AI BUSINESS OPERATIONS AGENT

OrbitOps

Controlled decisions. Unified work. Clear execution.

- Agent-assisted operating workspace
- Human-reviewed workflow approvals
- 29 connected product modules
- Interactive HTML and auditable local records

PORTFOLIO CASE STUDY

Concept demonstration · 16 October 2026

The operating problem

Growing teams work across disconnected requests, finance controls, CRM records, supplier processes and service queues. Important decisions become hard to track, with limited visibility into ownership and approvals.

Project objective

Demonstrate a unified command environment that organizes work, retrieves local evidence, supports controlled agent responses, and records human-review decisions.

Solution approach

Create connected data views for cross-functional operations, an evidence-linked copilot, review queues, workflow simulations, analytics and an execution trail.

AGENT ROLES

82

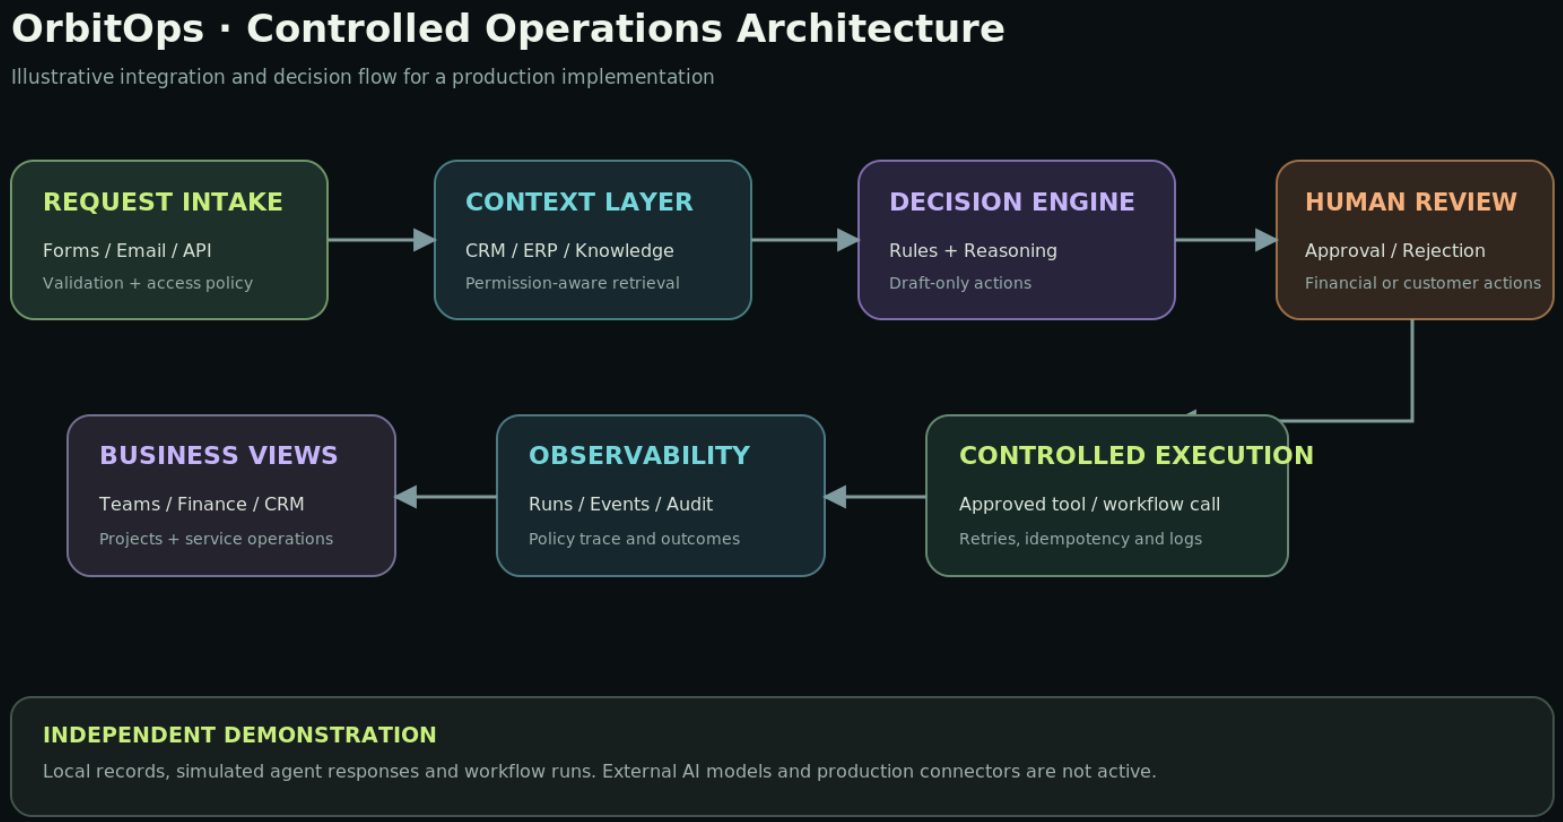

OPERATING REQUESTS

19

APPROVAL ITEMS

Human-reviewed orchestration model

A production design separates incoming requests, business context, decision drafting, human approval, controlled integrations and auditability. The current demo implements browser-local simulations only.

Command Center

Shared request, approval and workflow visibility

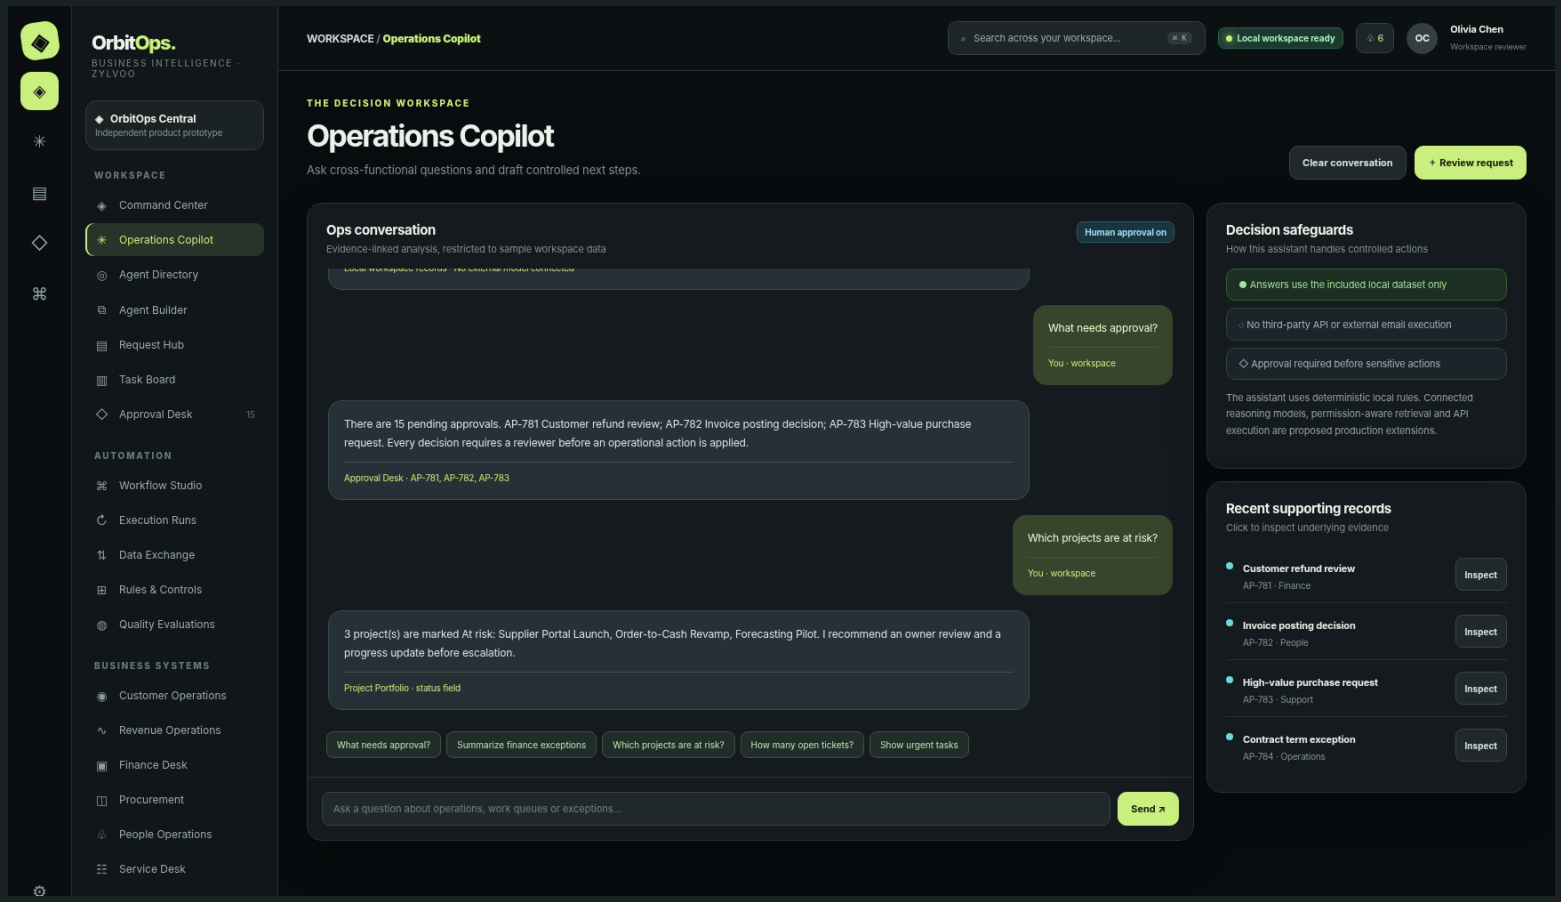

FEATURE HIGHLIGHT

Decision queue, operating trends, department load and activity signals.

Operations Copilot

Ask cross-team questions with supporting record references

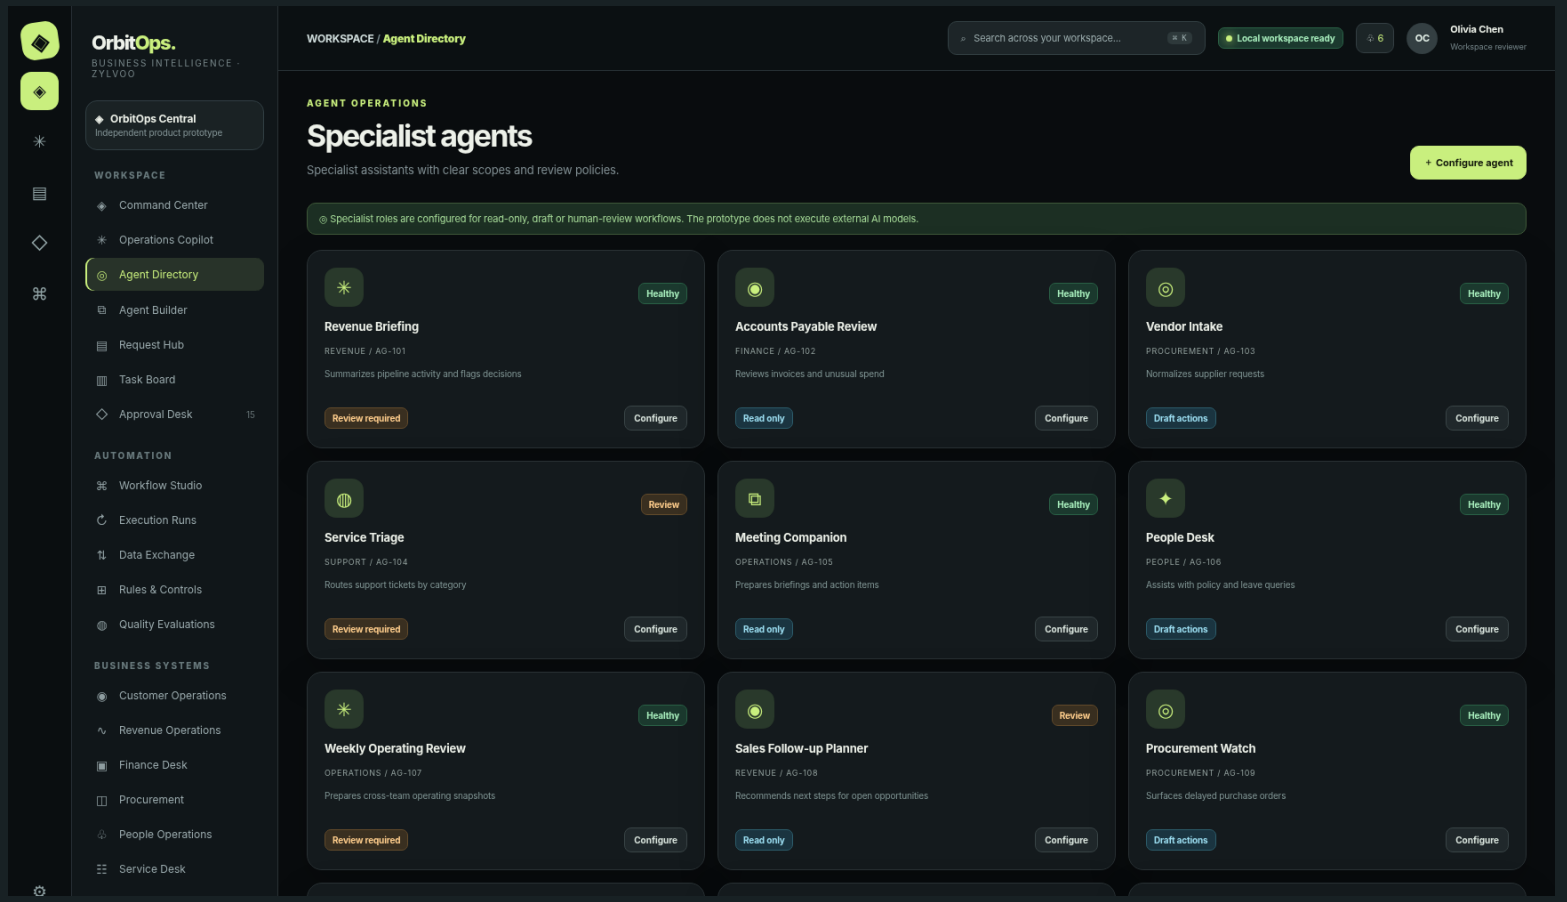

FEATURE HIGHLIGHT

Deterministic local responses for approvals, tasks, project risks and finance exceptions.

Agent Directory

Specialist roles with scoped execution policies

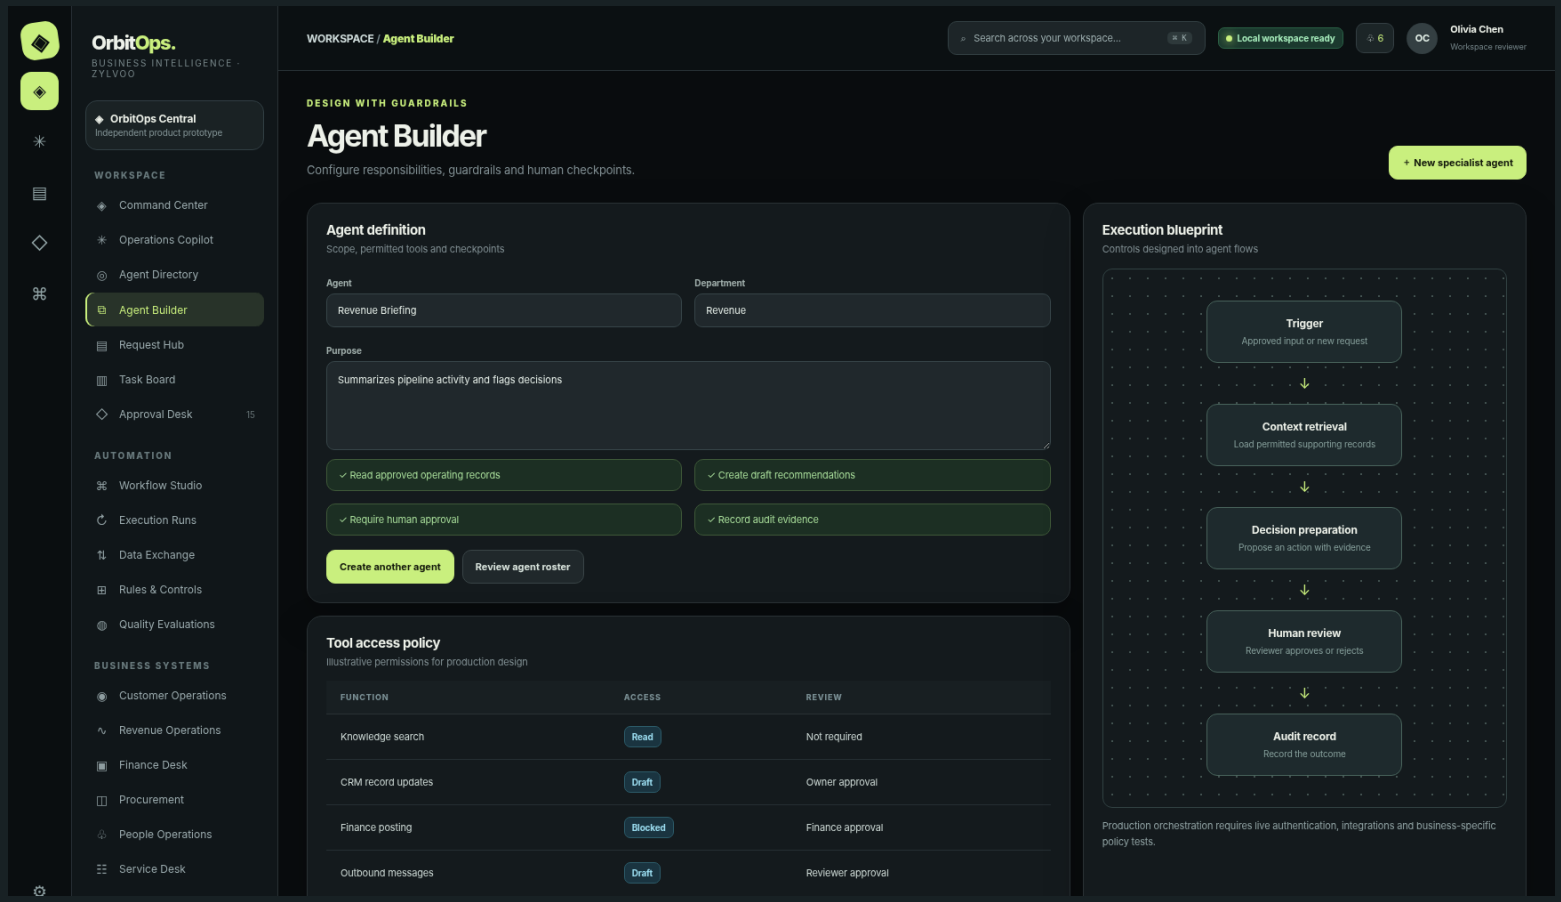

FEATURE HIGHLIGHT

Twelve department-specific agents, with modes for read-only, draft or review.

Agent Builder

Design an accountable agent configuration

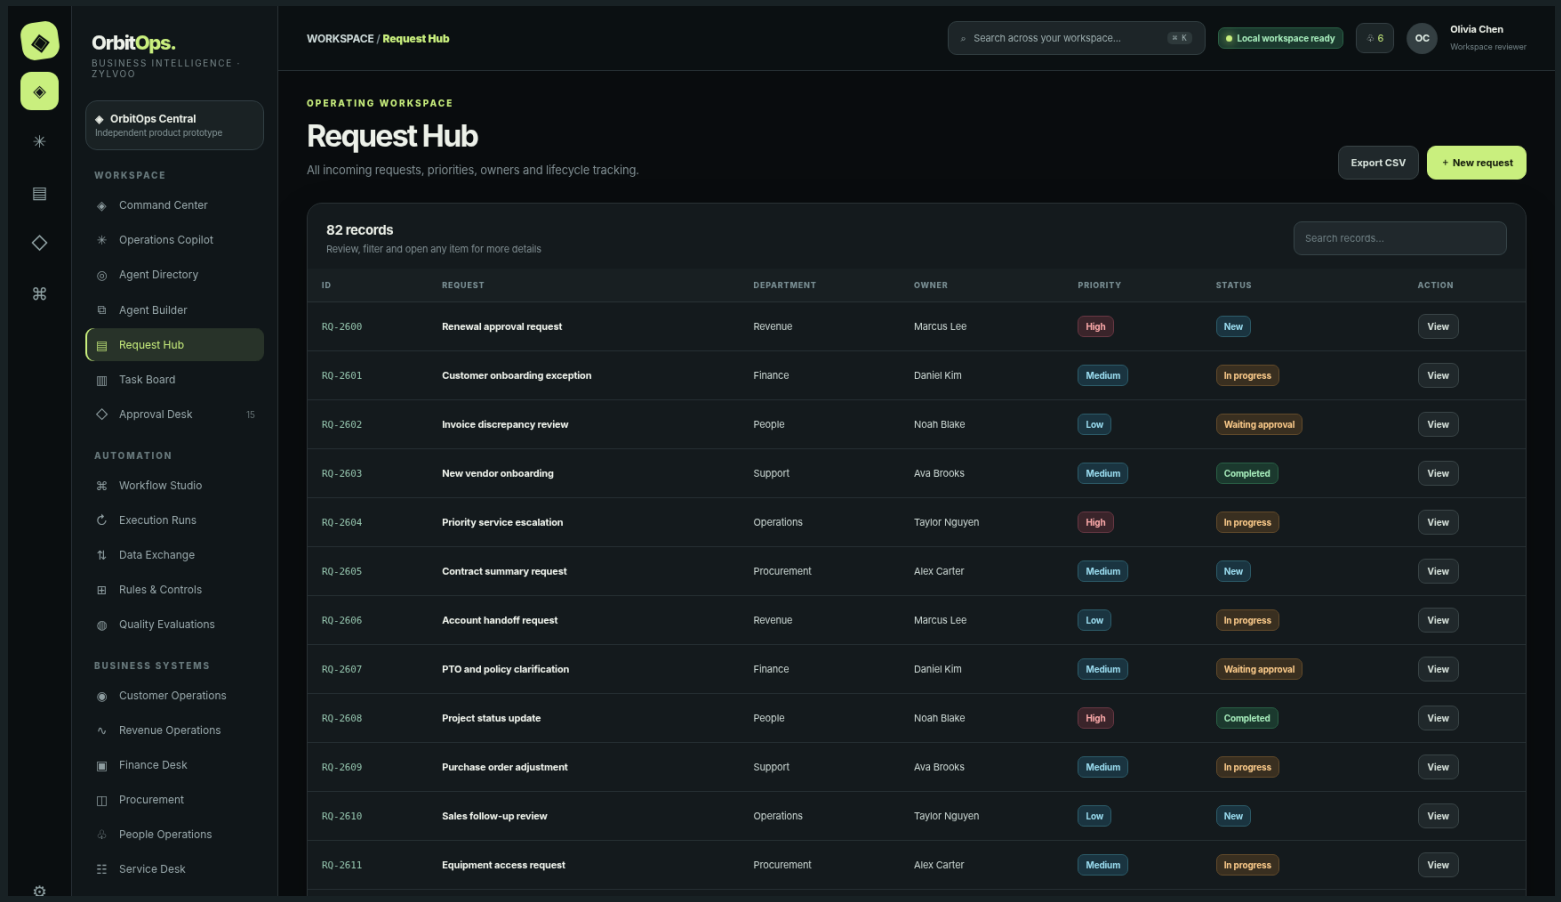

FEATURE HIGHLIGHT

Scope, allowed actions, review checkpoints and permission blueprint.

Request Hub

Request intake and lifecycle visibility

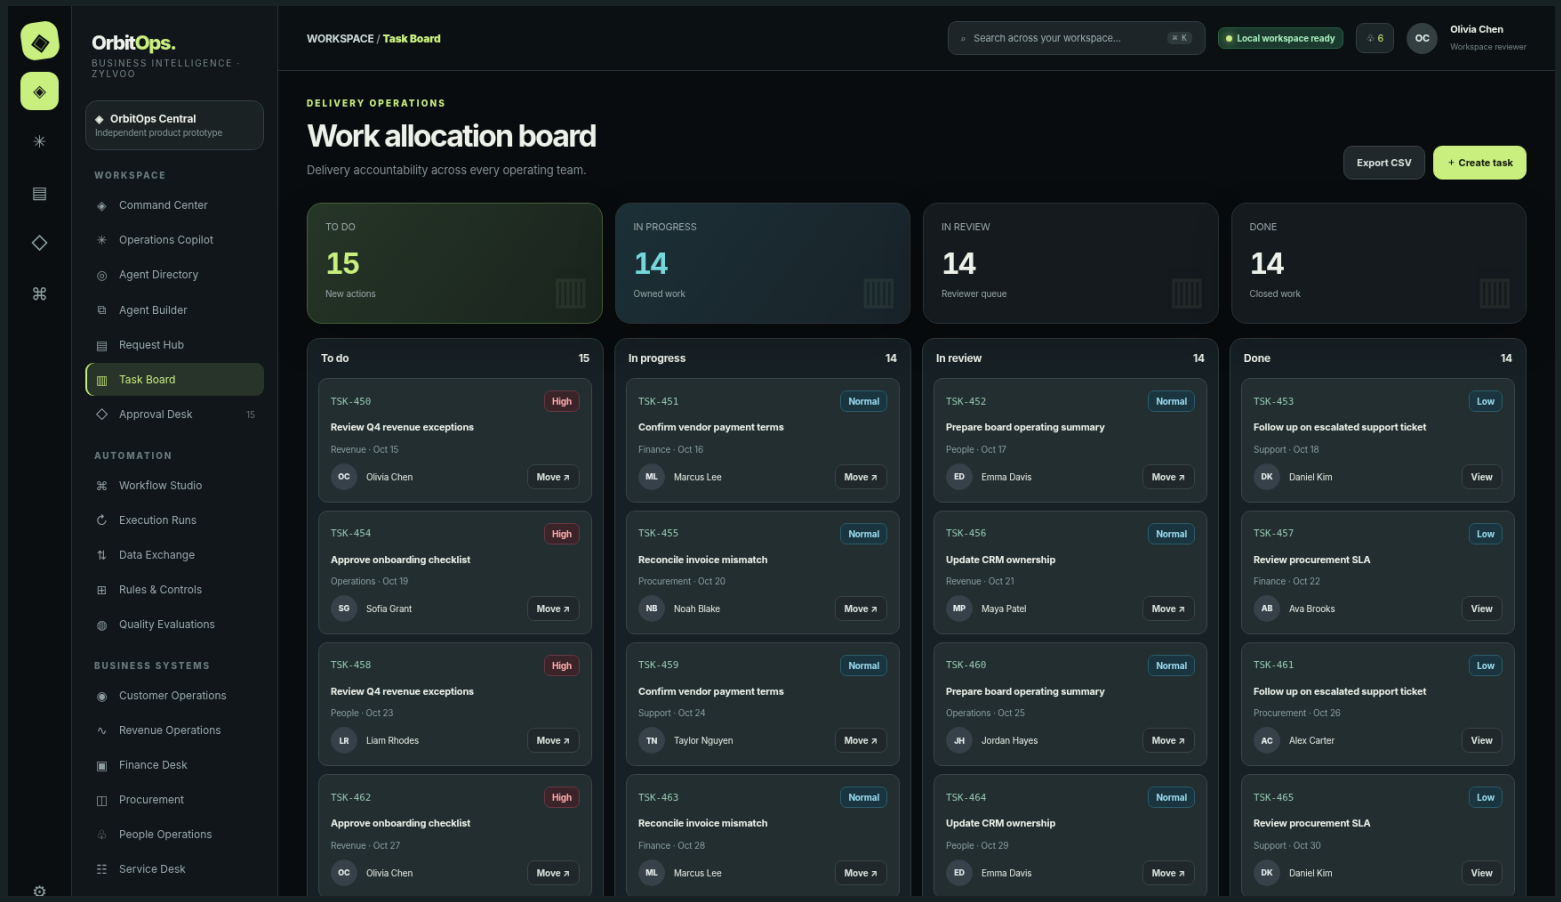

FEATURE HIGHLIGHT

Linked ownership, priorities, search, filters and status updates.

Task Board

Multi-team Kanban with operational action controls

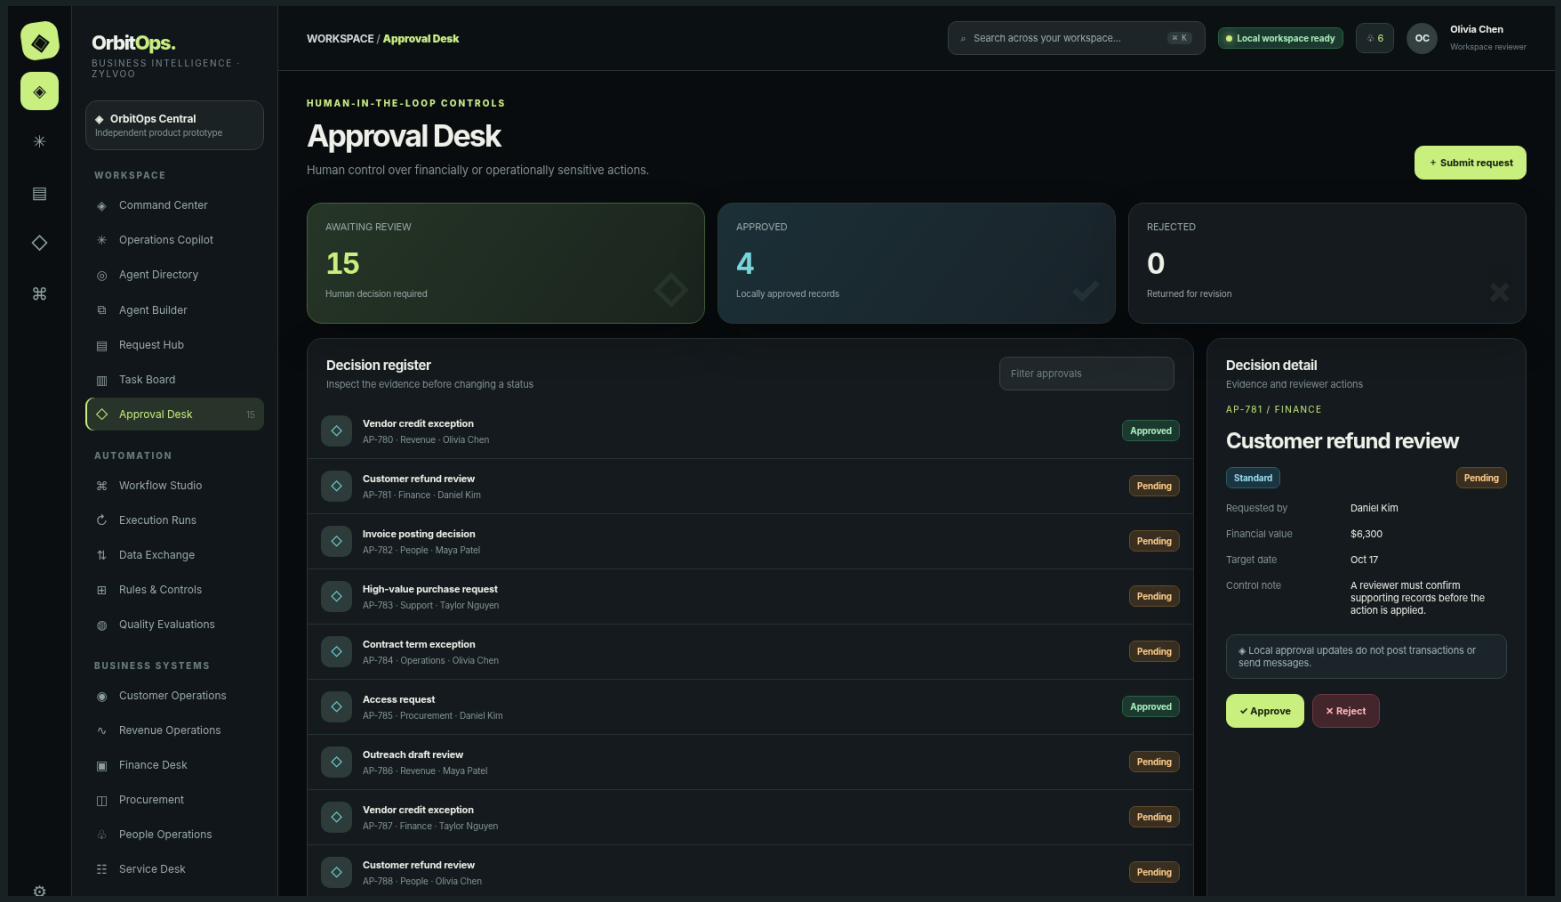

FEATURE HIGHLIGHT

Local task creation and status management across four stages.

Approval Desk

Human decision layer for sensitive actions

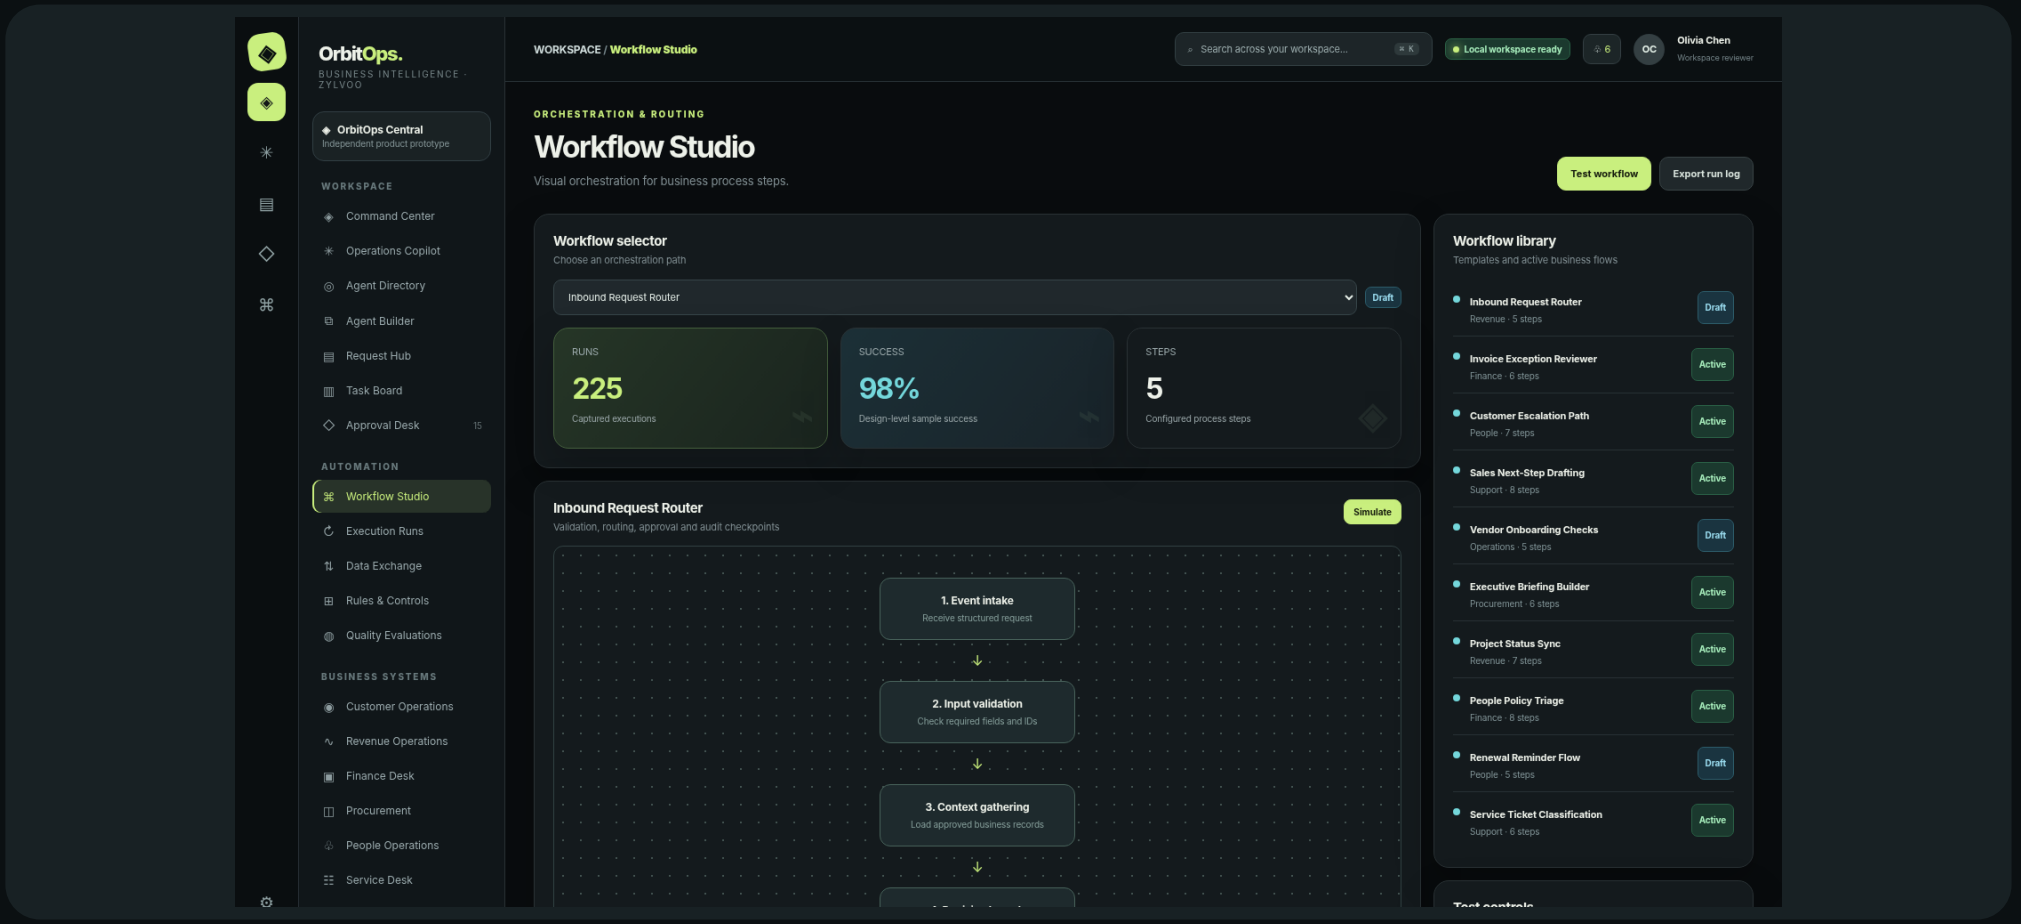

FEATURE HIGHLIGHT

Review details, approve or reject, with local audit events.

Workflow Studio

A visual operations routing and workflow environment

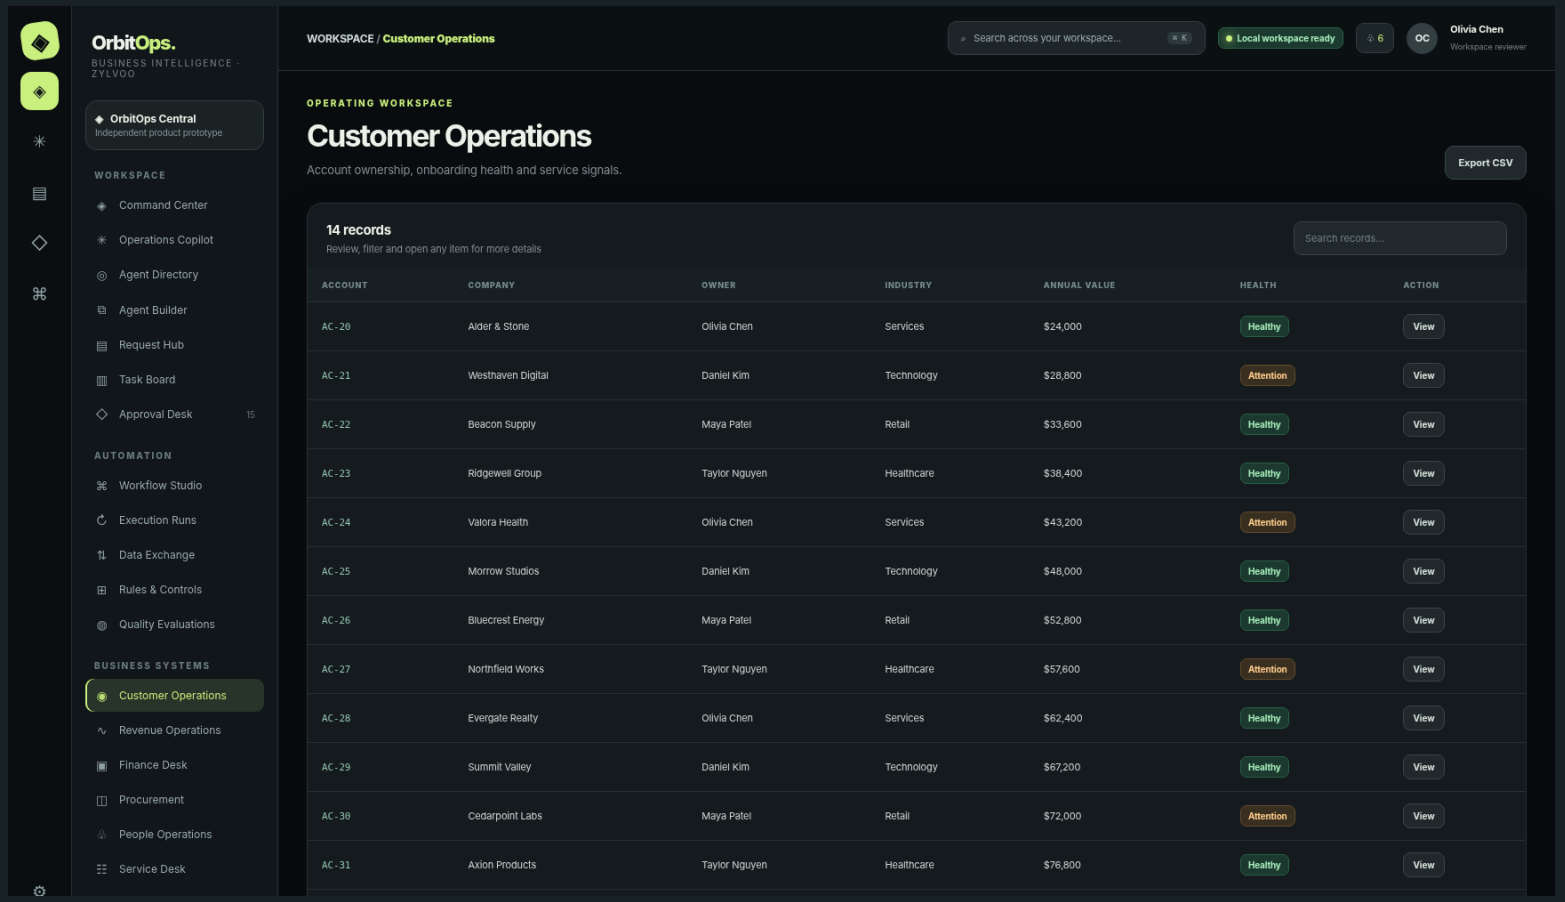

FEATURE HIGHLIGHT

Event validation, context collection, branching, human review and audit.

Customer Operations

Accounts, onboarding stage and health signals

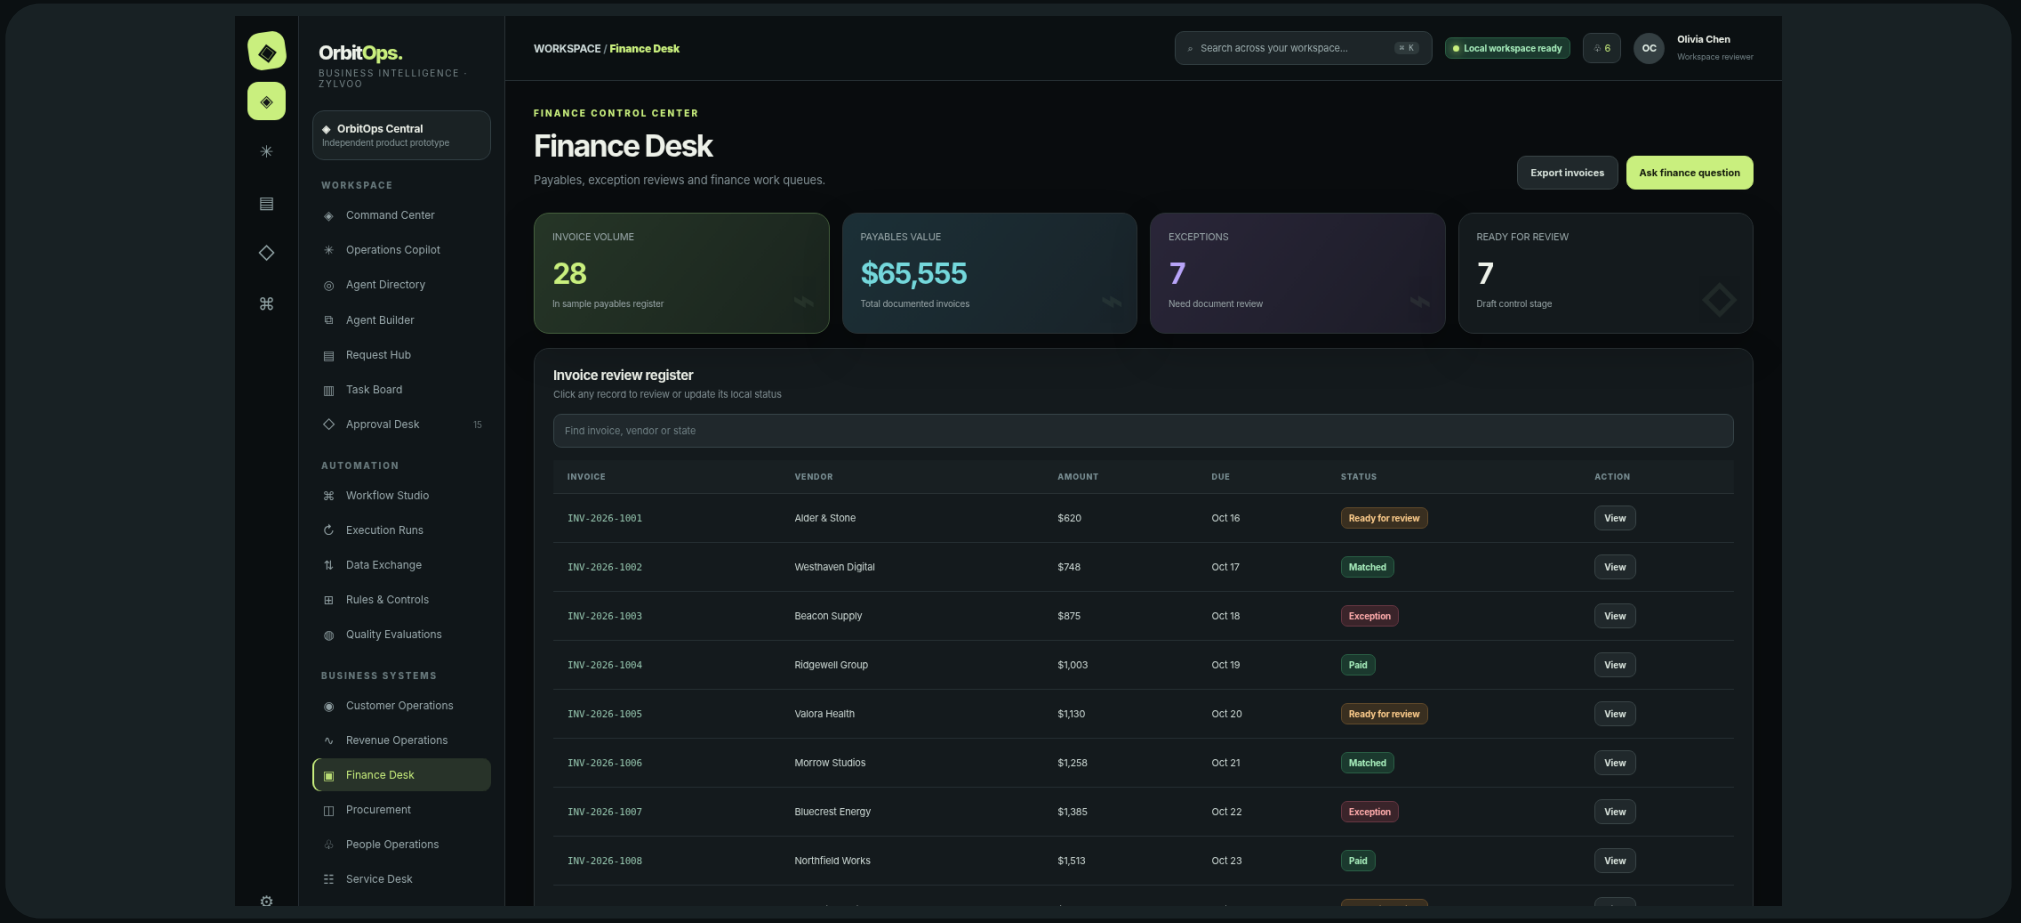

FEATURE HIGHLIGHT

Account ownership, risk indicators and linked sample records.

Finance Desk

Payables and exception-focused operational work

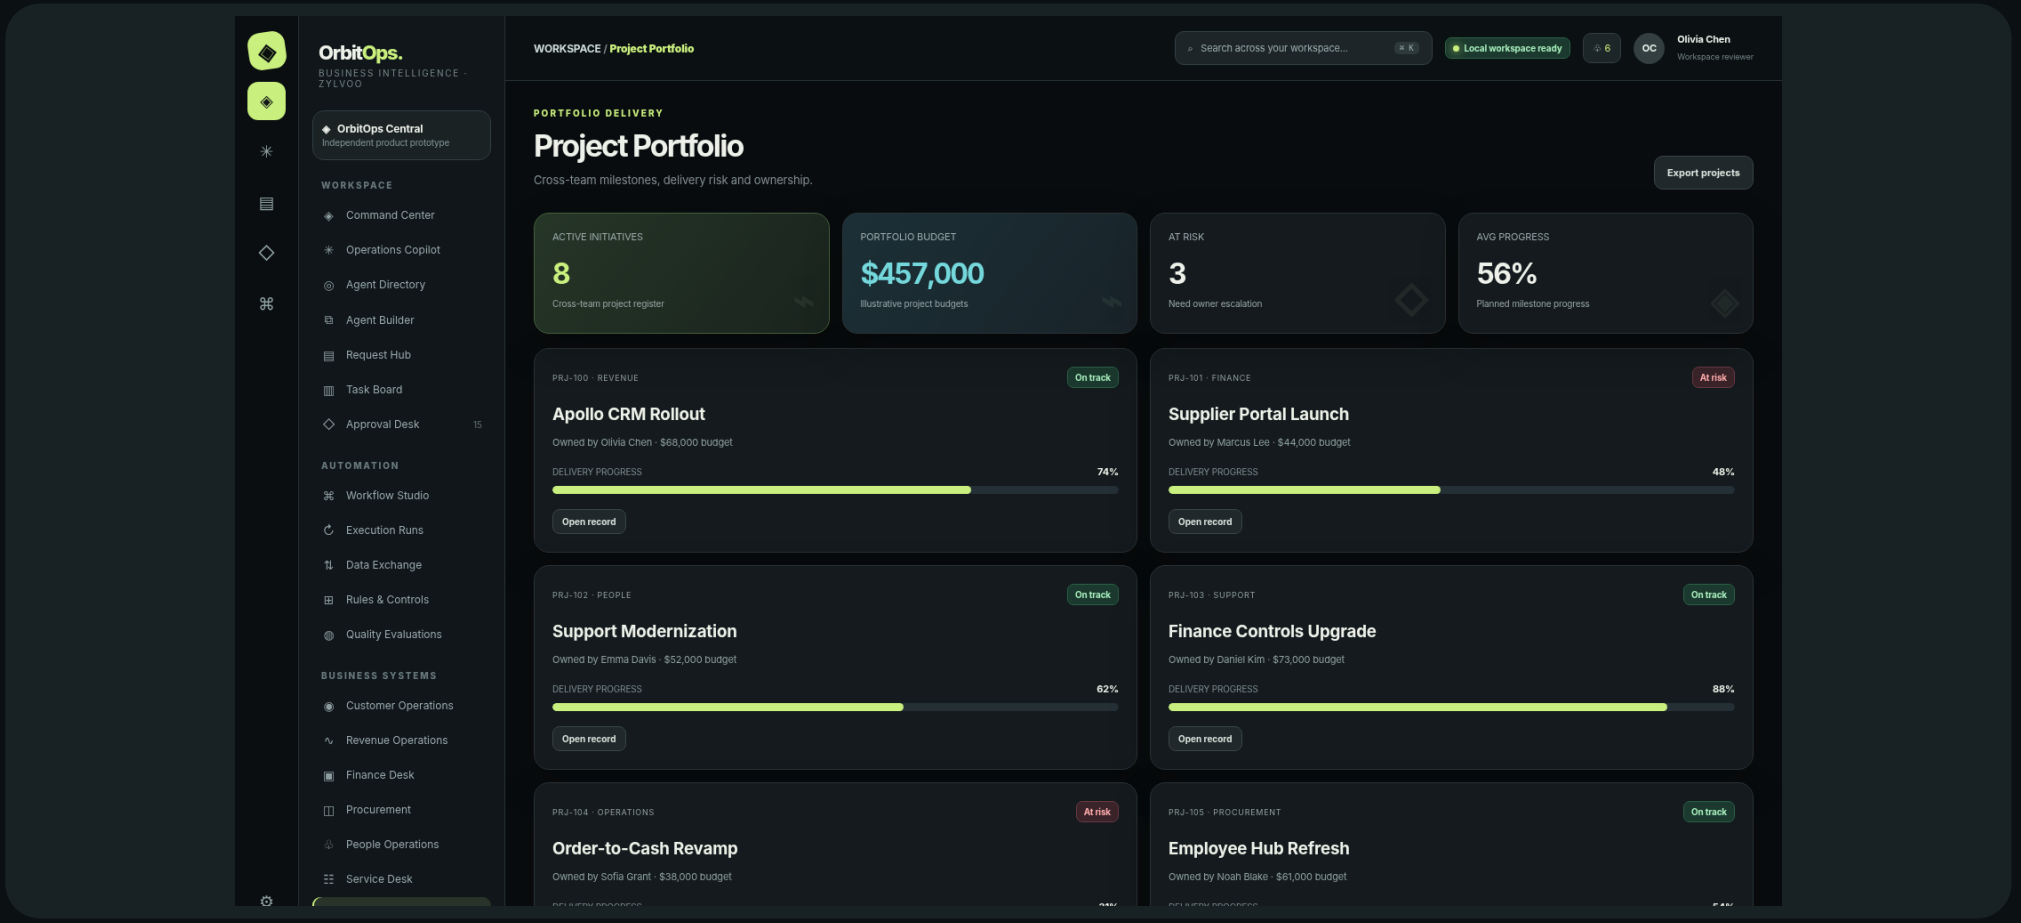

FEATURE HIGHLIGHT

Invoice review register, draft statuses, amount totals and evidence.

Project Portfolio

Milestone oversight and operational project risk

FEATURE HIGHLIGHT

Progress indicators, project ownership and escalation flags.

Executive Insights

Cross-team reporting and analytical visibility

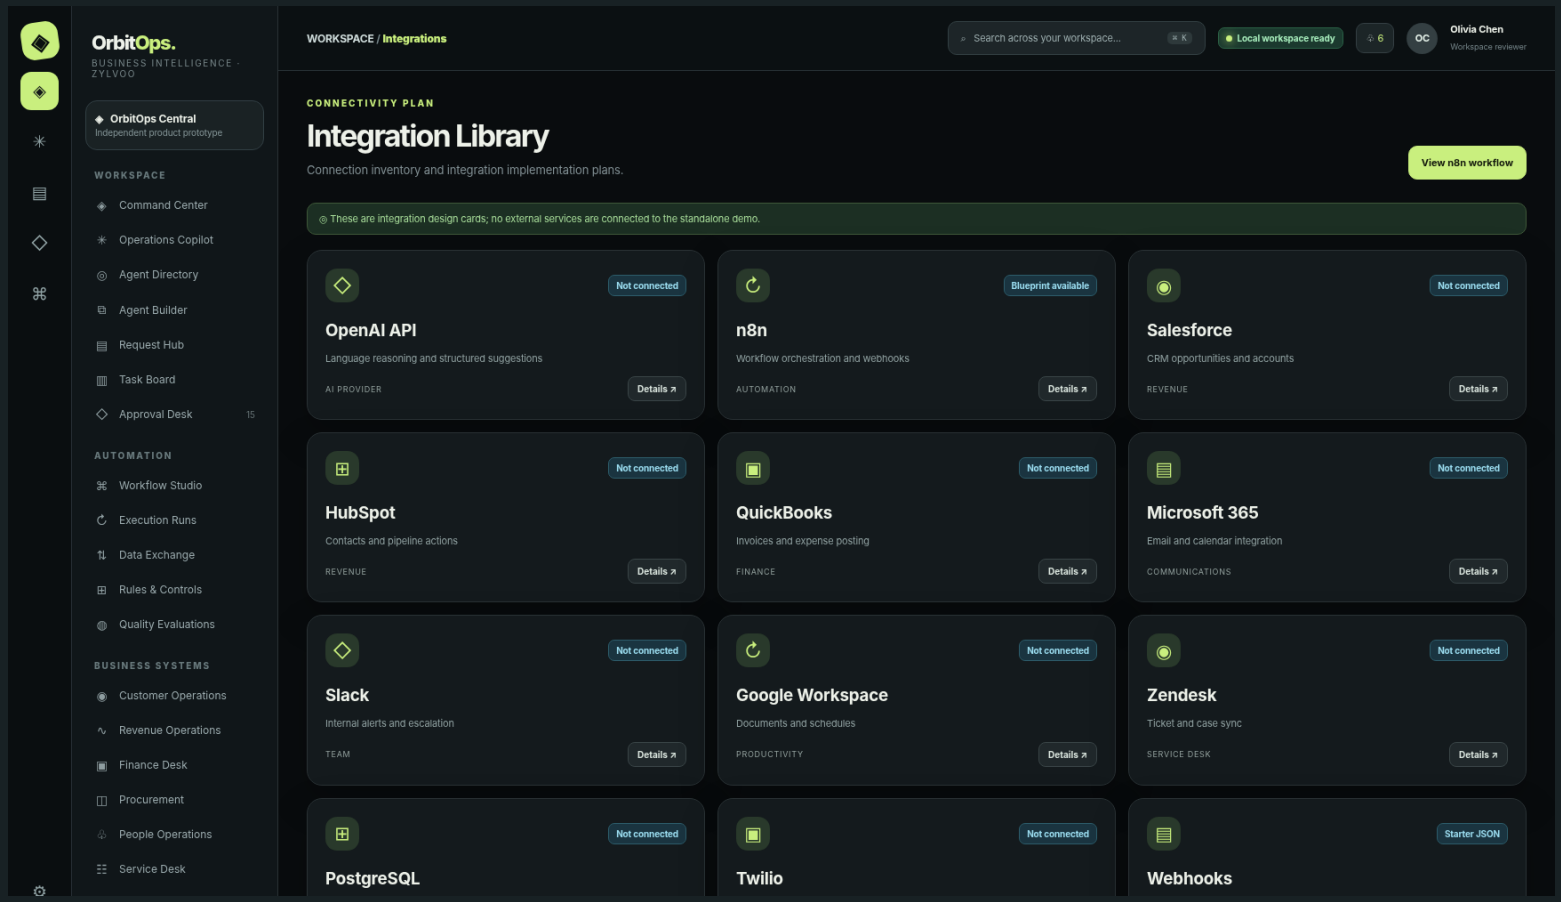

FEATURE HIGHLIGHT

Data-backed operating KPIs, review outcomes and department load.

Integrations

A documented path toward real connected systems

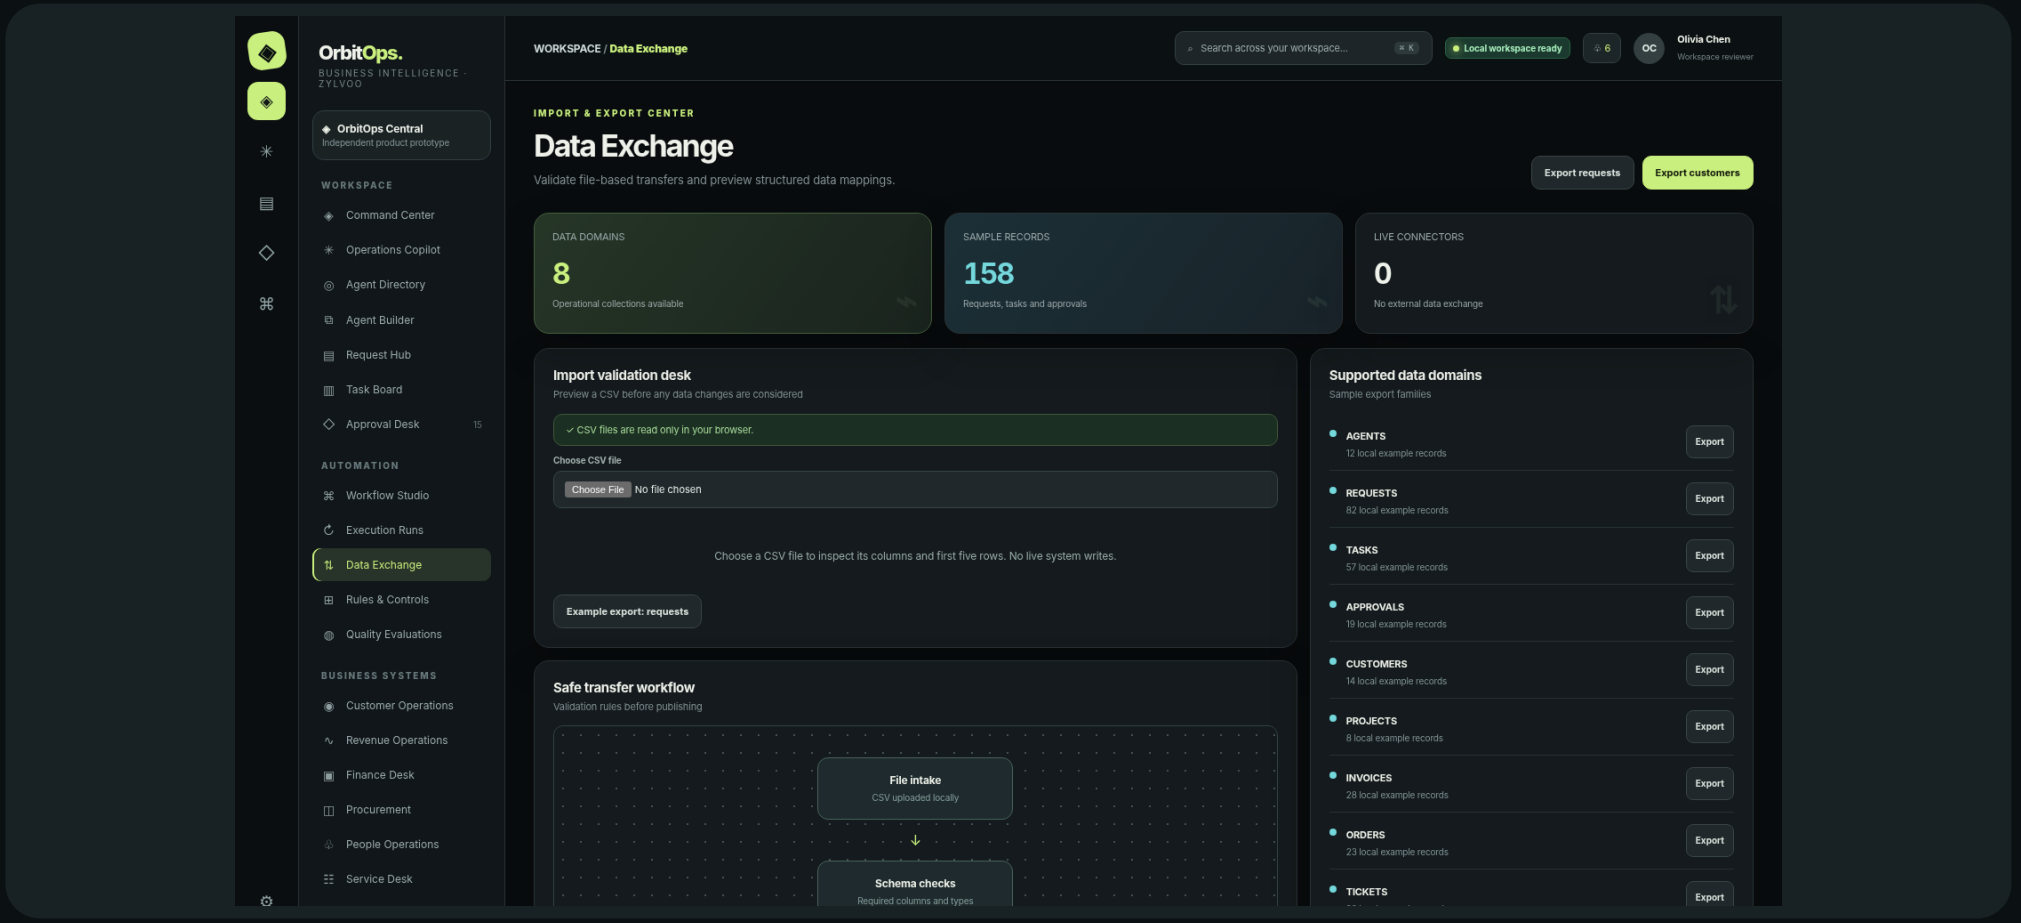

FEATURE HIGHLIGHT

Provider cards, scoped implementation plans and no false connection status.

Data Exchange

Structured CSV review and export workflow

FEATURE HIGHLIGHT

Local file preview, schema inspection and controlled export options.

Product delivery standards

Interactive browser application

Single standalone HTML with styling, routes, state and actions.

Local persistence

Edits stored in browser where local storage is available.

Tested interactions

Request, task and agent creation; approvals; workflow runs; record updates.

Structured demonstration data

Linked fictional operating records; CSV and JSON example files.

n8n starter blueprint

Importable webhook validation and review-routing scaffold; not deployed.

Portfolio media

Cover, actual app screenshots, architecture image and this case study.

What is implemented — and what is next

WORKING NOW

- ✓ 29 navigable modules
- ✓ Local operating data and linked records
- ✓ Browser actions, filters and CSV export
- ✓ Rule-based evidence-linked replies
- ✓ Human approval state changes
- ✓ Workflow run and audit simulation

PRODUCTION EXTENSIONS

- ○ Live OpenAI or other model integration
- ○ Backend database, roles and authentication
- ○ CRM, ERP, finance and email API connections
- ○ Production n8n server and real workflows
- ○ Monitoring, security reviews, deployments
- ○ Business-specific testing and support

Portfolio description guidance

Identify OrbitOps as an independent interactive product concept. Fictional sample companies, operational amounts and success rates must not be presented as results achieved for a paying customer.
