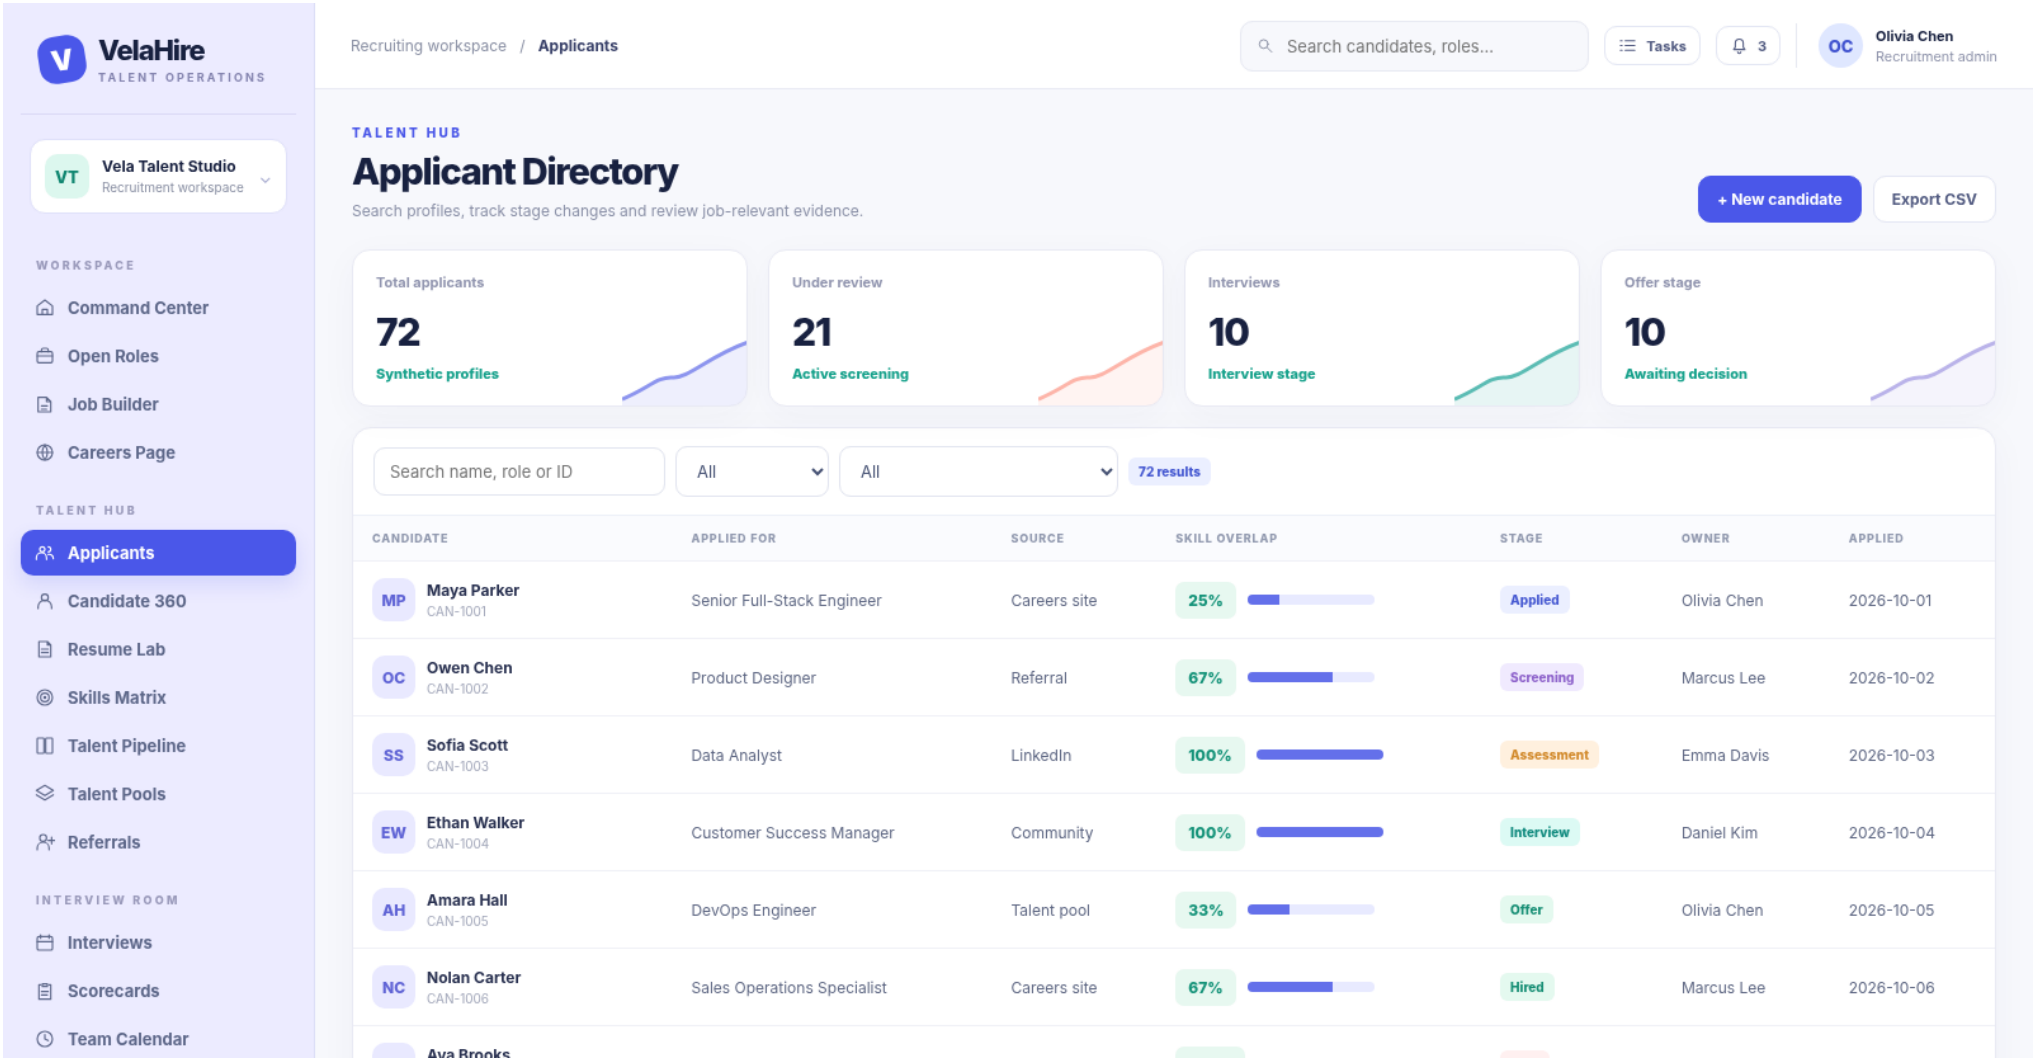

Open Roles

Job requisitions, owners, required skills, applicant counts and requisition status.

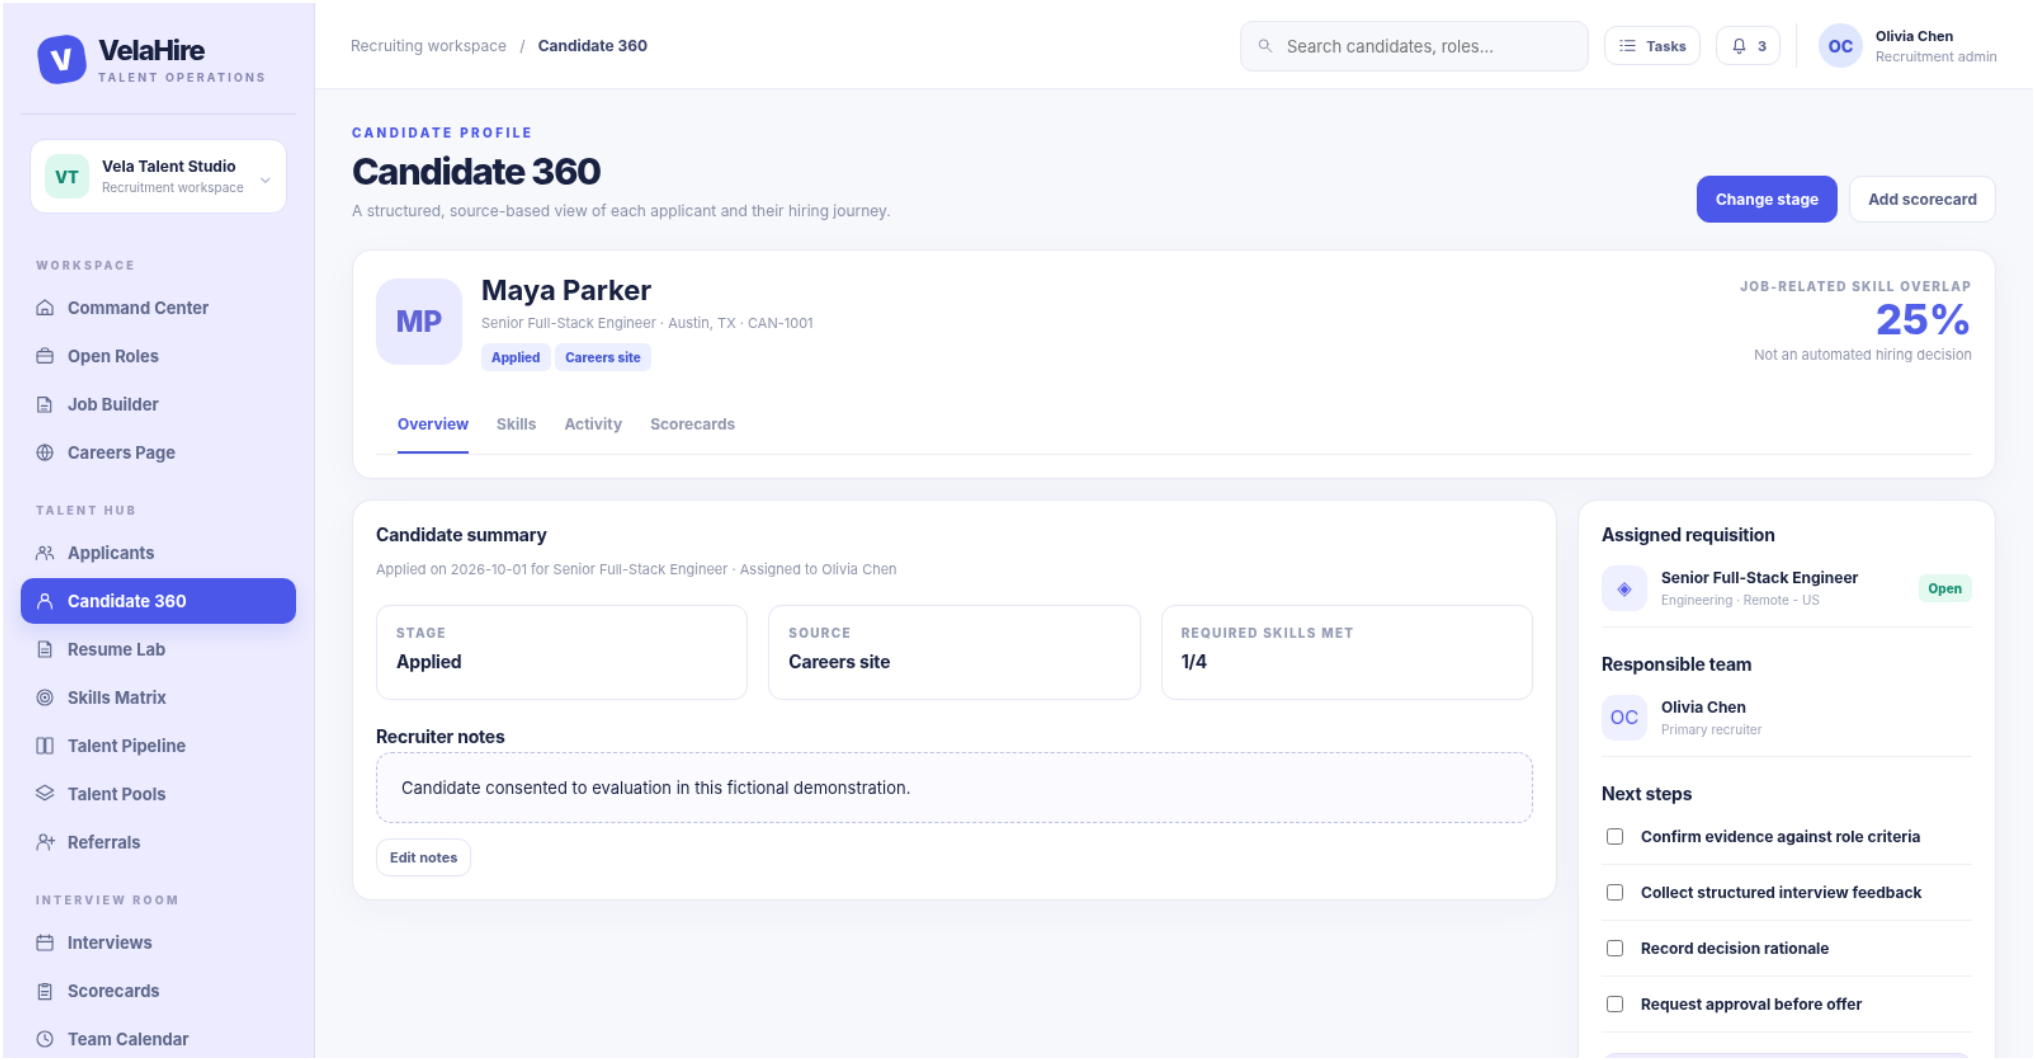

Applicant Directory

Searchable applicant records with transparent skill overlap, stages and ownership.

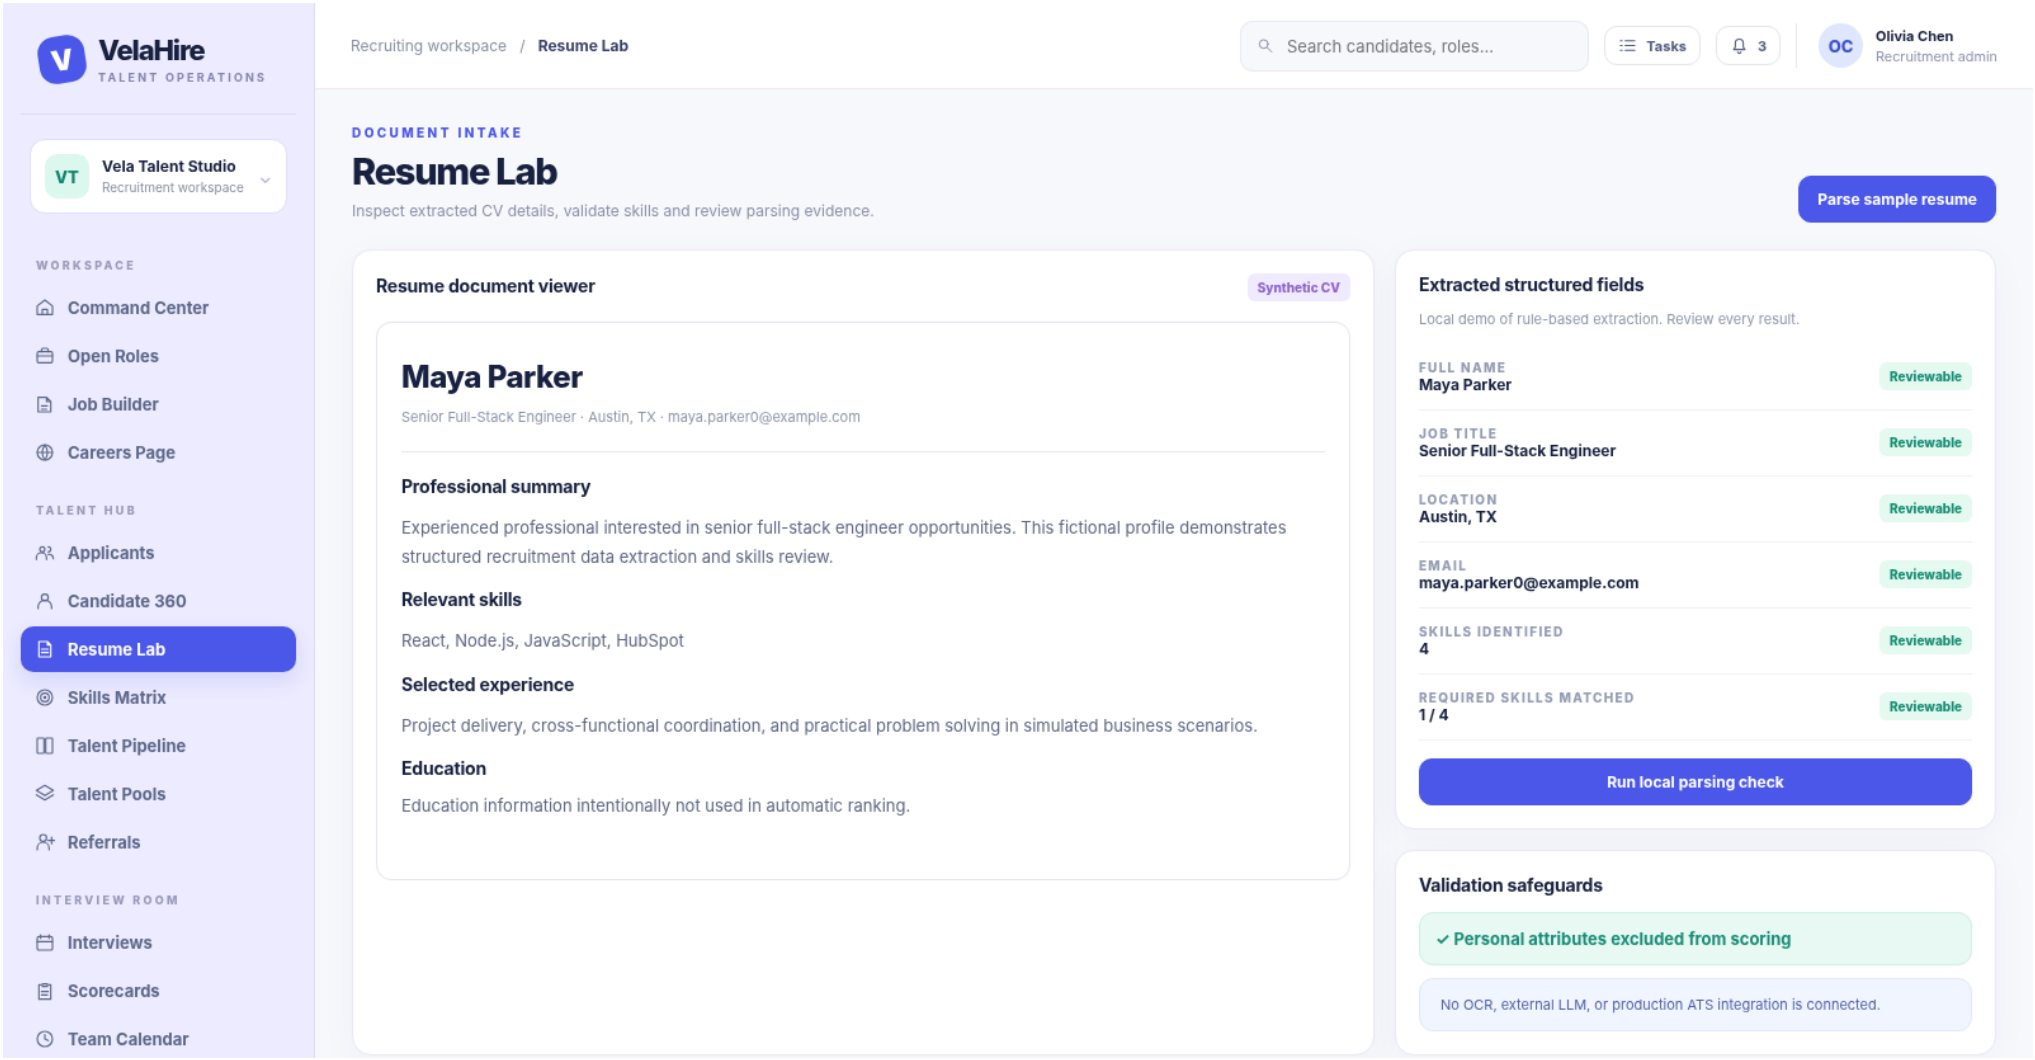

Candidate 360

Source-linked candidate details, reviewer notes, skills and next-action review.

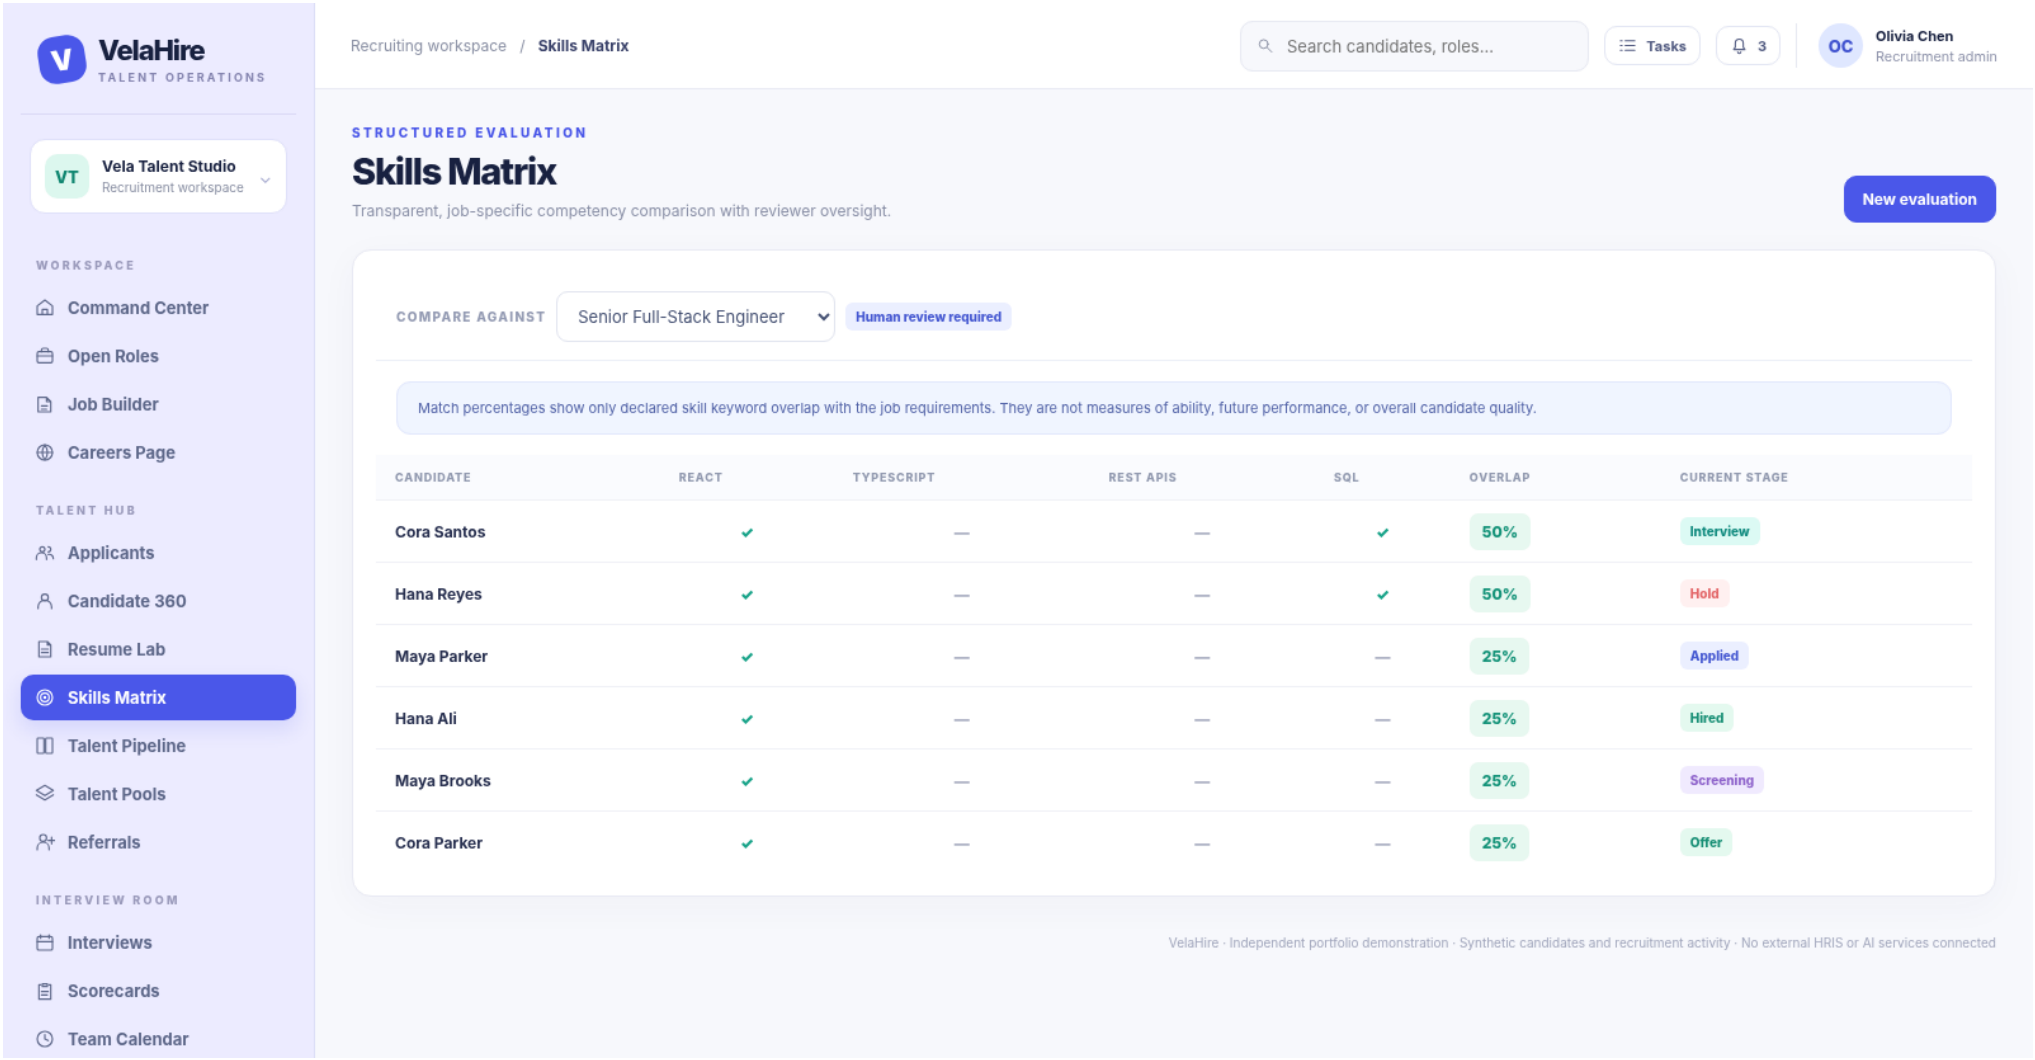

Resume Lab

Fictional CV preview with reviewable structured fields and keyword extraction demonstration.

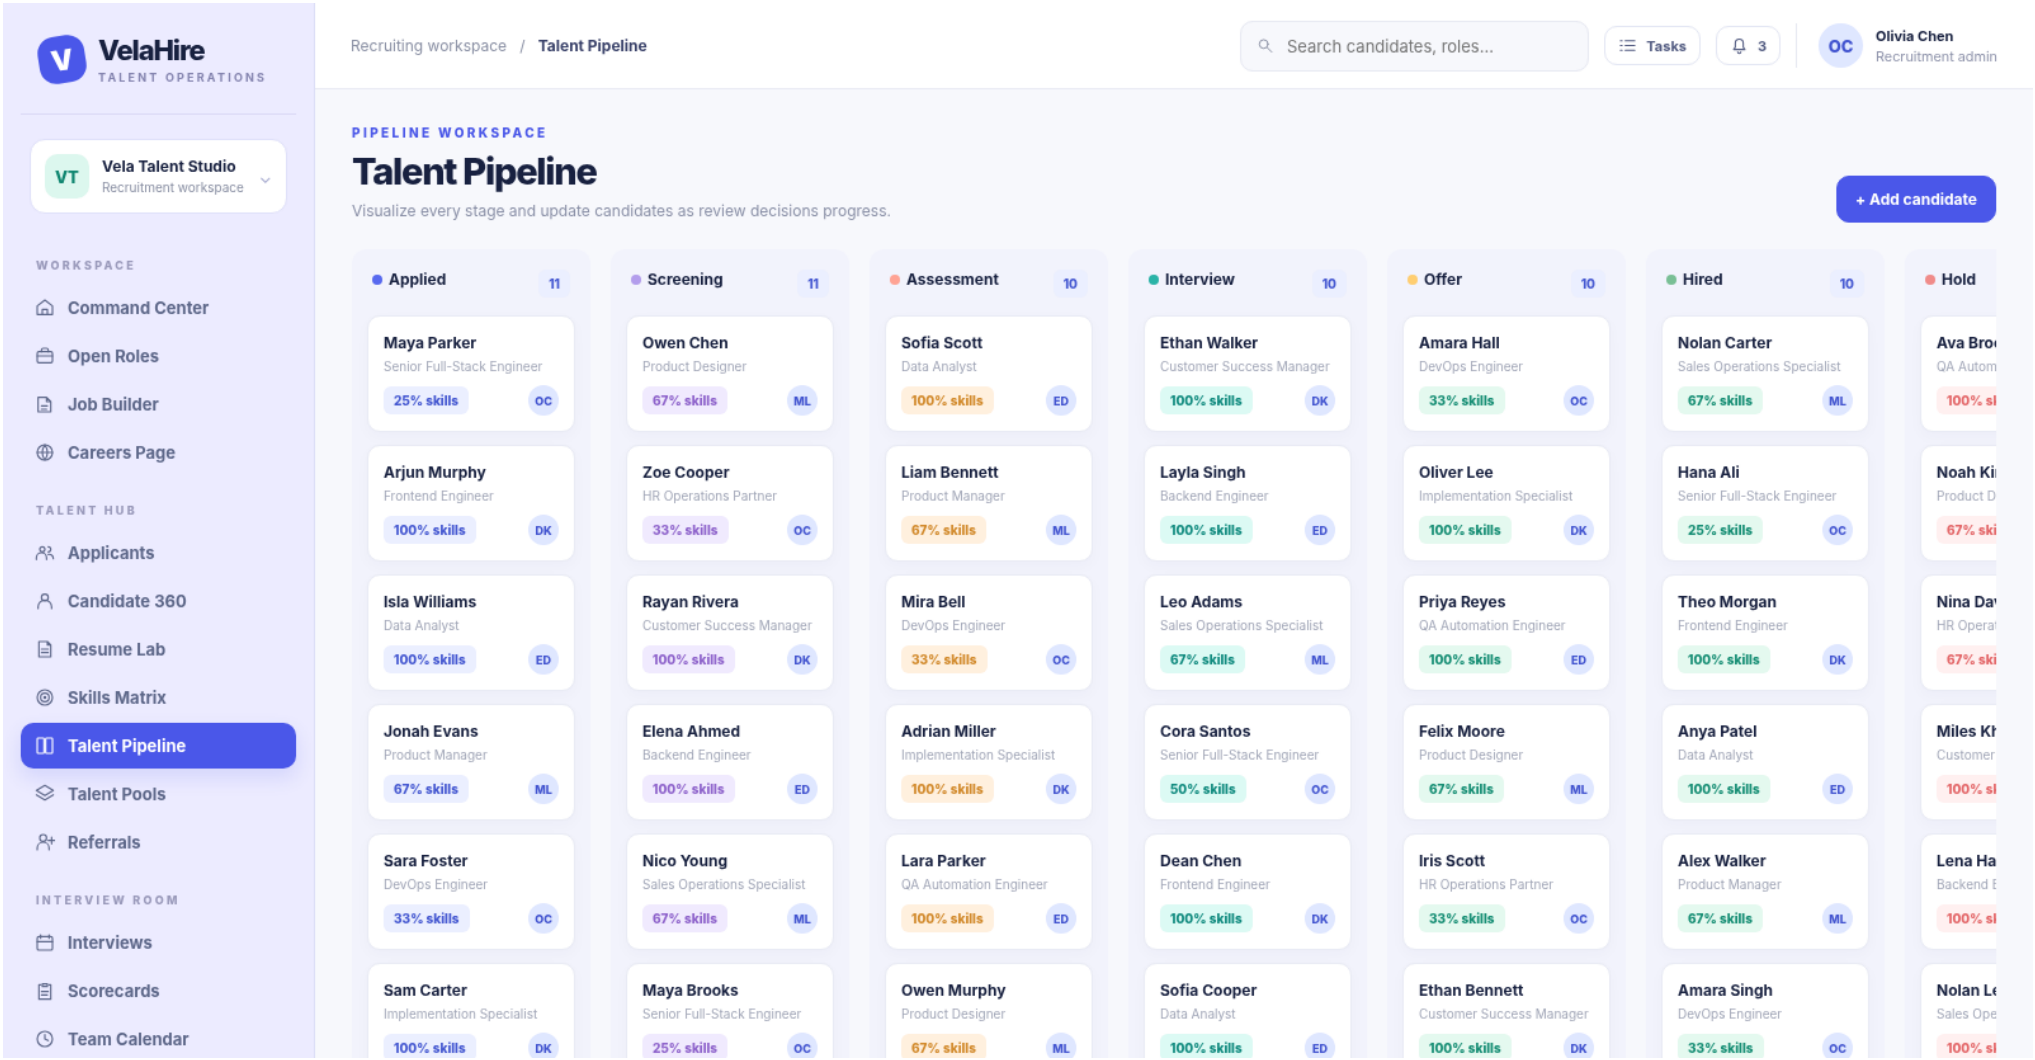

Skills Matrix

Job-specific required-skill comparison. Scores do not automate hiring decisions.

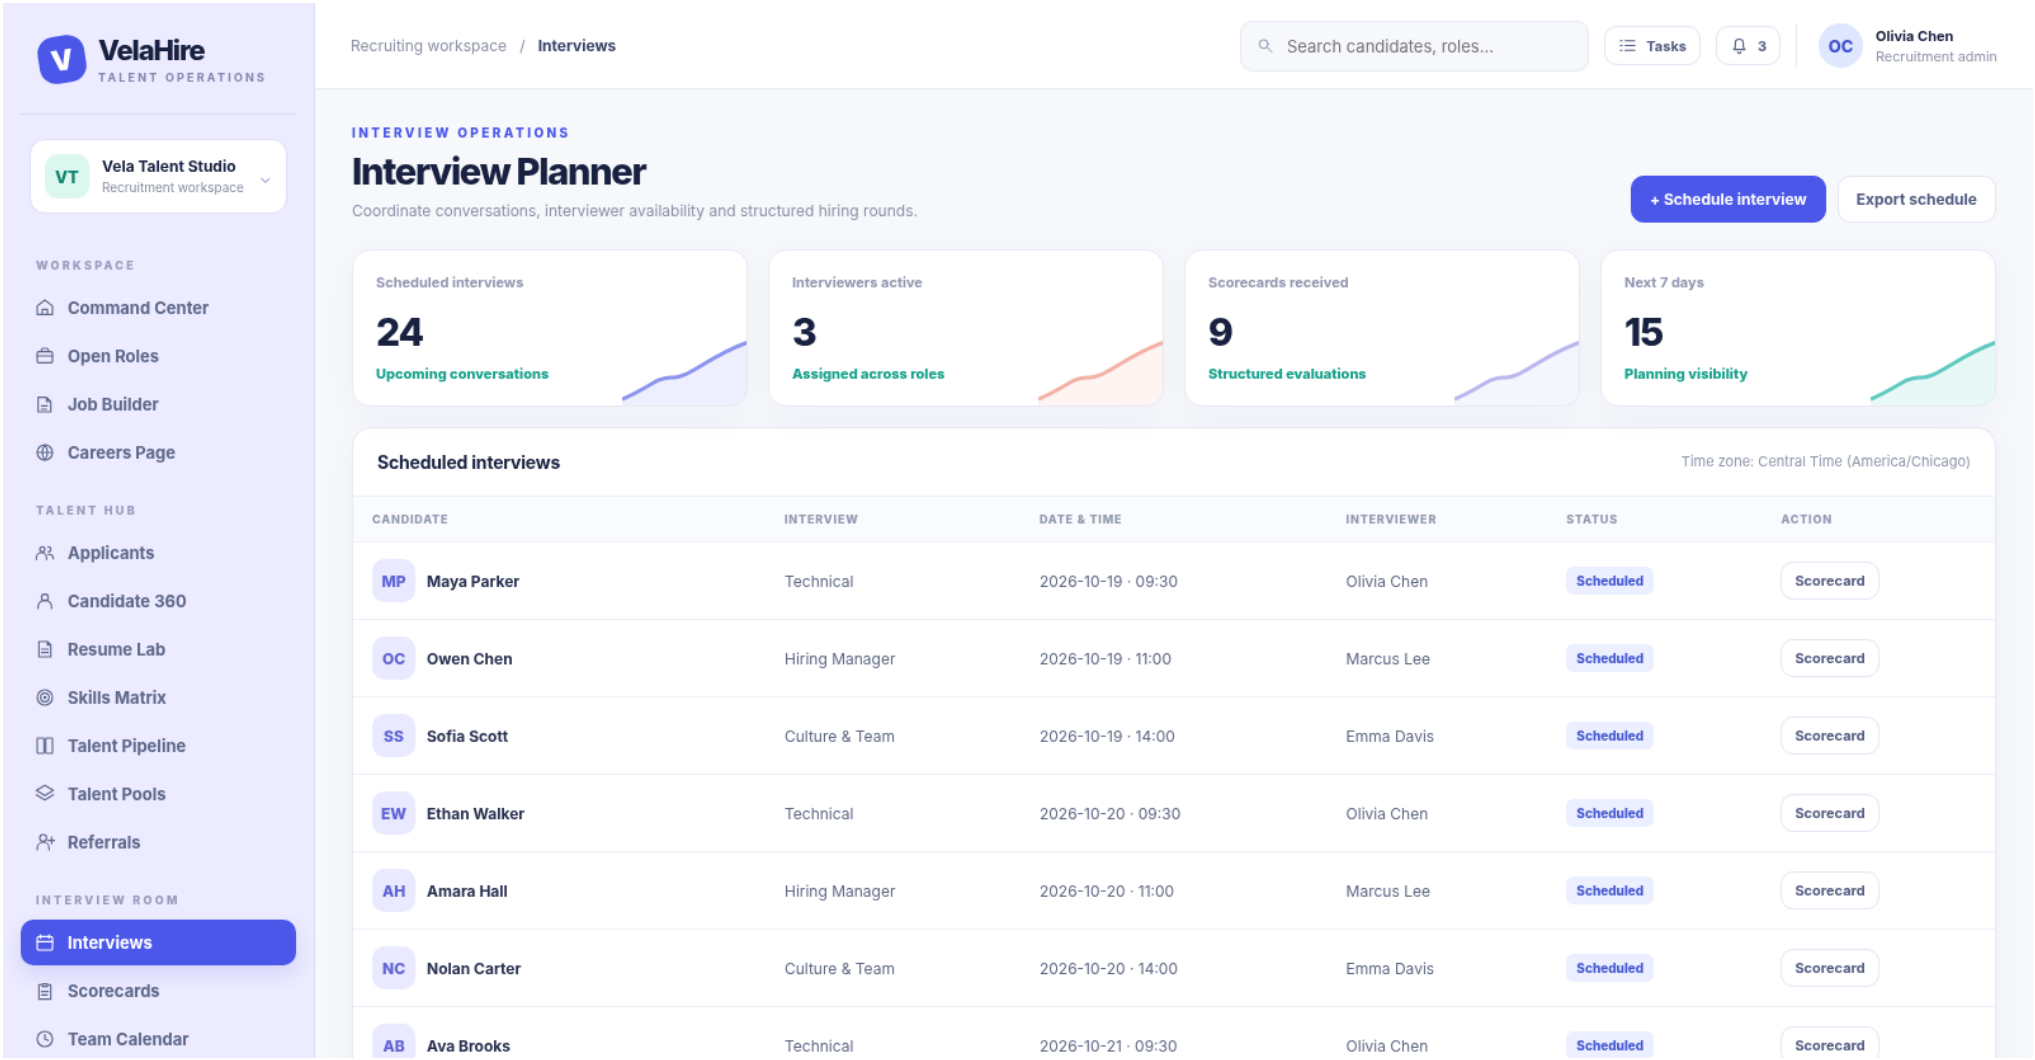

Talent Pipeline

Candidate Kanban board across recruiting stages and team ownership.

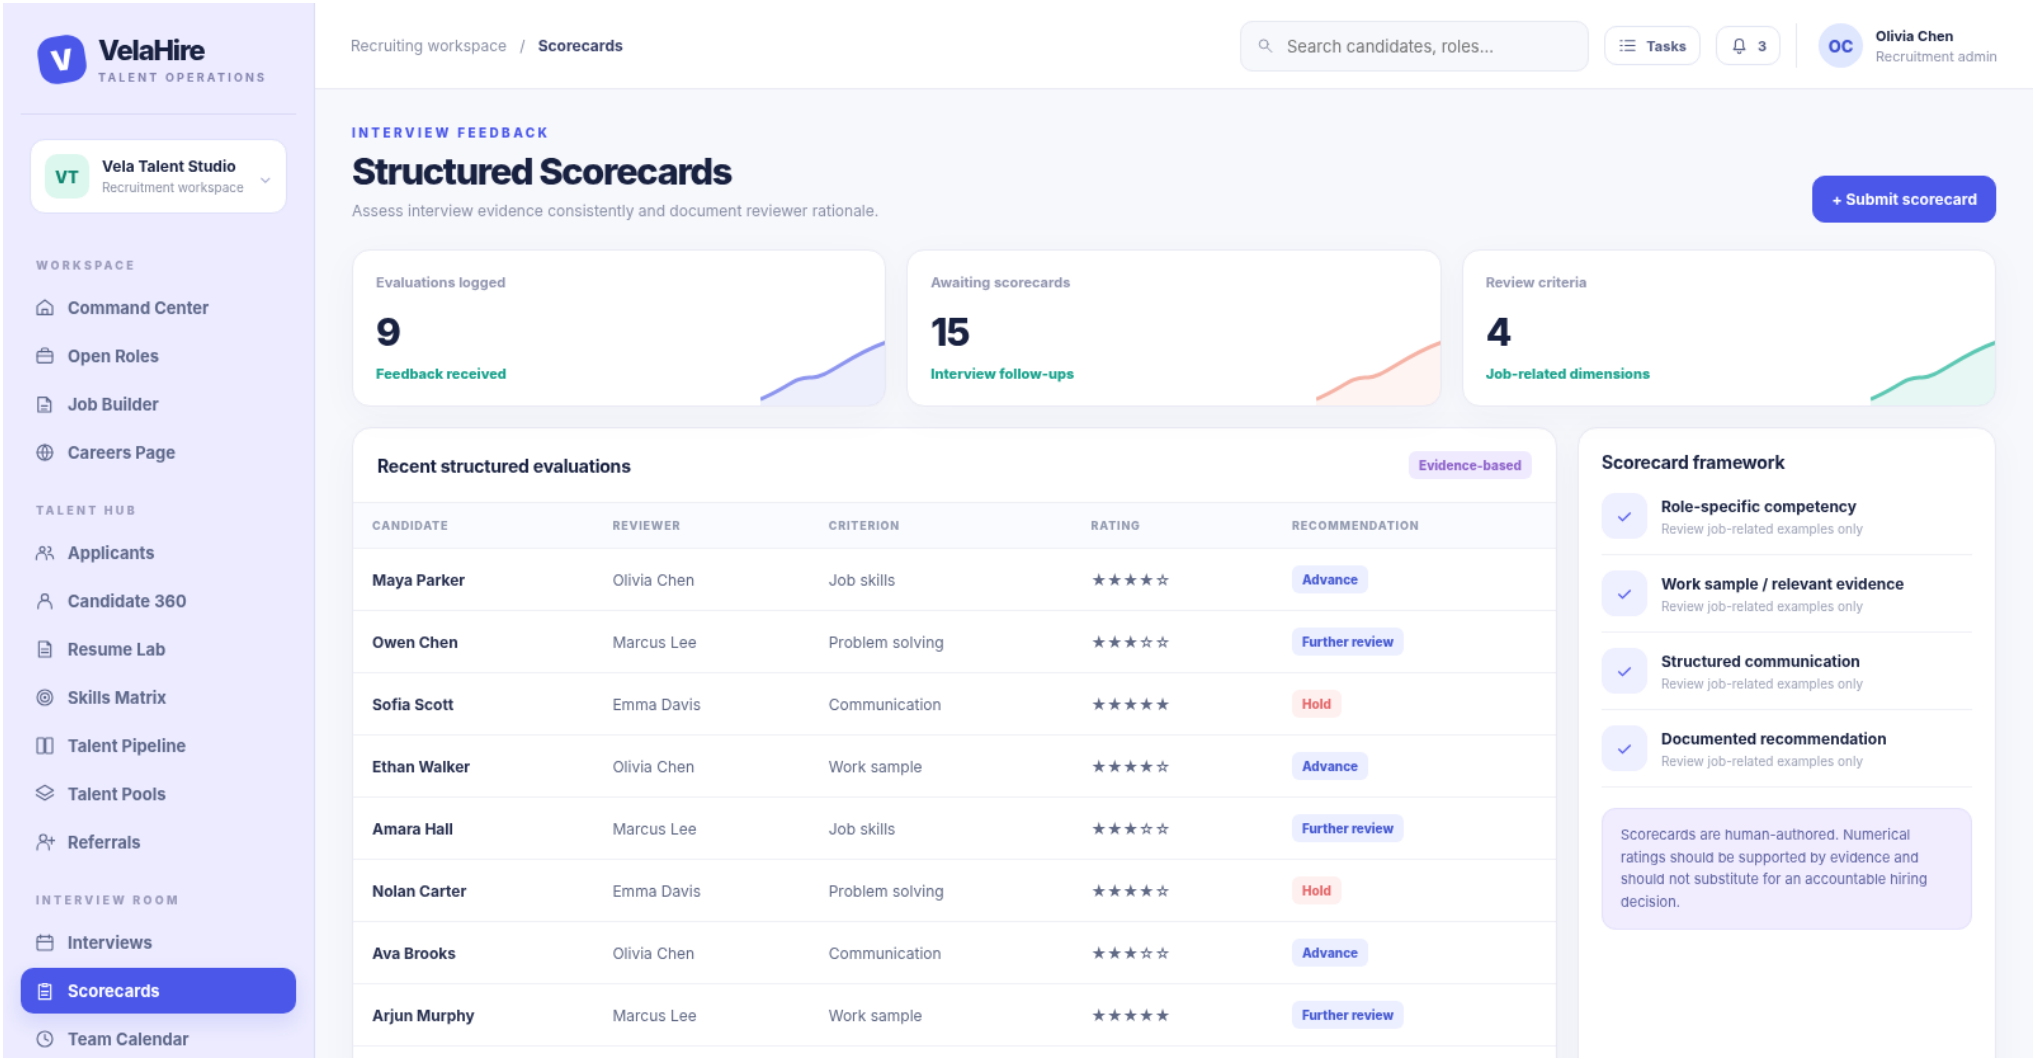

Interview Planner

Schedule interviews, assign interviewers and prevent booking conflicts.

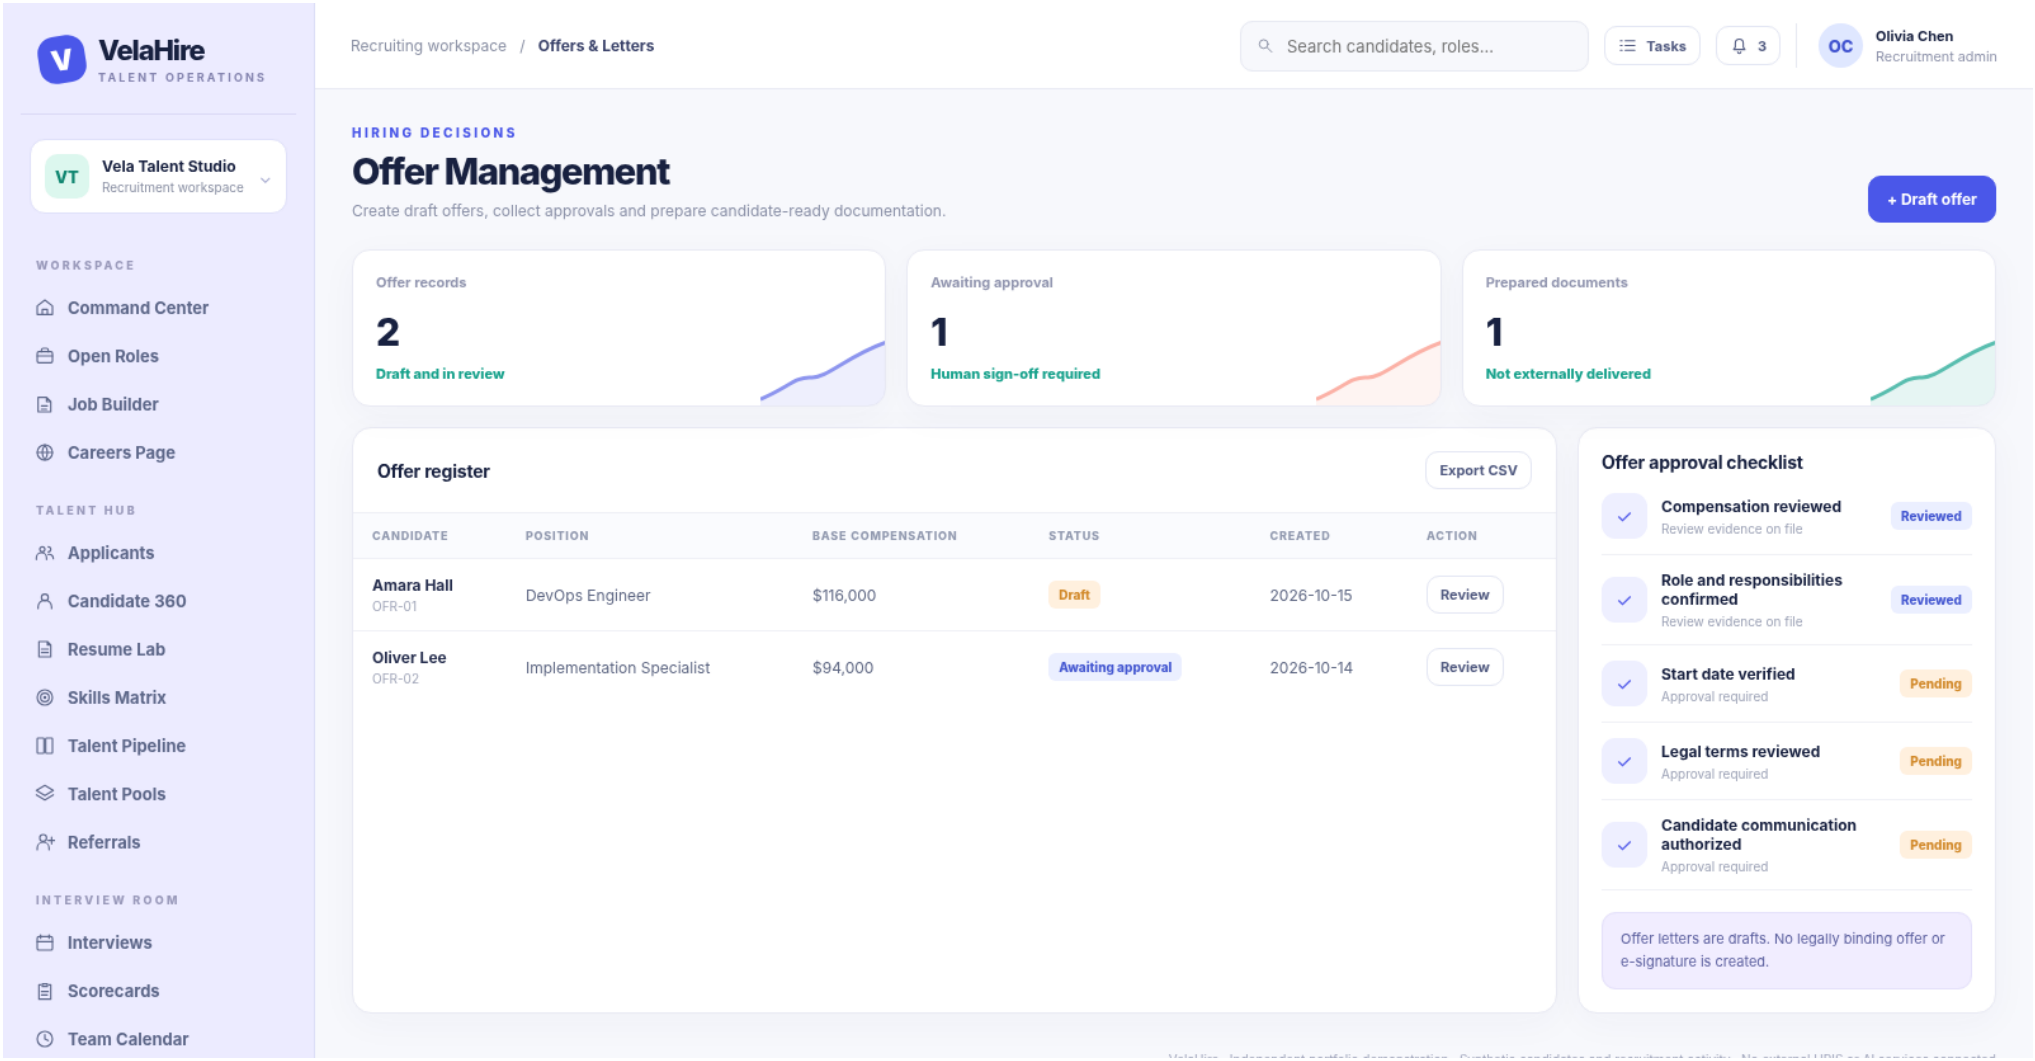

Structured Scorecards

Job-related criteria, reviewer comments and recorded recommendations.

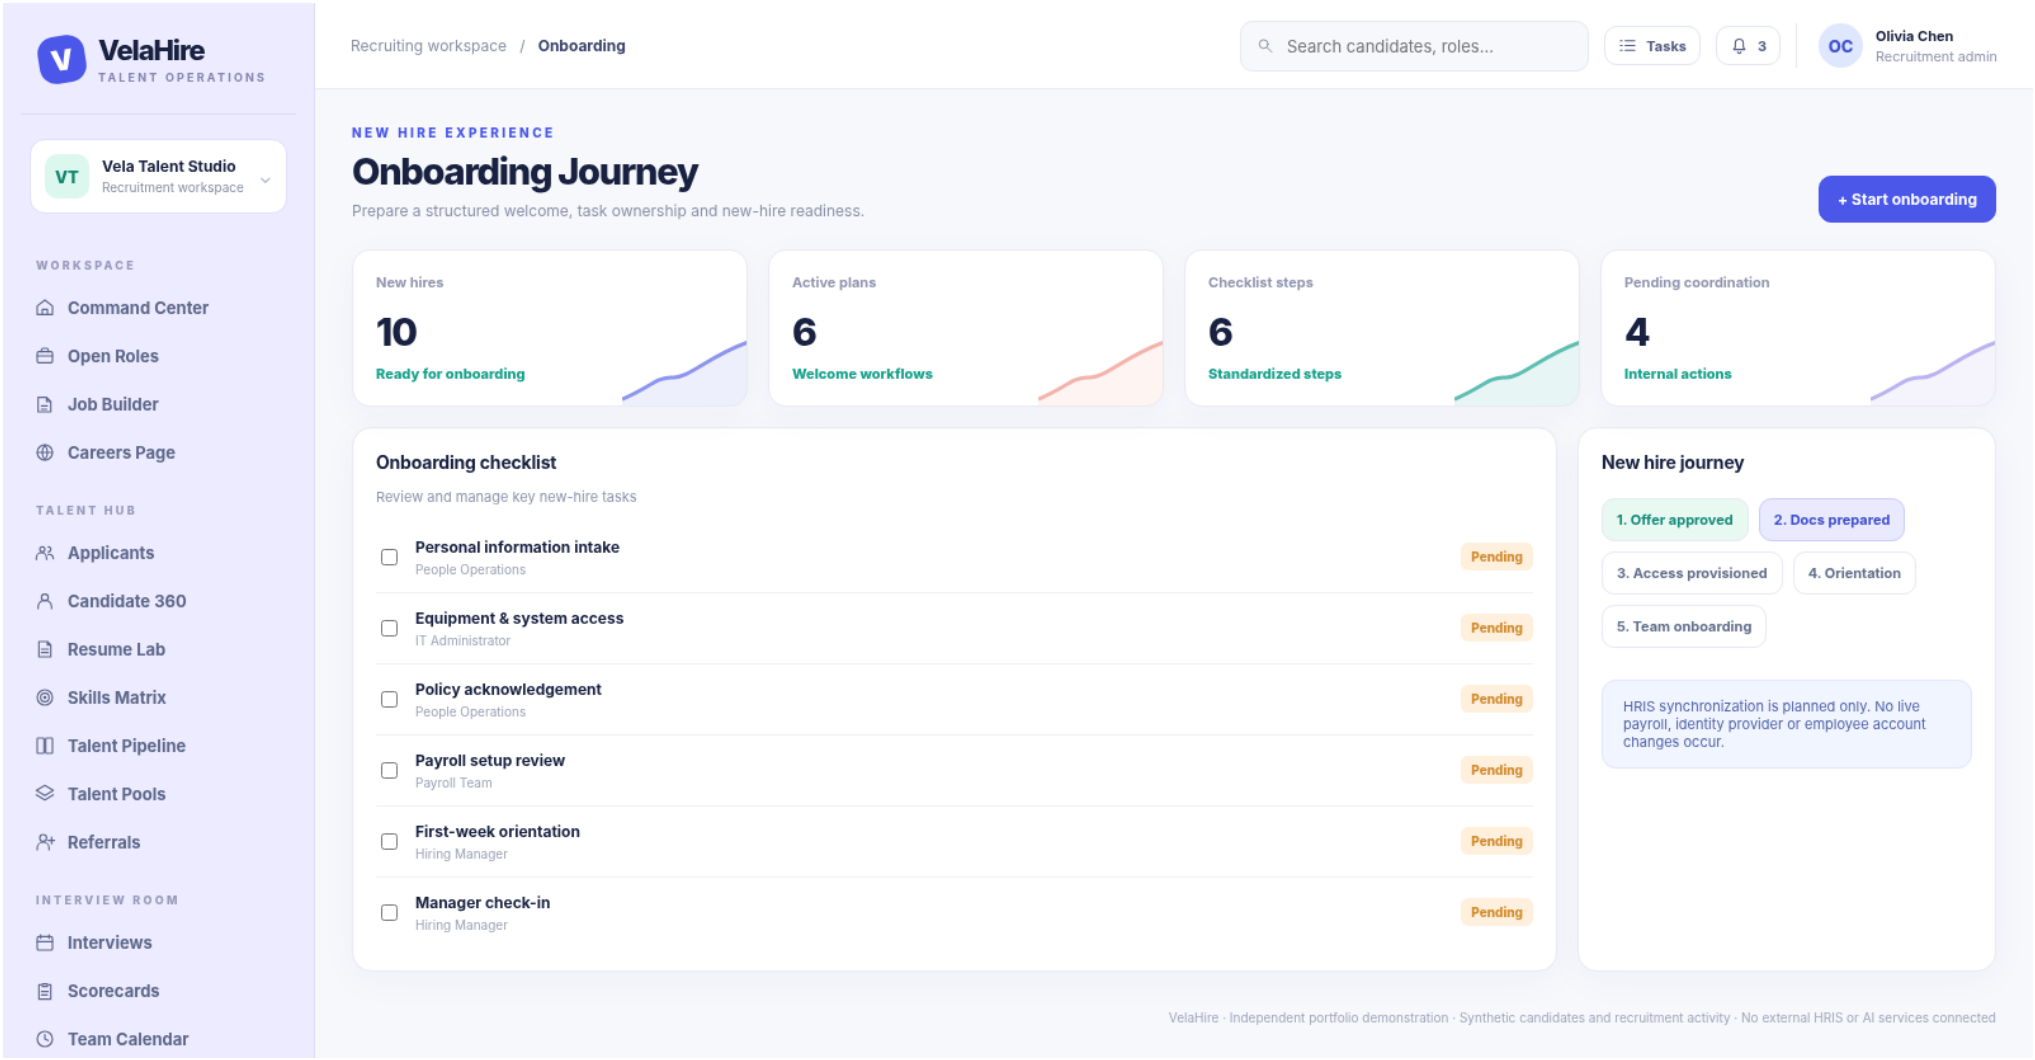

Offer Management

Compensation draft preparation, review status and authorization checks.

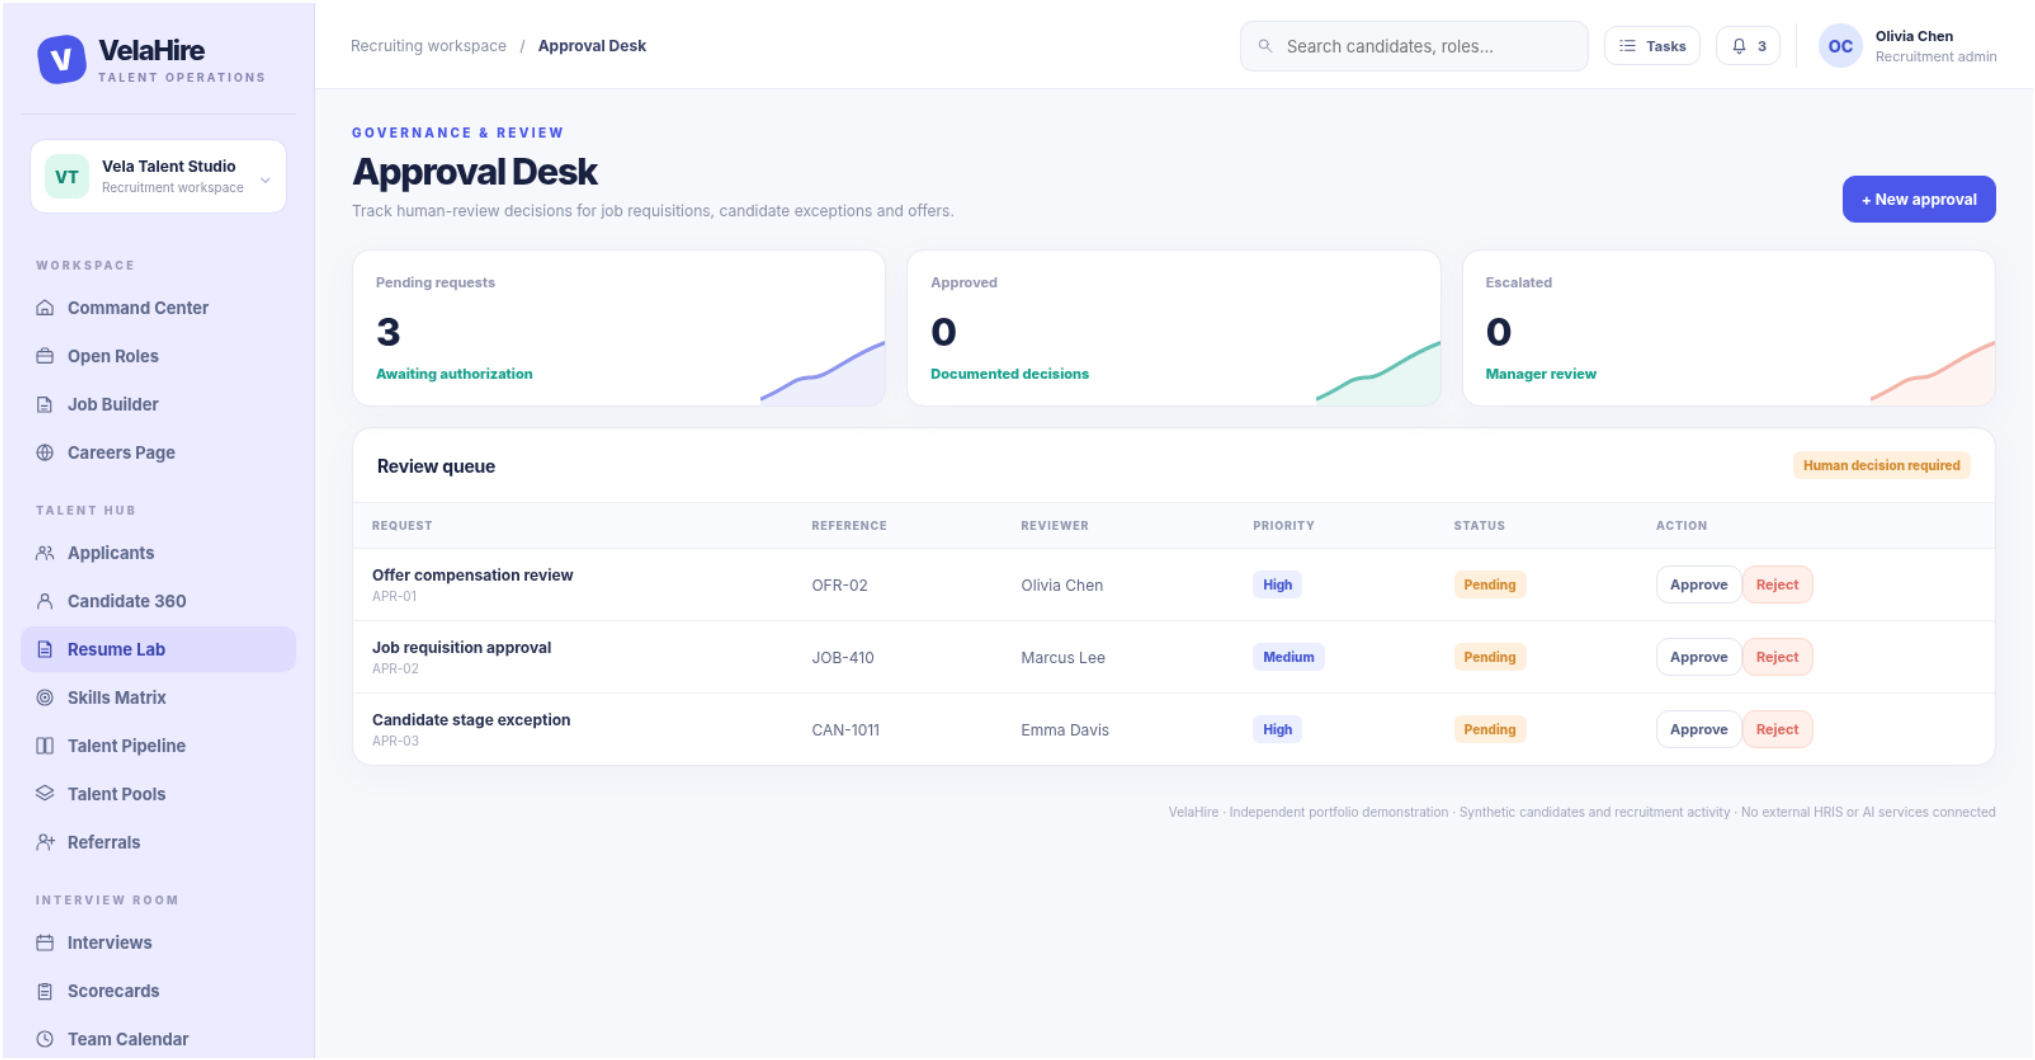

Onboarding Journey

New-hire checklist, owners, handoff steps and task completion.

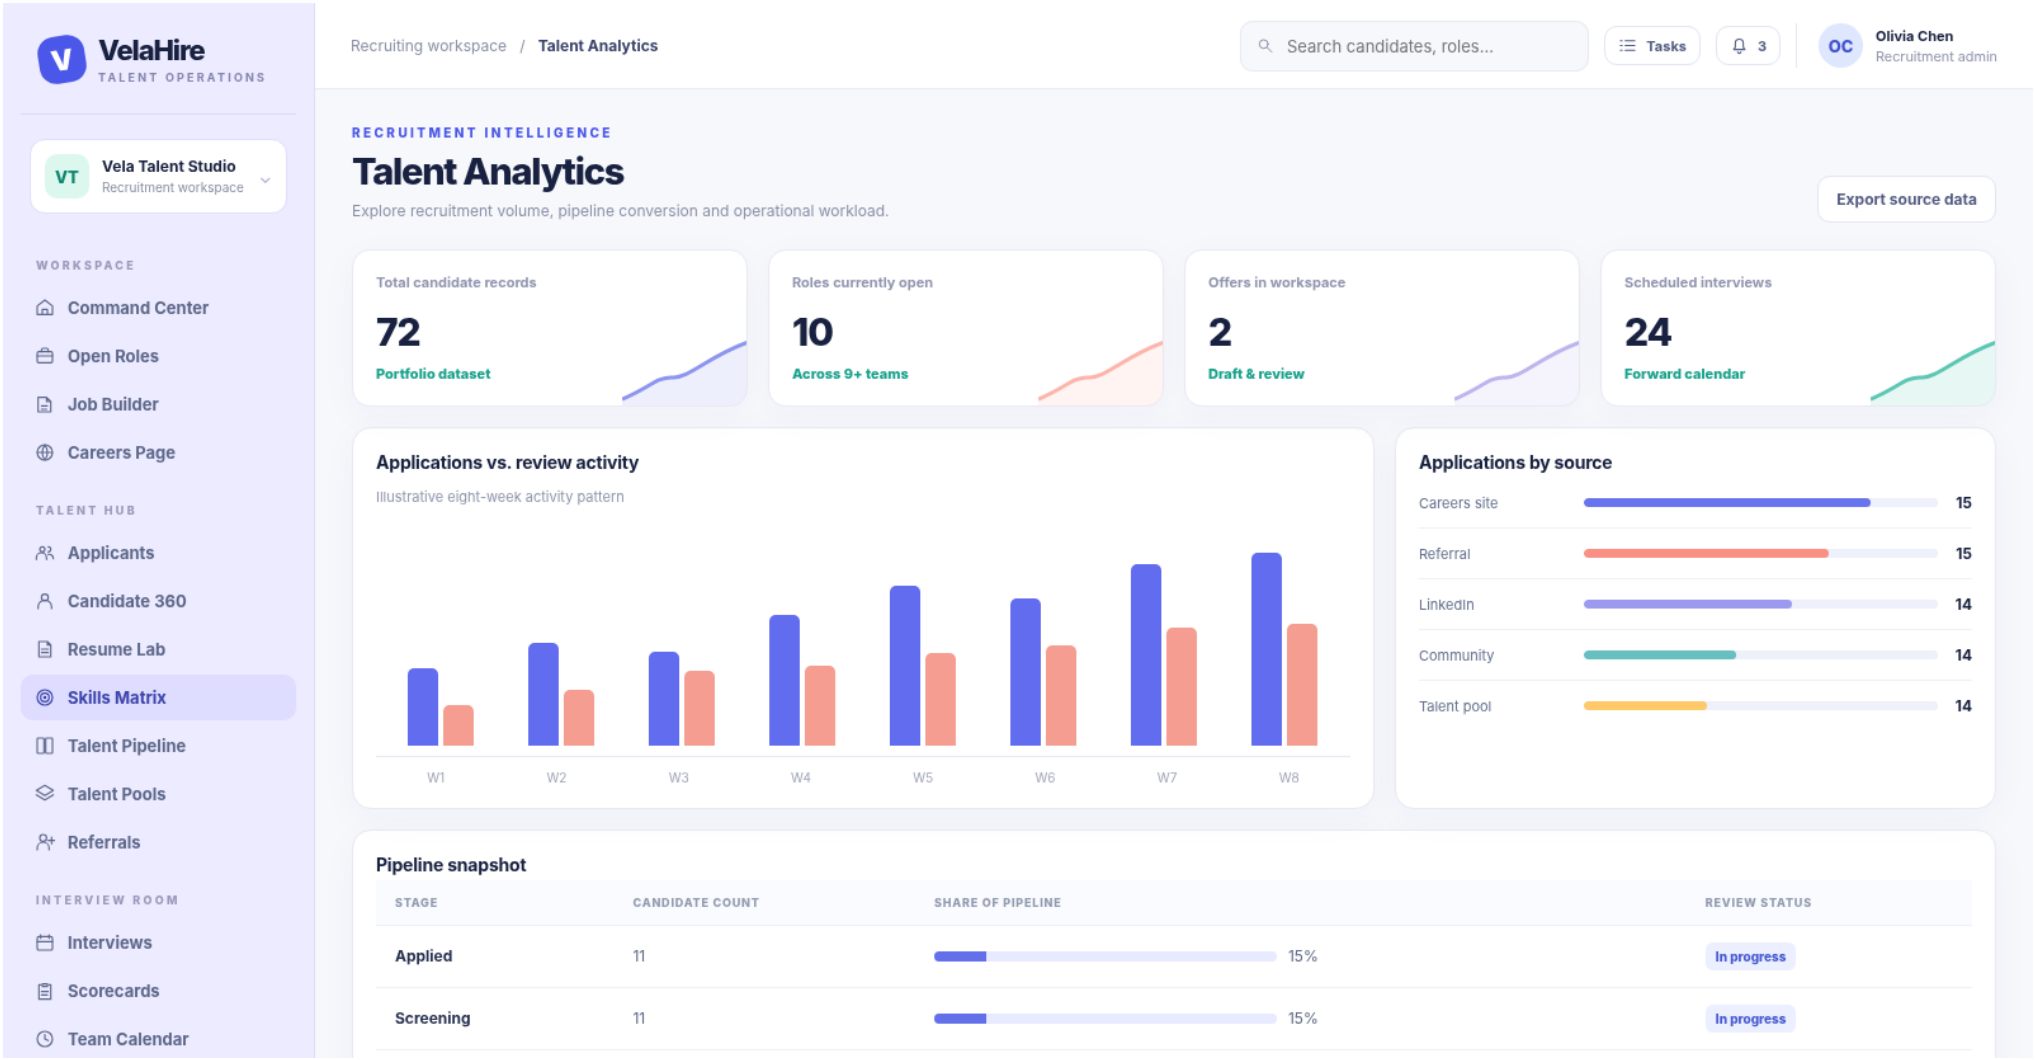

Approval Desk

Human sign-off requests for requisitions, offers and exceptions.

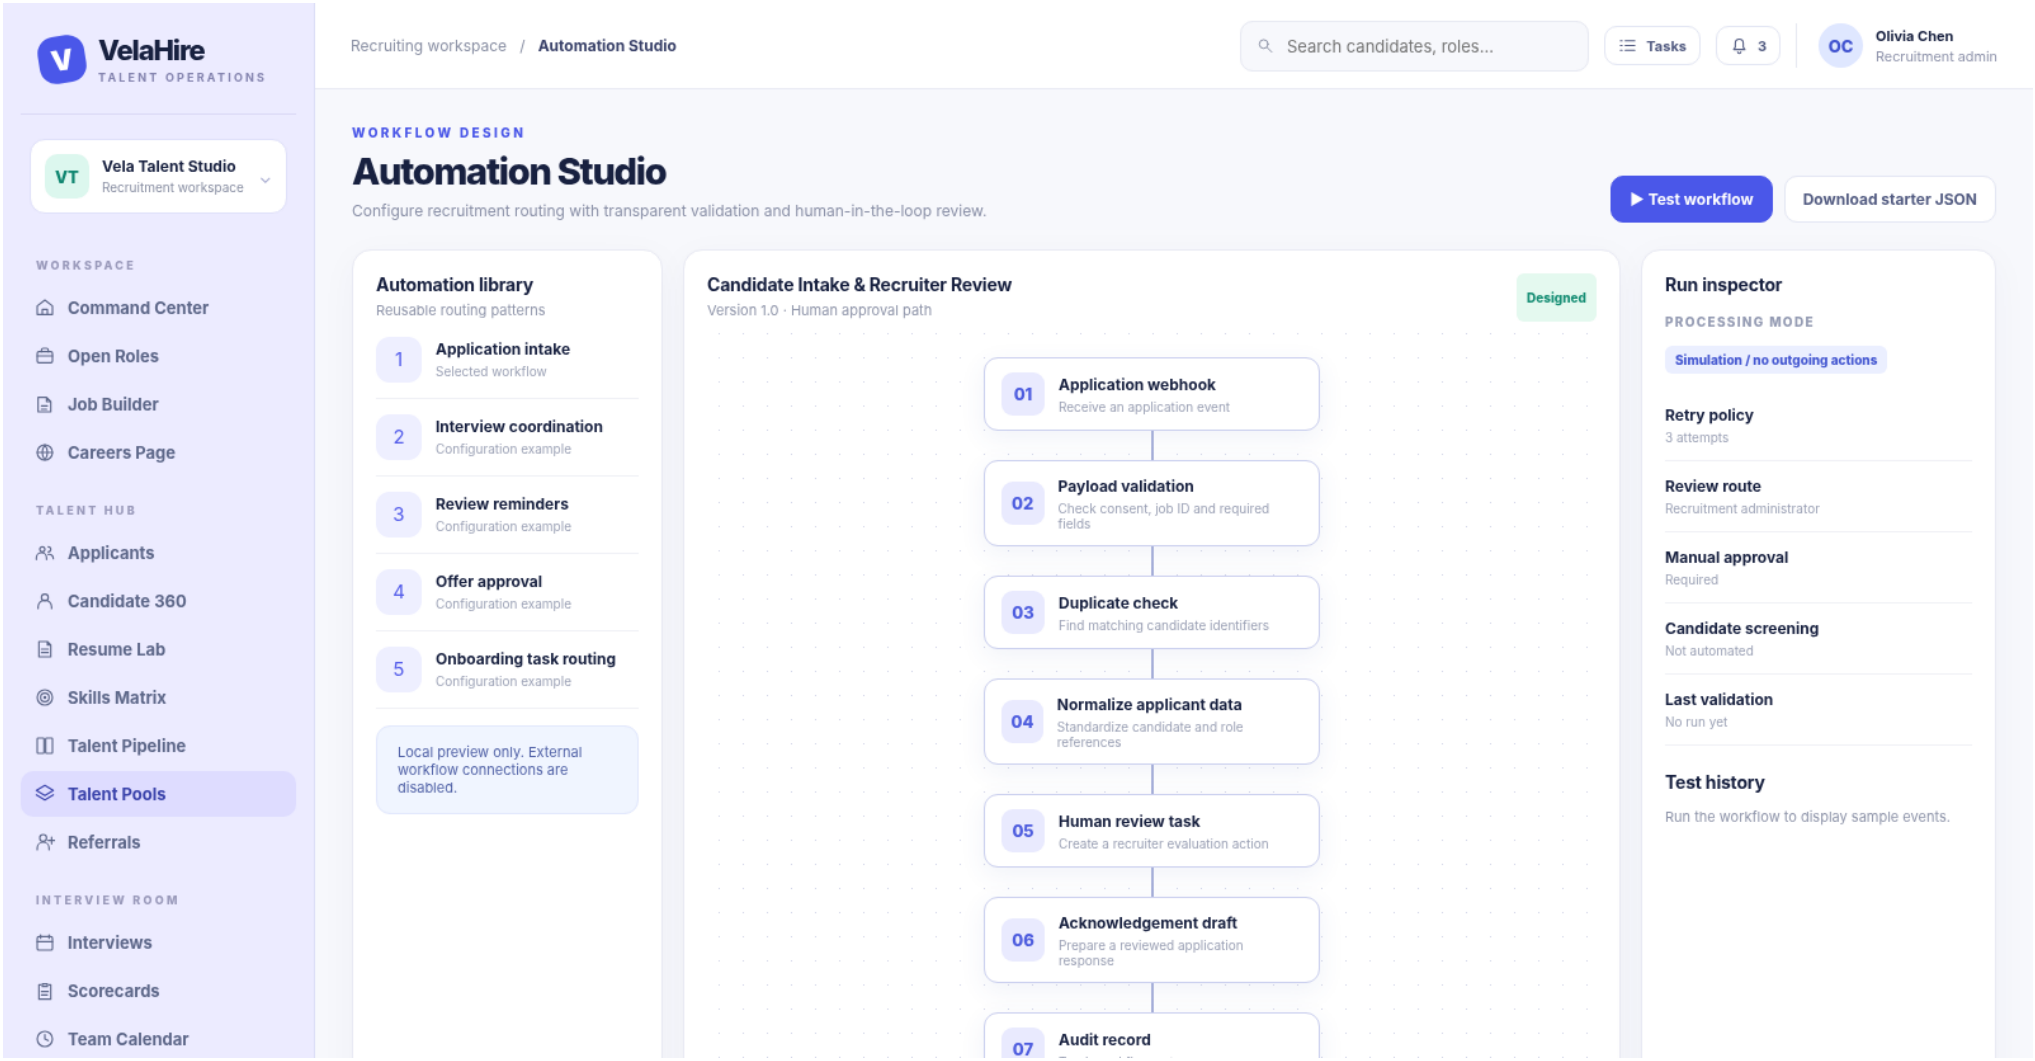

Talent Analytics

Application volume, source breakdown and pipeline health.

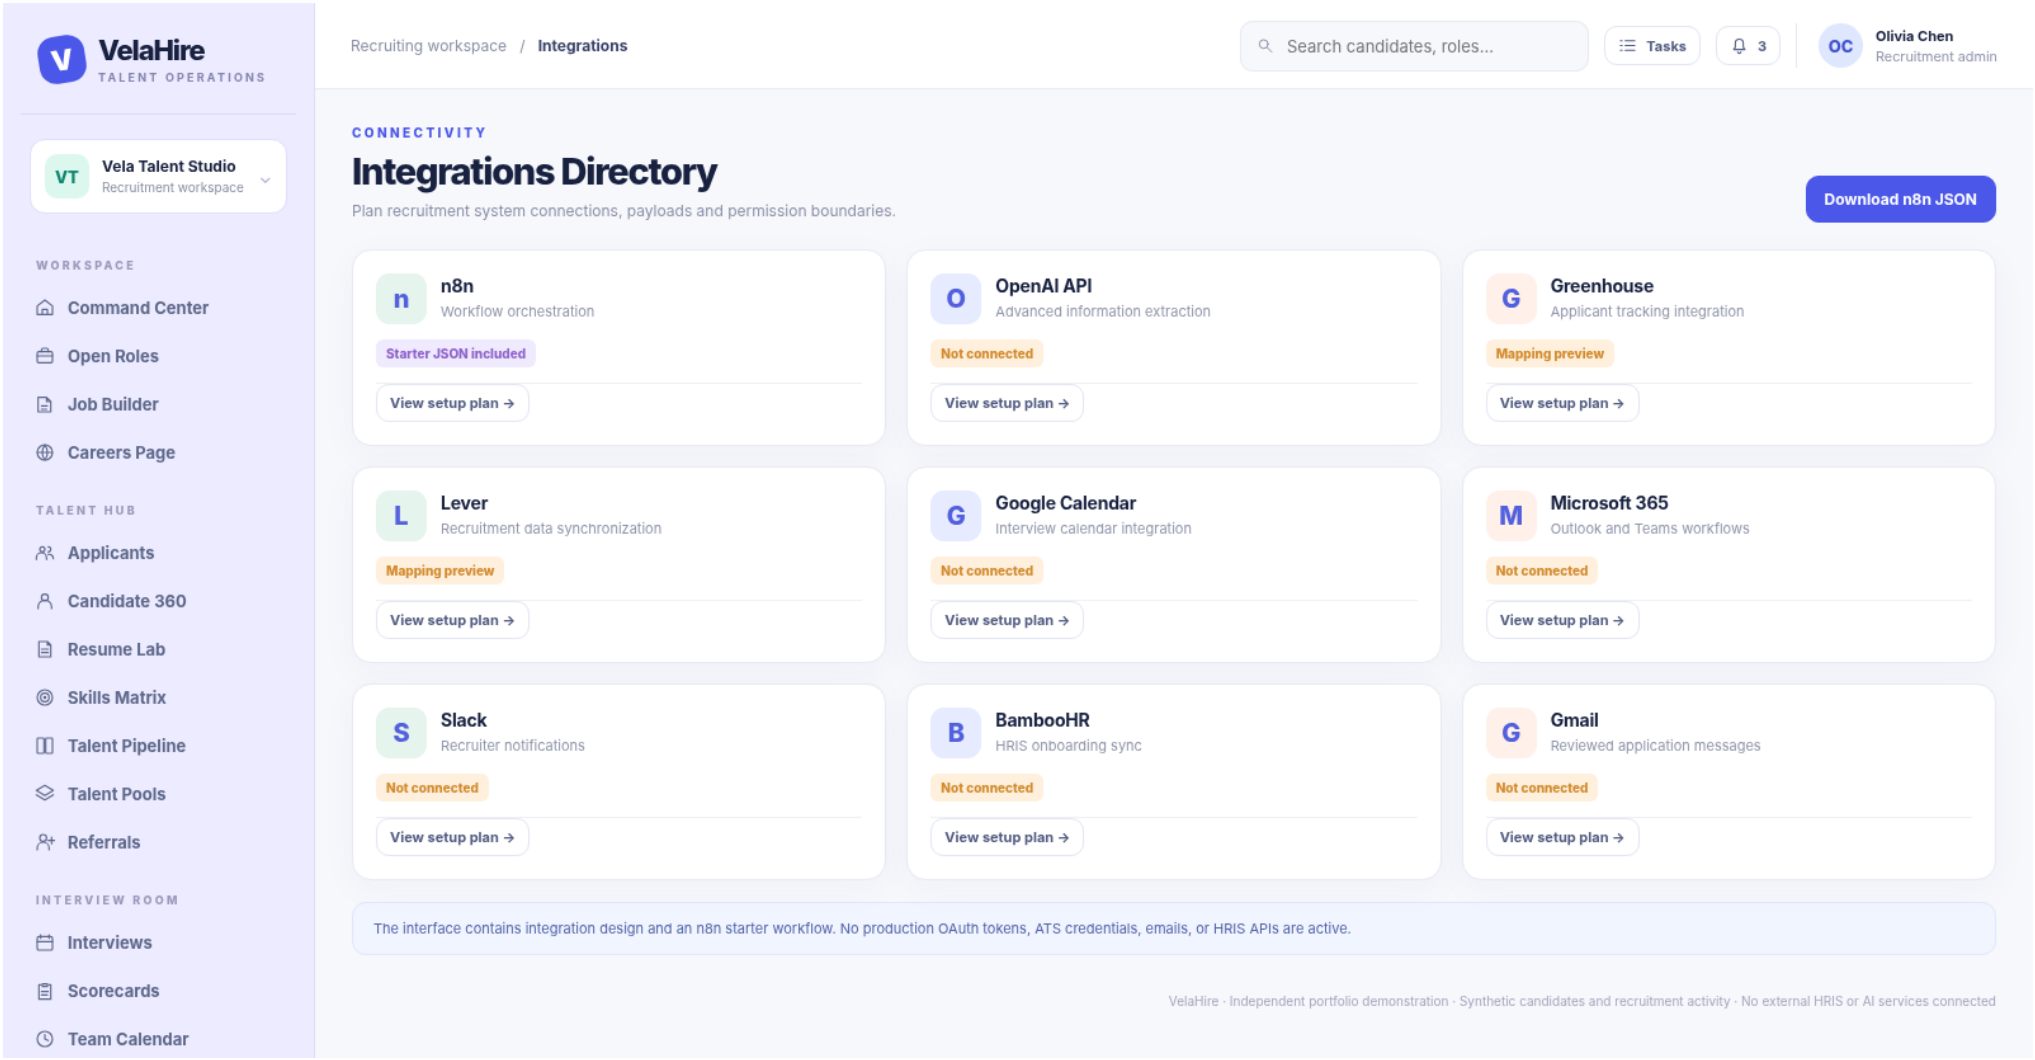

Automation Studio

Visual workflow for intake, validation, review routing and audit outcomes.

Integrations Directory

Planned n8n, OpenAI, ATS, HRIS and calendar interfaces. No live connections.

27 connected workspace modules

Workspace	Command Center, Open Roles, Job Builder, Careers Page
Candidate operations	Applicants, Candidate 360, Resume Lab, Skills Matrix, Talent Pipeline, Talent Pools, Referrals
Interviews	Interviews, Scorecards, Team Calendar, Conversations, Message Templates
Hiring	Offers & Letters, Onboarding, Approval Desk, Tasks & SLAs
Operations	Talent Analytics, Quality Controls, Automation Studio, Integrations
Administration	Activity History, Team & Roles, Workspace Settings

Browser-tested interactions

PASS	All 27 modules render without JavaScript page errors	PASS	Record human approval decision
PASS	Create fictional candidate and linked record	PASS	Generate local workflow validation run
PASS	Change candidate pipeline stage with written rationale	PASS	Save workspace settings
PASS	Schedule interview and reject duplicate interviewer slot	PASS	Update onboarding checklist
PASS	Submit a structured interview scorecard	PASS	Create offer draft
PASS	Complete assigned recruitment task	PASS	Export CSV and download n8n starter JSON

All tests executed in a local browser session with the standalone frontend.
